

STUDY OF THE MICROFLORA IN THE ENVIRONMENT OF
THE INDUSTRIAL Co-60 SOURCE

BY

ABD EL MONEM SAYED BASHANDY

Thesis

Submitted In Partial Fulfilment of the
Requirements For The Degree of Master
of Microbiology

IN

Microbiological Science

Under The Supervision of

Prof. Dr. MOHAMED IBRAHIM MAHMOUD
Professor of Microbiology
Microbiology Department

Prof. Dr. HAMED ROUSHDY EL KADY
Professor of Radiation Biology
Atomic Energy Authority

Dr. ZAHIRA SAYED TAWFIK
Assistant Professor of
Pharmaceutical Microbiology
National Center for Radiation
Research and Technology

Department of Microbiology
Women's College
Ain Shams University

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

وَسَاءَ أَهْوَى إِلَهِ الْبَنَاتِ إِلَهُ الْعَالَمِينَ

صَدَقَ اللَّهُ الْعَظِيمُ

SUBJECTS

<u>CONTENTS</u>	<u>Page</u>
I <u>Introduction</u>	1
II. <u>Literature Review</u>	4
1 <u>Types of Radiation</u>	4
A. Non ionizing radiation	4
B. Ionizing radiation	5
C. Dose unit of radiation	6
2 <u>Some Applications of Radiation :</u>	8
i Sterilization	8
ii Food preservation	9
iii Therapy and diagnosis	10
iv Mutation	11
A. Types of mutation	11
B. Types of mutagenic agents	13
3 <u>The Effect of Radiation on Cell Structure</u> <u>and Function.</u>	15
4 <u>The Effect of Ionizing Radiation On Microorganisms</u>	17
1. Inactivation of microbial population	18
a. Inactivation in quantitative terms	18
b. D_{10} value	19
c. D_5 value	20

SUBJECTS

	Page
2. Types of dose response curves	20
3. Mechanisms of inactivation of microorganisms	21
4. Radiation effects on molecules of importance in biological systems	23
a. Involvement of DNA	23
b. Involvement of ribonucleic acid (RNA)	26
c. Involvement of enzymes	26
d. Mechanism involved in spore resistance	28
5. Difference in resistance between species to γ -irradiation	28
5. <u>The Environmental Factors Affecting the Rate of Destruction of Microorganisms by Radiation</u>	32
1. Pre-irradiation environment	32
2. Suspending media	33
3. Temperature	33
4. Moisture	34
5. Gas atmosphere	35
6. Radioprotecting and radiosensitizing agents	37
6. <u>Microbial Inactivation of Antibiotics</u>	39

	Page
III. <u>Materials and Methods</u>	41
A. <u>Media</u>	41
1. Media used for recovery and viable count determination.	41
2. Media used for identification of bacteria	42
3. Media used for preparation of test pieces	45
4. Media used for studying antibiotic inactivation.	45
5. Reagents.	45
B. <u>Isolation of microorganisms from water of pool shielding the industrial Co-60 source.</u>	48
1. Microbial techniques.	49
2. Irradiation Methods.	52
a. Wet irradiation.	53
b. Dry method.	54
C. <u>Study of the inactivation mechanisms of some antibiotics by the isolated radioresistant strains.</u>	55
1. Susceptibility test to different antibiotics.	55
2. Degradation of antibiotics by the radioresistant mutant strains.	56
a. High performance liquid chromatography technique.	57
b. Study of the microbiological activity of the antibiotics.	58

	Page
IV. RESULTS	59
A. <u>Isolation of bacterial strains from the pool water sheilding the Co-60 source</u>	60
1. Values of counts of pool water and tap water .	60
2. Types of bacterial colonies isolated from pool water and tap water.	60
B. <u>Response of the isolated strains to different doses of γ-irradiation.</u>	69
1. Response of the isolated strains to γ -irradiation in wet state.	69
2. Response of the isolated strains to γ -irradiation in dry state.	82
C. <u>Inactivation of several antibiotics by the studied radioresistant strains.</u>	94
1. Determination of the antibiotics susceptibility test for the studied isolates.	94
2. Breakdown of the antibiotics carbenicillin and cefatrexyl by some of the studied resistant strains using high performance liquid chromatography and bioassay technique .	101
2. a. H.P.L.C. technique	
1. H.P.L.C. analysis for carbenicillin .	101
2. H.P.L.C. analysis for cefatrexyl .	109

