

Role Of Melatonin In The Protection From Lenticular Damage Caused By UVB Irradiation

A Thesis submitted for the degree of Master of Science As a partial
fulfillment for requirements of the Master of Science

Amira Ali Mohamed

B.Sc. (biophysics), 2007
Ain Shams University

Supervised by

Prof. Dr. Mona Salah El-Din Hassan Talaat

Prof. of Biophysics and Head of Biophysics Group, Physics
Department, Faculty of Science, Ain Shams University.

Prof. Dr. Salwa Abd Elkawi Ahmed

Prof. of Medical Biophysics-Vision Science Department
Research Institute of Ophthalmology.

Prof. Dr. Nahed Saleh Hassan

Prof. of Medical Biophysics- Biochemistry Department
National Research Center.

(2013)

APPROVAL SHEET

Name: Amira Ali Mohamed

Title: Role of melatonin in the protection from lenticular damage caused by UVB irradiation

Supervisors

Prof. Dr. Mona Salah El-Din Hassan Talaat

Head of Biophysics Group-Physics Department
Faculty of Science-Ain Shams University

Prof. Dr. Salwa Abd Elkawi Ahmed

Prof. of Medical Biophysics-Vision Science
Department-Research Institute of Ophthalmology.

Prof. Dr. Nahed Saleh Hassan

Prof. of Medical Biophysics- Biochemistry
Department National Research Center.

Name : Amira Ali Mohamed

Degree : Master

Department : Physics- Biophysics Group

Faculty : Science

University : Ain Shams

Graduation Date : 2007, Ain Shams University

ACNOWLEDGEMENT

GOD and nothing but **GOD** I get to thank. **GOD** the merciful spirited me the patience to go through all the circumstances throughout my life.

Whatever I said, I cannot be fair in expressing my cardiac gratitude to **Prof. Dr. Mona Salah Eldin Hassan** for her constant support, continuous encouragement and guidance throughout the study.

I would like to extend my sincere appreciation to **Prof. Dr. Salwa Abd Elkawi Ahmed**. She had done her best effort in guiding me to bring this work in the best shape. Without her meticulous guidance and supervision, this thesis would have never been accomplished.

It was a privilege to be supervised by **Prof. Dr. Nahed Saleh Hassan**. Words cannot express my indebtedness to her for her inspiring guidance.

I would like to thank **Prof. Dr. Abd Elsattar Mohammed Sallam** and **Prof. Dr. Elsayed Mahmoud Elsayed**, for teaching me the basics of biophysics and for their continuous encouragement and support.

Most of all, I would like to express special recognition and thanks to my **Mother, Father, Husband, sister, brothers** and **my beautiful Son** for their patience and support throughout the entire work.

Summary

CHAPTER ONE

Introduction and Review of Literature

1.1	Introduction	1
1.2	Review of literature	2
1.2.1	Ultraviolet-B radiation and its cataractogenic	2
1.2.2	The role of melatonin as a powerful antioxidant	15

CHAPTER TWO

Theoretical Aspects

2.1	The lens	24
-----	----------	----

2.1.1	Lens anatomy	25
2.1.2	Lens protein	29
2.1.3	Permeability, diffusion, and transport	31
2.1.4	Lens transparency	32
2.2	Cataract	33
2.2.1	Classification of cataract	35
2.3	Ultraviolet radiation	36
2.3.1	Ozone layer and ultraviolet radiation	38
2.3.2	Effects of ozone depletion	39
2.3.3	Earth surface UVR dose	40
2.3.4	Intraocular UVR dose	41
2.3.5	Association between UVB exposure and cataract	42
2.4	Antioxidant defense systems in the lens	46
2.4.1	Enzymatic systems	46
2.4.2	Non-enzymatic systems	49
2.5	Melatonin as an antioxidant drug	50
2.5.1	Structure and synthesis of melatonin	50
2.5.2	Regulation of melatonin biosynthesis in the eye	50
2.5.3	Safety of melatonin	51
2.5.4	Melatonin as a protectant against UV-	53

induced oxidative stress

CHAPTER THREE

Materials and Methods

3.1	Experimental animals	58
3.2	Ultraviolet exposure parameters	59
3.3	Sample preparation	59
3.4	Quantitative analysis of total protein content for soluble lens protein	60
3.5	Colorimetric methods	62
3.5.1	Measurement of the total oxidant capacity (TOC)	62
3.5.2	Measurement of the total antioxidative capacity (TAC)	63
3.5.3	Measurement of Malondialdehyde (MDA)	63
3.5.4	Measurement of the calcium concentration	63
3.6	Ultraviolet spectroscopy	64
3.7	Sodium dodecyl sulfate-polyacrylamide gel electrophoresis (SDS-PAGE)	64

3.8	Electrical conductivity	67
3.9	Refractive index measurements	68
3.10	Statistical Evaluation	69

CHAPTER FOUR

Results

4.1	Quantitative analysis of total protein content of soluble lens protein	71
4.2	Colorimetric measurements	71
4.2.1	Measurement of the total oxidant capacity (TOC)	71
4.2.2	Measurement of the total antioxidative capacity (TAC)	72
4.2.3	Oxidative stress index (OSI)	73
4.2.4	Quantitative determination of malondialdehyde (MDA)	74
4.2.5	Measurement of the calcium concentration	75
4.3	Ultraviolet Spectroscopy for lens protein	81
4.4	Sodium dodecyl sulfate polyacrylamide gel electrophoresis (SDS- PAGE)	84

4.5	Measurements of electric conductivity of lens protein	87
4.6	The refractive index (RI)	92

CHAPTER FIVE

Discussion and conclusion

Discussion	94
Conclusion	115
Referances	117
Arabic abstract	

	List of Figures	
(2.1)	The structure of the human eye	27
(2.2)	A cross section of an adult lens	27
(2.3)	Gross anatomy of the crystallin lens of the eye	29
(2.4)	Lens circulation	32
(2.5)	Lens transparency	34
(2.6)	Lens with cataract	35
(2.7)	Electromagnetic spectrum	37
(2.8)	Ozone-oxygen cycle in the ozone layer	39
(2.9)	Ozone layer depletion and its implication for UVR	40
(2.10)	UVR transmission to the eye	42
