Head of
Ophthalmology Department

ACKNOWLEDGMENT

First of all, cordial thanks to "ALLAH" who enabled me to overcome all problems that faced me throughout the work.

*I would like to express my outmost gratitude and indebtedness to **Prof.Dr. Hussein Shaker EL-Markabi**, Prof. of Ophthalmology, Faculty of Medicine, Ain-Shams University , for suggesting the topic, their constructive guidance during the lay out of the work and illuminating criticism in reading the manuscript. and **Prof. Dr. Ahmed Abul-Naga**, Prof.of Ophthalmology, Faculty of Medicine, Ain-Shams University,for constructive guidance, illuminating criticism in reading the manuscript and advice.*

*My grateful thanks are due to **Dr. Khaleed AL-Tagory**, Lecturer of Ophthalmology, Faculty of medicine, Ain-Shams University, for his advice and encouragement.*

Finally, my sincere thanks are due to the staff members of Ophthalmology Department, Faculty of Medicine, Ain Shams University, for their help and cooperation.

CONTENTS

- Introduction and aim of the work	1
CHAPTER I	
- Anatomy.....	3
I - Anatomy of the retina	3
11-Anatomy of the vitreous.....	13
CHAPTER II	
- Definition of Giant Retinal Tear.....	17
CHAPTER III	
- Old Methods in the Management of Giant Retinal Tears	23
CHAPTER IV	
- Physical and Chemical Properties of Perfluorocarbon Liquids.....	33
CHAPTER V	
- Surgical Techniques.....	39
CHAPTER VI	
- Complications of Perfluorocarbon Liquids....	67
CHAPTER VII	
- Advantages of Perfluorocarbon Liquids.....	80
- Summary and Conclusion.....	83
- References.....	89
- Arabic Summary.	

LIST OF TABLES

Table 1: Chemical formula and physical properties of perfluorocarbon liquids used in vitreo retinal surgery.	33
Table 2 : Force of tamponade exerted by various substitutes.	34

LIST OF FIGURES

Fig.1 : Normal fundus.	10
Fig.2 : Giant retinal tear.	17
Fig.3 : Superior giant retinal tear.	22
Fig.4 :Preoperative ophthalmoscopic examination of patient with upper giant tear is ideally performed with patient on tilting table.	25
Fig.5: Preoperative examination of superior giant retinal tear with an inverted retinal flap.	25

Fig.6: Circumfrential scleral buckle.	40
Fig.7: The basal vitreous gel is removed using deep scleral depression.	43
Fig.8: A 20-gauge microsurgical instrument .	47
Fig.9: Injection of perfluorocarbon liquid 1mm above the optic disc.	49
Fig.10: Dissection within the vitreous base.	49
Fig.11: The perfluorocarbon liquid injected over the edge of the retinal tear.	49
Fig.12: The flute needle with silicone tip is placed near the edge of the tear to aspirate saline and subretinal fluid completely before removing the perfluorocarbon liquid.	52
Fig.13: A slow and deliberate fluid-air exchange is done.	52

- Fig.14:Endophotocoagulation can be applied through the
perfluorocarbon liquid to all retina. 56
- Fig.15: Schematic drawing showing a procedure for complete
removal of perfluorocarbon liquid. 59
- Fig.16: Removal of perfluorocarbon liquid by passive
aspiration using flute needle. 60
- Fig. 17: Slipping of small perfluorocarbon bubbles under the
retina. 68
- Fig.18: Fragmentation of the perfluorocarbon bubble by
a forceful stream of balanced salt solution which
disturbe the anterior eniscus of the perfluorocarbon
bubble. 72
- Fig. 19: Fragmentation of the perfluorocarbon bubble caused
by direct contact between the infusion cannula and the
anterior meniscus of the perfluorocarbon bubble. 72