	Page
2.b. Microbiological assay	114
i. Microbiological assay for carbenicillin and its related products.	114
ii. Microbiological assay for cefatrexyl and its related products.	114
v. DISCUSSION.	117
VI. SUMMARY .	134
VII. REFERENCES .	140

LIST OF TABLES

	Page
Table (1)	.
The average values of viable counts of pool water.	52
Table (2)	
Biochemical characters of <u>Bacillus firmus</u> and some isolated strains from pool water and tap water.	83
Table (3)	
Biochemical characters of <u>Bacillus megaterium</u> and some isolated strains from pool water and tap water.	84
Table (4)	
Biochemical characters of <u>Bacillus laterosporus</u> and some isolated strains from pool water and tap water.	85
Table (5)	
Biochemical characters of <u>Micrococcus luteus</u> and some isolated strains from pool water and tap water.	66
Table (6)	
Biochemical characters of <u>Micrococcus roseus</u> and some isolated strains from pool water and tap water.	67
Table (7)	
Frequency of different species isolated from pool water.	68

Table (8)

Effect of doses of γ -irradiation on <u>Bacillus firmus</u> isolated from pool water and tap water in wet state	71
--	----

Table (9)

Effect of doses of γ -irradiation on <u>Bacillus megaterium</u> isolated from pool water and tap water in wet state.	73
---	----

Table (10)

Effect of doses of γ -irradiation on <u>Bacillus laterosporus</u> isolated from pool water and tap water in wet state.	77
---	----

Table (11)

Effect of doses of γ -irradiation on <u>Micrococcus luteus</u> isolated from pool water and tap water in wet state.	99
--	----

Table (12)

Effect of doses of γ -irradiation on <u>Micrococcus roseus</u> isolated from pool water and tap water in wet state.	81
--	----

Table (13)

D ₁₀ values of bacterial isolates of pool and tap water (in wet state).	83
--	----

Table (14)

Effect of doses of γ -irradiation on <u>Bacillus firmus</u> isolated from pool water and tap water in dry state.	85
---	----

Table (15)

Effect of doses of γ -irradiation on Bacillus
magaterium isolated from pool water and tap water in
dry state. 85

Table (16)

Effect of doses of γ -irradiation on Bacillus laterosporus
isolated from pool water and tap water in dry state. 87

Table (17)

Effect of doses of γ -irradiation on M. luteus
isolated from pool water and tap water in dry state. 89

Table (18)

Effect of doses of γ -irradiation on Micrococcus roseus isolated
from pool water and tap water in dry state. 91

Table (19)

D₁₀ values of bacterial isolates of pool water and
tap water (in dry state).

Table (20)

Antibiotic sensitivity of B. firmus of pool water and
tap water. 86

Table (21)

Antibiotic sensitivity of B. negaterium of
pool water and tap water. 97

Table (22)

Antibiotic sensitivity of B. laterosporus of
pool water and tap water. 99

Table (23)

Antibiotic sensitivity of <u>M. luteus</u> of pool water and tap water .	99
---	----

Table (24)

Antibiotic sensitivity of <u>M. roseus</u> of pool water and tap water.	100
--	-----

Table (25)

The percentage of the left over of carbenicillin and its degraded products.	103
--	-----

Table (26)

Sensitivity test for the extract of carbe- nicillin incubated with the radioresistant mutant strain <u>M. roseus</u> , <u>B. firmus</u> and <u>B. laterosporus</u> .	115
---	-----

Table (27)

Sensitivity test for the extract of cefatrexyl incubated with the radioresistant mutant strain <u>M. roseus</u> .	116
---	-----
