

The Effect of Degree of Taper, Surface Roughness and Type of Cement on Retention of Cement-Retained Implant Supported Crowns

Thesis

Submitted to Fixed Prosthodontics Department, Faculty of Dentistry Ain Shams University for Partial Fulfillment of the Requirement of Master Degree in Fixed Prosthodontics.

Presented by

Asmaa Taha Yassien Tayia

B.D.Sc. (2008)

Faculty of Dentistry, Ain Shams University

Faculty of Dentistry

Ain Shams University

(2016)

Supervised by

Dr. Tarek Salah El Din Morsy

Assistant Professor and Head of Fixed
Prosthodontics Department

Faculty of Dentistry - Ain Shams University

**Dr. Maged Mohamed Mohamed
Zohdy**

Lecturer of Fixed Prosthodontics Department
Faculty of Dentistry - Ain Shams University

(2016)

Acknowledgment

First and foremost, thanks to ALLAH, the most beneficent and the most merciful for giving me strength and ability to complete my study.

*My deepest appreciation and heartfelt thanks to my supervisor **Dr. Tarek Salah El Din Morsy**, Assistant Professor and Head of Fixed Prosthodontics Department, Faculty of dentistry, Ain Shams University, for his continuous encouragement, advice, valuable comment, effort, unlimited guidance and all the time he gave me to accomplish this study. I benefited greatly from his experience and knowledge throughout the research work. I have the honor that I worked under his supervision.*

*Deep thanks and great appreciation to **Dr. Maged Mohammed Mohammed Zohdy**, Lecturer at Fixed Prosthodontics Department, Faculty of Dentistry, Ain Shams University, for his unlimited support, help and cooperation during the work of this study. I acknowledge that, without his help I would not finish this research.*

Finally, I would like to thank all of the staff members, colleagues in fixed Prosthodontics Department, Faculty of dentistry, Ain Shams University who never decline from offering assistance and help to me during the course of this work.

Asmaa Taha

Dedication

I lovingly dedicate my thesis to.....

My Dear Parents for their endless care, love and support throughout my life.

*My Dear Husband **Sherif** for his endless encouragement and support and his lovely family.*

My Best Children, Khaled and Nada.

My Lovely Sisters, Shiamaa and Esraa.

My True Friends and Colleagues, Thanks for their encouragement and cooperation.

List of Contents

List of Tables.....	I
List of Figures.....	I I
Introduction.....	1
Review of Literature.....	4
Statement of the Problem.....	37
Aim of the study.....	38
Materials and Methods.....	39
Results.....	76
Discussion.....	91
Summary.....	102
Conclusion.....	105

List of Tables

Table No.		Page No.
1	List of the materials used in the study.	39
2	Chemical Composition of TempBond cement	42
3	Technical data of DentoTemp resin cement	45
4	Chemical composition of Acrylic resin.	47
5	Technical data of Elite HD+ Putty Soft Fast Set	48
6	Technical data of Elite HD+ Light Body Fast Set	49
7	Sample grouping	51
8	Three way-ANOVA showing the effect of different Degree of Taper, Surface Roughness and Type of cements on mean Retention Load (N)	77
9	Means and Standard Deviations (SD) of Retention Load (N) for different Degree of Taper.	79
10	Means and Standard Deviations (SD) of Retention Load (N) for different Surface Roughness.	81
11	Means and Standard Deviations (SD) of Retention Load (N) for different Type of Cements.	83
12	Means and standard deviations (SD) of Retention Load (N) for different tested variables.	85
13	The modes of failure summary	87

List of Figures

Figure No.		Page No.
1	Implant analog	40
2	Tri-lobe color coded platform of implant analog	40
3	Implant Titanium abutment a. Axial View b. Top view	41
4	TempBond cement	43
5	DentoTemp Cement	45
6	Nickel Chromium Alloy (GILIGA-BF)	46
7	Cold cure acrylic material (Acrostone)	47
8	Elite HD+ Putty Soft Fast Set - 2x 250ml (base+ catalyst)	48
9	Elite HD+ Light Body Fast Set - 2x 50ml cartridges (base+ catalyst)	49
10	Specially designed metallic mold	52
11	Paralleling device (INSTRON)	54
12	The analog was centered in the upper compartment of the paralleling device. A. Axial view / B. Bottom view	54
13	Tightening screw-retained abutment on the implant analogue using torque screw	55
14	Abutment screw access channel was filled with two compacted cotton pellets. a. Application of cotton pellets. / b. Condensation of cotton pellets.	56
15	Abutment screw access channel was filled with glass ionomer (GC Fuji IX Fast). A: Injection of glass ionomer. / B: Condensation of glass ionomer.	57
16	Axial reduction of implant abutment	58
17	Diagram showing the dimension of the implant abutment	59
18	Custom made impression tray	60
19	Two mix impression technique	61
20	Impression after separation from the abutment	61
21	Type IV die stone with die spacer	61

List of Figures

22	Wax Pattern with wax ring and sprue.	62
23	Digital caliper	63
24	Ni-Cr Coping before finishing	64
25	Ni-Cr Coping after finishing	65
26	Copings and implant abutments before cementation	65
27	Equal amount of base and catalyst of TempBond Cement	67
28	Mixing of TempBond cement	67
29	Application of TempBond cement inside the metal coping	68
30	Application of finger pressure for 10 seconds	68
31	Injection of DentoTemp cement inside the metal coping	69
32	Seating the metal coping and application of finger pressure for 10 seconds	69
33	Removing excess cement	70
34	Application of 5 Kg static load for 10 minutes	70
35	Metal copings after cementation were left at room temperature for 12 hours	71
36	Test sample attached to Instron testing machine	73
37	Histogram showing the mean Retention Load (N) for Degree of Taper.	79
38	Histogram showing the mean Retention Load (N) for different Surfaces Roughness.	81
39	Histogram showing the mean Retention Load (N) for different Type of Cements.	83
40	Histogram showing the mean Retention Load (N) for different tested variables	86
41	Adhesive failure at the abutment-cement interface	88
42	Adhesive failure at coping-cement interface	89
43	Cohesive failure	89
44	Adhesive failure with digital microscope	90
45	Mixed failure with digital microscope	90
