## ACKNOWLEDGMENT

---

I am greatly indebted to my supervisor Prof. Dr. **Ibrahim ElMitwally Samaha**, Professor and Chairman of the Department of Obstetrics and Gynecology, Ain Shams University, who allowed me to pursue this topic, supervised the study and continued to offer help far beyond the call of duty.

Likewise, I am deeply indebted to Prof. Dr. **Mounir Mohamed Fawzy El-Hao**, Professor of Obstetrics and Gynecology, Ain Shams University, for his kind supervision, tremendous assistance, continuous guidance and enthusiastic support.

I wish to express my deepest gratitude and sincere appreciation to Dr. **Hisham Mohamed Fathy Mahmoud**, Assistant Professor of Obstetrics and Gynecology, Ain Shams University, for offering me much of his time and experience throughout the whole work.

I cannot also forget to offer my thanks to the member staff of The Laparoscopic Surgery Unit (Department of Obstetrics and Gynecology, Faculty of Medicine, Ain Shams University) especially the late Dr **Ibrahim Atef**, for their tremendous help during the operative part of this work, for their effective efforts and help.

In research, one does not only need the assistance of one's superiors, but also the help of one's family. As such, I must bow in respect to my parents for their tolerant support throughout this work.

At last, but not least, my heart felt thanks to all the patients participated in this work, I wish it would be of benefit for all the patients in the future.

## List of Tables

No	Title	Page
1	Causes of urinary incontinence.	40
2	Reversible Causes of urinary incontinence.	48
3	Age descriptive statistics and analytical difference between both studied groups.	156
4	Duration of disease descriptive statistics and analytical difference between both studied groups.	157
5	Weight descriptive statistics and analytical difference between both studied groups.	158
6	Parity descriptive statistics and analytical difference between both studied groups.	159
7	Previous laparotomy frequency and analytical difference between both studied groups.	160
8	Prolapse frequency and analytical difference between both studied groups.	162
9	Analgesia frequency and analytical difference between both studied groups.	164
10	Complications frequency in the laparoscopy group.	166
11	Hemoglobin descriptive statistics and analytical difference between both studied groups	168
12	Duration of operation descriptive statistics and analytical difference between both studied groups.	170
13	Postoperative hospital stay descriptive statistics and analytical difference between both studied groups.	172
14	Duration of operation descriptive statistics and analytical difference between patients with and without previous laparotomy in the laparoscopy group.	174
15	Duration of operation descriptive statistics and analytical difference between patients with and without previous laparotomy in the open surgery group.	174
16	Correlation between weight and duration of operation in both studied groups	175

17	Subjective cure frequency and analytical difference between both studied groups.	175
18	Urodynamics preoperative data in Laparoscopy group.	177
19	Urodynamics preoperative data in Open surgery group.	177
20	Urodynamics one-day postoperative data in Laparoscopy group.	178
21	Urodynamics one-day postoperative data in Open surgery group.	178
22	Urodynamics one-month postoperative data in Laparoscopy group.	179
23	Urodynamics one-month postoperative data in Open surgery group.	179
24	Comparison between urodynamics parameters in each of the studied groups as regards difference between preoperative and one day postoperative findings.	180
25	Comparison between urodynamics parameters in each of the studied groups as regards difference between preoperative and one month postoperative findings.	184
26	Comparison between urodynamics parameters in each of the studied groups as regards difference between one day and one month postoperative findings.	188
27	Descriptive and analytical statistics of the difference in volume of first sensation in both groups.	190
28	Descriptive and analytical statistics of the difference in cystometric capacity in both studied groups.	190
29	Descriptive and analytical statistics of the difference in maximum detrusor activity in both studied groups.	191
30	Descriptive and analytical statistics of the difference in voiding time in both studied groups.	192
31	Descriptive and analytical statistics of the difference in flow time in both studied groups.	192
32	Descriptive and analytical statistics of the difference in time to maximum flow in both studied groups.	193
33	Descriptive and analytical statistics of the difference in maximum flow rate in both studied groups.	193
