M.Sc. Agric. Sc. (Genetics), Ain Shams University, ٢٠٠٥

This thesis for Ph.D. degree has been approved by:

Dr. Mahmoud Imam Nasr

Prof. Emeritus of Genetics, Genetic Engineering and
Biotechnology Research Institute, Minufiya University

Dr. El-Sayed Hassan Hassanien.....

Prof. Emeritus of Genetics, Faculty of Agriculture, Ain Shams
University

Dr. Rania Ahmed Younis

Associate Prof. of Genetics, Faculty of Agriculture, Ain Shams
University

Dr. Mohamed Abdel-Salam Rashed.....

Prof. of Genetics, Faculty of Agriculture, Ain Shams University

Date of Examination: 26/10/٢٠١٠

MOLECULAR MARKERS ASSOCIATED WITH DROUGHT TOLERANCE IN *CITRULLUS COLOCYNTHIS*

Under the supervision of:

Dr. Mohamed Abdel-Salam Rashed

Prof. of Genetics, Department of Genetics, Faculty of Agriculture,
Ain Shams University (Principal Supervisor)

Dr. Rania Ahmed Younis

Associate Prof. of Genetics, Department of Genetics, Faculty of
Agriculture, Ain Shams University

Dr. Nahed Ahmed Kamel Fahmey Rashed

Associate Research Prof. of Genetics, Department of Genetic
Resources, Desert Research Center

ACKNOWLEDGMENT

First I wish to thank **Allah** for all the favors and for prosperity and patience to achieve this study.

I wish to express my deep gratitude and sincere appreciation to **Prof. Dr. S. H. Hassanien**, Prof. of Genetics, Faculty of Agriculture, Ain Shams University for the best acquisition, continuous supervision, kind encouragement, sincere help criticism and precious advices during the progress of thesis work and the preparation of the manuscript.

I would like to express my deepest thanks to Prof. **Dr. F. M. El-Domyati**, Prof. of Genetics, Faculty of Agriculture, Ain Shams University for his close supervision and personal and scientific help during the period of this study.

I would like to express my deepest thanks to Prof. **Dr. M. A. Rashed**, Prof. of Genetics, Faculty of Agriculture, Ain Shams University for his kind supervision and personal and scientific help during the period of this study and his efforts in reviewing the thesis.

I would like to express my deepest thanks to Prof. **Dr. Ismail A. Hussein** Prof. of Pomology, Desert Research Center, for his constructive criticism, providing all needed facilities, sincere help criticism, kind encouragement and helpful instructions.

I would like to express my deepest thanks to **Dr. Rania A. Younis**, Associate prof. of Genetics, Faculty of Agriculture, Ain Shams University for her kind supervision and scientific help and her efforts in reviewing the thesis.

I would like to express my deepest thanks to **Dr. Nahed A. Rashed**, Associate prof. of Genetics, Desert research center

for her kind supervision and scientific help and her efforts in reviewing the thesis.

Special thanks to **Dr. Sherif Edries** and All the staff members of Department of Genetics, Faculty of Agriculture, Ain Shams University, for their cooperation, support and unlimited assistances.

My deepest thanks to the staff members of North Sinai Station, Desert Research Center (DRC), for their kind support.

Finally, I am deeply indebted to **my parents** and **my wife** for their support, continuous encouragement and praying for me.

ABSTRACT

Ahmed Hassan Mohammed, molecular markers associated with drought tolerance in *Citrullus colocynthis*. Unpublished ph.D Thesis, Genetics Department, Faculty of Agriculture, Ain Shams University, 2010.

The present study represents some Mean performance of chemical compositions and vegetative measurements in *Citrullus colocynthis*. Chemical compositions were measured for some components (% Mean total Alkaloids, Mean total Proline Conc. µg/ml (ppm) and Mean total pigments), for four different sites at Red sea coast (Elba Mountain), New valley area, North Sinai, and Katreen. Some vegetative Measurements were measured also in *Citrullus colocynthis* for some characters (Mean leaf area cm², Mean leaves number, Mean branches number, Mean stem diameter cm, Mean shoot length cm and Mean roots length cm). On the other hand molecular markers associated with drought tolerance were studied using thirteen preselected random primers (RAPD) and fourteen preselected (ISSR) primers exhibited polymorphism obtained from the DNAs of sixteen samples of *C. colocynthis* (C1-C4) from the four different sites at Elba Mountain, New valley, North Sinai, and Katreen areas.

The study also aimed to detection and sequencing of some drought tolerance genes in *Citrullus colocynthis* using the genomic DNA based on the four plants analysis, each plant from Elba Mountain, New valley, North Sinai, and Katreen areas. The specific primers of those drought tolerant genes were (Dehydrin gene), (UB gene), (P5CS gene), (PEPKS gene) and (ACT gene), which were succeed to detect some drought tolerant genes among the four locations of *Citrullus colocynthis*.

Key words: *Citrullus colocynthis*, chemical compositions, vegetative Measurements, RAPDs, ISSRs, molecular markers and drought tolerant genes.
