

Finite Element Analysis Of Steel Frames Including Cladding Stiffness

By

Samir Mekheil Youssef

B.Sc., 1983 Civil Engineering Department
Faculty Of Engineering Ain Shams University

A Thesis

Submitted In Partial Fulfillment

For The Requirement Of The Degree Of Master Of Science
In Structural Engineering

Supervised By

Dr. A. Watson Bishara

Prof. Of Theory Of Structures
Faculty Of Engineering Ain Shams University

Dr. Mostafa K. M. Zidan

Prof. Of Theory Of Structures
Faculty Of Engineering Ain Shams University

51279

Statement

This dissertation is submitted to Ain Shams University for the degree of Master of Science in Structural Engineering.

The work included in this was carried out by the author in the Department of Structural Engineering Ain Shams University , from Oct. 1989 to Feb. 1995 .

No part of this thesis has been submitted for a degree or a qualification at any other University or Institution.

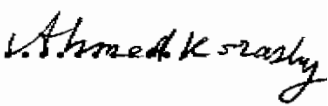

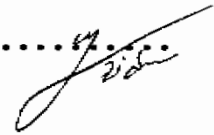

Date : 25/2/1995

Signature: 

Name : Samir M.Youssef

EXAMINERS COMMITTEE

Name and Affiliation	Signature
1- Prof. Dr. SABRY SAMAAH MEKHAEL Professor of Structural Engineering Faculty of Engineering Cairo University.	
2-Prof.Dr. ABD EL-MONEM AHMED KORASHY Professor of Structural Engineering Faculty of Engineering Ain Shams University.	
3-Prof. Dr. ABD EL-RAOUF WATSON BESHARA Professor of Structural Engineering Faculty of Engineering Ain Shams University.	
4-Prof.Dr. MOSTAFA K. M. ZIDAN Professor of Structural Engineering Faculty of Engineering Ain Shams University.	

ACKNOWLEDGMENT

The author wishes to introduce his favourite thanks and sincere gratitude to Dr. Abdel Raouf Watson Beshara. professor of structural analysis, Structural Engineering Department, Faculty of Engineering, Ain Shams University, Cairo, for his help and valuable guidance throughout the research.

Also indebted to Dr. Mostafa K. M. Zidan professor of Structural Engineering, Ain Shams University, Cairo for his supervision, comments and kind help in carrying out this work.

To

MY MOTHER and MY FATHER .

Chapter 11
1.1 Introduction.1
1.2 Historical background.3
1.3 Principles of diaphragm action.3
1.4 Arrangement of sheeting.7
1.5 Types of buildings incorporating diaphragm action in its design.7
1.5.1 Structures whose stability is wholly dependent on diaphragm action.9
1.5.2 Structures whose stability is partly dependent on the diaphragm action.9
1.6 The basic shear panel.10
1.7 Necessary condition for stressed skin action.13
1.8 Flexibility and strength of basic shear panel.15
1.8.1 Testing and experimental formulas16
1.8.2 Design expression18
1.9 Expressions for diaphragm flexibility (cantiliver panel , sheeting perpendicular to span)18
1.9.1 Flexibility due to distortion of the sheeting profile.19
1.9.2 Flexibility due to shear strain in the sheet22
1.9.3 Flexibility due to movement at the sheet to perpendicular member fasteners23
1.9.4 Flexibility due to movement in seams24
1.9.5 Flexibility due to movement in the sheet to	

parallel member fasteners.24
1.9.6 Flexibility due to movement at the perpendicular member to parallel member (purlin to rafter) connections.25
1.9.7 Flexibility due to axial strain in the edge members.26
1.9.8 Summation of component flexibilities26
1.10 Simple elastic calculation methods for structures taking the diaphragm action into account.27
1.10.1 Diaphragm action with pin jointed frames27
1.10.2 Diaphragm action with rigid jointed frames.28
1.10.3 Flexibility of a frame.29
1.10.4 Principles of diaphragm action with rigid jointed frames.31
1.10.5 Rectangular portal frames32
1.10.6 Pitched roof portal frames33

Chapter "2"

Previous works and uses of clad in structures .

2.1 Introduction.35
2.2 Bryan and Davies theory.35
2.2.1 Basic assumptions36
2.2.2 Diaphragm flexibility36
2.2.3 Diaphragm strength.37
2.3 Easley's theory38
2.4 Development of Easley's theory.40
2.5 Types of buildings for stress skin design.42
2.5.1 Type 1. Diaphragms action alone42

2.5.2	Type 2. Diaphragms action in conjunction with rigid jointed frames.42
-------	--	---------

Chapter 3

3.	Finite element method and computer program.44
3.1	Introduction.44
3.2	Panel stiffness matrices.45
3.3	Orthotropic rectangular plate element.46
3.4	Definitions of characteristics of orthotropic element.56
3.4.1	Definition of E_x56
3.4.2	Definition of E_y58
3.4.3	Definition of ν_{xy} and ν_{yx}58
3.4.4	Definition of G_{xy}60
3.5	Fastener element.61
3.6	Frame element stiffness.65
3.6.1	Abstract.65
3.6.2	Introduction65
3.6.3	Derivation of the frame element stiffness.66
3.6.4	Forces corresponding to $U_i = \text{Unit}$68
3.6.5	Forces due to $V_i = V_j = \text{Unit}$70
3.7	Sign convention for the clad steel structure program.77
3.8	Listing of the clad steel structure program considering frame depth.78

Chapter 4

Effect of cladding and frame depth on the analysis of steel structures.

4.1	Introduction99
4.2	Properties of the one bay structure100
4.3	Properties of two bays model.103
4.4	Effect of frame section depth on the behaviour of structure.105
4.4.1	One bay model results and discussion.106
4.4.2	Two bays model results and discussion.112
4.5	Parametric study of the one bay model considering the frame depth effect.118
4.5.1	Effect of diaphragm stiffness.118
4.5.1.1	Results and discussion.119
4.5.2	Effect of spacing between frames.125
4.5.2.1	Results and discussion.125
4.5.3	Effect of the relative moment of inertia130
4.5.3.1	Results and discussion.130

Chapter " 5 "

	Summary and conclusion136
5.1	Introduction.136
5.2	Conclusion.137
5.3	Future work.138
	References.139
