Zoology Department

Reconstruction of ancient diet using stable isotope analysis of human soft tissue remains

A thesis Submitted in fulfillment of the requirements for the Ph.D. degree.

By

Walaa Aboubakr Ahmed Basha

Assistant Researcher at the National Research Centre.

B.Sc., Zoology (2005)

M. Sc., Zoology (2009)

2015 A.D.

Reconstruction of ancient diet using stable isotope analysis of human soft tissue remains

A thesis Submitted in fulfillment of the requirements for the Ph.D. degree

By

Walaa Aboubakr Ahmed Basha

Supervisors

Dr / Nagui Hassan Fares
Professor of Cell Biology
Faculty of Science,
Ain-shams University, Cairo, Egypt.

Dr / Moushira Erfan Zaki
Professor of Human Genetics
Biological Anthropology Department
National Research Centre, Giza, Egypt.

Dr / Wafaa Abd Elsamie Kandeel
Professor of Biological Anthropology
National Research Centre, Giza, Egypt.

Dr / Andrew Chamberlain
Professor of Bioarchaeology
KNH Centre for Biomedical Egyptology,
University of Manchester, U.K.

Head of Zoology Department
Prof. Dr. Hamdey Sewalam

Approval Sheet

Name of the candidate / Walaa Aboubakr Ahmed Basha.

Title of the thesis / Reconstruction of ancient diet using stable isotope analysis of human soft tissue remains

This thesis has been approved for submission by the
Supervisors;

Dr / Nagui Hassan Fares - Professor of Cell Biology, Faculty of Science, Ain-shams University, Cairo, Egypt.

Dr / Moushira Erfan Zaki - Professor of Human Genetics, Biological Anthropology Department, National Research Centre, Egypt.

Dr / Wafaa Kandeel - Professor of Biological Anthropology, National Research Centre, Egypt.

Dr / Andrew Chamberlain- Professor of Bioarchaeology, KNH Centre for Biomedical Egyptology, University of Manchester, U.K.

Judgment committee
Dr / Mahmoud Ezzat Mohallal
Dr / Neveen Hussien Mahmoud
Dr/ Moushira Erfan Zaki
Dr/ Nagui Hassan Fares.

Head of Zoology Department
Prof. Dr. Hamdey Sewalam

Acknowledgment

First and above all, I express my great thanks to Allah, for helping me to accomplish this work.

I thank my family who support and encourage me during all my life phases

This study was funded by the **Cultural Affairs and Missions section of the Egyptian Ministry of Higher Education** and I thank the Egyptian government for the financial support in conducting this research.

My deep thanks and gratitude to my supervisors;

Dr/ Nagui Hassan Fares; Professor of Cell Biology, Faculty of Science, Ain-Shams University,

Dr/ Andrew Chamberlain; Professor of Bioarchaeology, the University of Manchester, UK.,

Dr/ Moushira Erfan Zaki; Professor of Human Genetics, Biological Anthropology Department, National Research Centre,

Dr/ Wafaa Abd Elsamie Kandeel; Professor of Biological Anthropology, National Research Centre,

for their continuous advice and sincere help during all phases of this work.

I would like to thank **Dr. Ryan Metcalfe and Mr. John Denton** at the University of Manchester for their help and support in the methodology and the practical work of the thesis.

I would like to thank **Dr. Angela Lamb**, NERC Isotope Geosciences Laboratory, British Geological Survey, Keyworth, Nottingham for her invaluable technical assistance during the isotopic analyses of the tissues.

I am also grateful to all the staff members of **Biological Anthropology Department** at National Research Centre **and KNH Centre of Biomedical Egyptology** at The University of Manchester UK, for their friendship, and continuous constructive advice and support.

ARABIC SUMMARY.

