

**IS TRANSESOPHAGEAL ECHOCARDIOGRAPHY
ALONE IS SUFFICIENT TO EVALUATE MITRAL
VALVE PROSTHESES ?**

THESIS

Submitted in Partial Fulfillment of Master Degree in
" **Cardiology** "

To My Mother

ACKNOWLEDGMENT

I would like to express my deep appreciation and gratitude to Prof. Dr. Said Khalid, Assistant Professor of Cardiology, Ain Shams University, for his supervision of this thesis. He provided me with meticulous guidance and illuminating remarks throughout this work, together with giving me much of his valuable time.

I am greatly indebted to Dr. Khlid El Meniawy, Lecturer of Cardiology, Ain Shams University, for his scientific guidance, fruitful discussion, and continuous assistance during this work.

No words express my feeling and respect to Dr. Taher El Kady, Follow of Cardiology in the National Heart Institute for his continuous guidance, unlimited help and support throughout the whole work.

Yehia Abd El Moniem

LIST OF CONTENTS

	Page
Introduction	1
Aim of the Work	2
Review of literature	3
- Types of prosthetic cardiac valves	3
- Mechanical prostheses	4
- Caged ball prostheses	4
- Caged disc prostheses	5
- Tilting-disc prostheses	6
- Bileaflet tilting-disc prostheses	7
- Durability and thrombogenicity	8
- Tissue valves	9
- Homografts	9
- Heterografts	10
- Selection of an artificial valve	13
- Special situations	14
- Hemodynamics of mitral valve replacement	18
- Assessment of patients with prosthetic valve	21
- Clinical evaluation	21
- Echocardiographic assessment	26
* M-Mode and 2-D	26
* Doppler	34
* Color Doppler	47
* TEE	48
- Cardiac catheterization	56
Patients and methods	58
Results	64
Discussion	83
Summary	87
Conclusion	88
Abstract	89
References	90
Arabic summary	- -

LIST OF TABLES

	Page
Table (1) : Commonly used prosthetic valves	3
Table (2) : Phonocardiographic findings of normal prosthetic valves	23
Table (3) : M-mode evaluation of mechanical valve prosthesis	27
Table (4) : Value of echocardiography in evaluation of bioprosthetic prosthetic valves	32
Table (5) : Normal function of mitral valve prostheses by Doppler echocardiography	45
Table (6) : Abnormal function of mitral valve prostheses by Doppler echocardiography	46
Table (7) : Echocardiographic measurements	65
Table (8) : Descriptive data of the patients group	66
Table (9) : Correlation between TTE and TEE regarding M.V.A. and PG (Maximum and Mean)	66
Table (10) : Prosthetic mitral valves; intracardiac masses	73
Table (11) : Left atrial spontaneous echo contrast	73
Table (12) : Mitral regurgitation	80
Table (13) : Grading of M.R.	81
Table (14) : The relation between degree of M.R. detected by TEE and LV systolic function	81

LIST OF FIGURES

	Page
Figure (1) : Recommended strategy for peripartum anti-coagulation therapy	15
Figure (2) : Mean value of M.V.A. measured by both transthoracic and transesophageal echo	67
Figure (3) : Mean value of P.G. maximum measured by both transthoracic and transesophageal	68
Figure (4) : Mean value of P.G. mean measured by both transthoracic and transesophageal echo	69
Figure (5) : Significant positive correlation between transthoracic and transesophageal MVA in the studied cases.	70
Figure (6) : Significant positive correlation between transthoracic and transesophageal P.G. max in the studied cases	71
Figure (7) : Significant positive correlation between transthoracic and transesophageal P.G. mean in the studied cases.	72
Figure (8) : 2-D and Doppler echocardiography transthoracic versus transesophageal echo	74
Figure (9) : Severity of M.R. by Doppler echocardiography	82

LIST OF PLATES

	Page
Plate (1) : Transesophageal echocardiographic 4 chamber view showing a vegetation on a mitral valve prosthesis	75
Plate (2) : Transesophageal echocardiographic 4 chamber view showing left atrial thrombus	76
Plate (3) : Transesophageal echocardiographic 4 chamber view showing left atrial appendage thrombus	77
Plate (4) : Transesophageal echocardiographic 4 chamber view showing tissue ingrowth	78
Plate (5) : Transesophageal echocardiographic 4 chamber view showing spontaneous left atrial contrast	79
