NEW TECHNIQUE FOR THE MANAGEMENT OF PORTAL HYPERTENSION IN DOGS

Thesis submitted for partial

Fulfillment of M.D. degree in General Surgery

By

Hisham Ahmed Mohamed

Master Degree of Surgery

Ain Shams University

Under supervision of

Prof. Alaa El Din Ismail

Prof. of General Surgery

Ain Shams University

Prof. Ahmed Kamal El Durry

Prof. of Radiology

Ain Shams University

Prof. Ahmed Sayed Ahmed El Sayed

Prof. in Department of Surgery,

Anesthesiology and Radiology

Faculty of Veterinary Medicine-Cairo University

2000

B V o o a

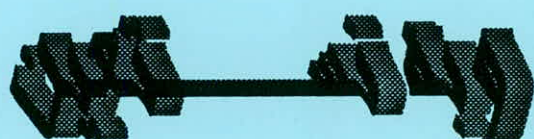

Table of Contents

	Page
I Introduction.	1
II Aim of the work.	2
III Review of literature:	3
<i>-Anatomy of the portal system.</i>	3
<i>-Pathology of portal hypertension.</i>	20
<i>-Diagnosis of portal hypertension.</i>	30
<i>-Treatment of [portal hypertension.</i>	38
IV Subject and Methods.	53
V Results.	64
VI Discussion.	77
VII Summary and conclusions.	93
VIII Recommendation.	95
IX References.	96
X Arabic summary.	109

List of Tables

<u>Table</u>		<u>Page</u>
Table 1:	Causes of portal hypertension	11
Table 2:	Different types of procedure used in treatment of bleeding esophageal varices.	43
Table 3:	Comparison of various features of drugs used to decrease portal pressure in patients with acute bleeding from esophageal varices.	44,45
Table 4:	Portal pressure of the cases before and after induction of portal hypertension.	65
Table 5:	The % of increase in portal pressures after CBD ligation.	66
Table 6:	Comparison between portal pressures in the 2 occasions using sign test.	68
Table 7:	Comparison between portal pressures before CBD ligation and portal pressure after CBD ligation.	68
Table 8:	Portal pressure of the cases underwent induction of portal hypertension and after the surgical correction.	69

- Table 9: The % of decrease in portal pressures 70
after surgical correction.
- Table 10: Comparison between portal pressure 72
after CBD ligation and portal pressure
after surgical procedure using t test.
- Table 11: Comparison between portal pressures in 72
the 2 occasions using sign test.
- Table 12: Portal pressure of the cases before 73
induction of portal hypertension (control)
and after the surgical correction.
- Table 13: Comparison between portal pressures 76
before CBD ligation and portal pressure
after correction procedure.
- Table 14: Comparison between portal pressures in 76
the 2 occasions using sign test.
- Table 15: Comparison between the % of increase 76
and the % of decrease in portal pressure
using t test.

List of Figures

Figure		Page
Figure 1:	Intrahepatic vascular and of the bile duct.	4
Figure 2:	Schematic representation of hepatic structure.	7
Figure 3:	Portal vein tributaries and the sites of portosystemic anastomosis.	19
Figure 4:	Intravenous injection of xylocaine as a preoperative medication.	57
Figure 5:	Cannula inserted into the portal vein connected to saline manometer.	59
Figure 6:	Saline manometer shows the value of the normal portal blood pressure.	59
Figure 7:	The anastomosis performed between the side of the portal vein and the distal end of the transected hepatic artery.	62
Figure 8:	Comparison between normal portal pressure and induced portal hypertension two weeks after CBD ligation.	67
Figure 9:	Comparison between the induced portal hypertension two weeks after CBD ligation and the portal pressure after surgical correction.	71

Figure		Page
Figure 10:	Comparison between normal portal pressure, portal hypertension after CBD ligation and after surgical correction in all cases.	74
Figure 11:	The comparison between the % of increase and the % of decrease signifies that there is significant difference between the two values.	75
Figure 12:	Intraoperative angiography with vascular clamp applied on the portal vein distal to the anastomosis between the side of the portal vein and the end of the distal segment of the transected hepatic artery.	85
Figure 13:	Intraoperative angiogram between the side of the portal vein and the end of the distal segment of the transected hepatic artery. Radio-opaque dye was injected in the portal vein proximal to the site of the anastomosis demonstrated the patency of the anastomosis with filling of both distal portal vein and the hepatic artery.	86
Figure 14:	Lateral view of the intraoperative angiogram shows the patent side to end porto-arterial anastomosis.	87