LIST OF TABLES

Table	Description	Page
1	Number and types of tissue analysed in each cemetery	**48**
2	Summary of excavated mummies of S cemetery	**48**
3	Summary of excavated mummies of R cemetery	**49**
4	Steps of the sample processing	**53**
5	Comparison of $\delta^{13}C$ and $\delta^{15}N$ means of the collagen-containing tissues between the two cemeteries.	**64**
6	Mean $\delta^{13}C$ and $\delta^{15}N$ results of collagen-containing tissues in both cemeteries in each age group.	**64**
7	Comparison of means $\delta^{13}C$ and $\delta^{15}N$ of collagen-containing tissues by sex in each cemetery.	**65**
8	$\delta^{13}C$ and $\delta^{15}N$ mean values of different collagen-containing tissue samples.	**65**
9	Comparison of carbon and nitrogen isotope signatures of hair samples by age in both cemeteries.	**66**
10	$\delta^{13}C$ and $\delta^{15}N$ in the successive segments along the hair shafts	**66**
11	Carbon and nitrogen isotope composition of Nubian plants.	**80**

LIST OF FIGURES

Figure	Description	Page
1	Different photosynthetic pathways and examples of each process.	**10**
2	Histograms of carbon isotope ratio ($\delta^{13}C$) for C3 and C4 plants.	**11**
3	Structural difference between (A) C4 and (B) C3 leaf showing characteristic Kranz anatomy of C4 plants leaf.	**11**
4	Illustration of trophic enrichment in $\delta^{13}C$ and $\delta^{15}N$ from primary producers (plants and diatoms), to herbivores, to predators for A) terrestrial ecosystems and B) marine ecosystems.	**12**
5	Schematic drawing of the nitrogen cycle. Letters identify external and internal fluxes and ecosystem pools.	**21**
6	Diagram illustrating some processes in the nitrogen cycle in soils.	**22**
7	The rugged terrain of the Batn-el-Hajar at Kulubnarti.	**27**
8	Map of ancient Egypt and Nubia	**46**
9	Photographs showing the excellent preservation of the mummies of Kulubnarti. A. Mummies from the S cemetery. B. Mummies from the R Cemetery.	**47**

10	Late Christian castle at Kulubnarti.	**47**
11	Plot of $\delta^{13}C$ and $\delta^{15}N$ data measured from collagen-containing tissue samples from both Kulubnarti Cemeteries by sex.	**67**
12	$\delta^{13}C$ values of the two (R & S) cemeteries plotted against estimated age at death.	**67**
13	$\delta^{15}N$ values of the two (R & S) cemeteries plotted against estimated age at death	**68**
14	Distribution of $\delta^{15}N$ values from collagen-containing tissues in infants (0-5years) in both R and S cemetery.	**68**
15	Plot of the $\delta^{13}C$ and $\delta^{15}N$ from both bone collagen and soft tissues of the same individuals plus that of the C3 and C4 plants that might be used in the Nubian population	**69**
16	Plot of $\delta^{13}C$ and $\delta^{15}N$ data measured from hair samples from both Kulubnarti Cemeteries.	**70**
17	$\delta^{15}N$ values of the hair samples from the two (R & S) cemeteries plotted against estimated age at death	**70**
18	Shifts in $\delta^{13}C$ values along the hair shafts from 6 individuals showing the high variations in the sequential hair segments	**71**
19	Shifts in $\delta^{15}N$ values along the hair shafts from 6 individuals (the same individuals who had previously plotted $\delta^{13}C$) plotted against the sequential hair segments	**72**

20	Vertical section of skin was taken from mummy number R129 showing well preservation. PSR.	**74**
21	Vertical section of skin from mummy R2 showing good preservation where, epidermis with brown melanocytes are obvious. PSR.	**74**
22	Vertical section of skin from mummy S173 showing the less effectiveness of the H&E stain and the lack of differentiation between the different components.	**76**
23	Vertical section of skin from mummy S173 showing a biofilm of bacteria present between the collagen fibers.	**76**
24	Vertical section of skin showing bad preservation with degraded collagen of mummy number S17. PSR.	**78**
25	Skin section from mummy R122 showing much degraded collagen fibers. PSR stain	**78**
