### NUTRITIONAL STUDIES ON FISH PERFORMANCE UNDER INTENSIVE PRODUCTION SYSTEMS

By

**TAREK ABO EL-MAKAREM ALI**  
B.Sc. Agriculture (Animal Production),  
Ain Shams University, 1990.

This thesis for M.Sc. degree has been approved by:

**Prof. Dr. S. I. M. Ghoneim**.....  
Dean of Faculty of Fish Resources, Suez canal University.

**Prof. Dr. H. M. Khattab**.....  
Prof. of Animal Production Faculty of Agriculture,  
Ain Shams University.

**Prof. Dr. Mohamed A. El-Ashry**.....  
Prof. of Animal Production Faculty of Agriculture,  
Ain Shams University.

Date of examination: 4 \ 3 \ 1996.

**NUTRITIONAL STUDIES ON FISH PERFORMANCE  
UNDER INTENSIVE PRODUCTION SYSTEMS**

By

**TAREK ABO EL-MAKAREM ALI**

B.Sc. (Animal Production Department), Faculty of Agriculture,  
Ain Shams University, 1990.

Under the Supervision of :-

**Prof. Dr. Mohamed A. El-Ashry**

Prof. of Animal Nutrition, Fac. of Agric.,  
Ain Shams Univ.

**Dr. Salwa M. Hamdy**

Associate Prof. of Animal Nutrition, Fac. of Agric.,  
Ain Shams Univ.

## **ACKNOWLEDGMENT**

The student wishes to greatly indebted to Dr. M.A. EL-Ashry, Professor of Animal Nutrition, Department of Animal production, Faculty of Agriculture, Ain Shams University, for his supervision and interest guidance throughout the progress of this study.

Deep gratitude is due to Dr. Salwa M. Hamdy, Associate Prof. of Animal Nutrition, Department of Animal production, Faculty of Agriculture, Ain Shams University and Dr. M. F. Osman, Assistant Prof. of Fish Nutrition, in the same faculty, for their valuable guidance. Also my extremely grateful for solution all the problems and for their advice and kind encouragement through this work.

The student would like to take this opportunity to express his warm appreciation all those who have participated in this work including who have commented on, and pointed out errors in, the original reports, and to anybody helped us throughout this work.

## ABSTRACT

**Tarek Abo El-Makarem Ali . Nutritional Studies on Fish Performance under Intensive Production Systems . Published for Master of science- Ain Shams University, Faculty of Agriculture, Department of Animal Production, 1996.**

*Tilapia nilotica* (Phenotypically *O. niloticus*) with an average size of 30 gram grow at two experiments were reared for 155 and 98 days in glass aquaria under recirculating water system at densities of 100, 200, 300 and 400 fish/m<sup>3</sup> and 200, 300, 400 and 500 fish/m<sup>3</sup> for the first and second experiment, respectively. At stocking densities of 100, 200, 300 and 400 fish/m<sup>3</sup> and feeding levels of 1 and 2% from w<sup>0.8</sup> fish fed pelitized diet containing 30% protein and 4366.2 kcal GE/kg. At the second experiment fish fed two feeding levels 1.5% and 1.7% of diet containing 30% protein and 4456.6 kcal GE/kg. The first experiment was conducted to determine the suitable feeding level according to metabolic body size (w<sup>0.8</sup>) and suitable stocking density under the recirculating water system described in this thesis.

The second experiment was conducted to determine the effects of stocking density, feeding level, and their interactions on growth parameters, nutritional parameters and water quality measurements.

The results indicated that net yield increased with increasing density level. Although the growth parameters and feed utilization efficiency were inversely related to increasing stocking densities.

The results of the two experiments showed that, mortality rate was not density dependent. Stocking levels did not influence the chemical composition of the fish in the two experiments.

The lowest cost for producing 1 kg fish gain was observed at the density of 200 fish/m<sup>3</sup> at first feeding level in the first experiment. The lowest cost in the second experiment was observed at the density of 200 fish/m<sup>3</sup> at the first feeding level.

**Key words:** *O. niloticus*, Feeding level , Stocking density

Water quality under closed systems.
