بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

"وَقُلْ اَعْمَلُوا فَسَيَرَى اللَّهُ عَمَلَكُمْ وَرَسُولُهُ
وَالْمُؤْمِنُونَ وَسَتُرَدُّونَ إِلَى عَالِمِ الْغَيْبِ
وَالشَّهَادَةِ فَيُنَبِّئُكُمْ بِمَا كُنْتُمْ تَعْمَلُونَ"

صَدَقَ اللَّهُ الْعَظِيمُ

(التوبة: ١٠٥)

GOD bless my Parents

Declaration

I declare that this thesis has been composed and the work recorded here has been done by me.

It has not been submitted for any other degree at this or any other university.

Mohamed Gamal M. Amer

ACKNOWLEDGMENTS

الحمد لله رب العالمين

Praise is to Allah, the lord of all creatures who taught man the whole science and the names of all things.

This Master would never have been completed without the efforts of several people who really I appreciate their instructive support.

I am greatly indebted to Prof. Dr. Shadia Abdel Hamid Fathy, Professor of Biochemistry, Department of Biochemistry, Faculty of Science, Ain Shams University, Egypt and my supervisor for giving me the opportunity to perform this work under excellent working atmosphere, her encouragement, patience and interest that she showed in my work during the study period.

My special thanks are due to Prof. Dr. Mohamed Attia Shreadah, Professor of Marine Chemistry and President of The National Institute of Oceanography and Fisheries (NIOF) for his kind supervision, moral support, instructive guidance and kind advice.

No words can express my sincere gratitude to Prof. Dr. Fatma Farag Abdel Hamid, Professor of Biochemistry, Department of Biochemistry, Faculty of Science, Ain Shams University, Egypt for her guidance and help during the preparation for this work, assisting me during the research activities, for creative ideas, and especially for the careful reading of my thesis. I found her a true academician and I will always remember her with respect.

Special thanks are extended to Prof. Dr. Tarek Othman Said, Professor of Marine Chemistry, National Institute of Oceanography and Fisheries (NIOF), Alexandria, Egypt for his participation in the this study, his encouragement and his great support at the beginning of my practical work. I closely worked with him throughout the all stages of this study and I found in him a decent, kind and a

ACKNOWLEDGEMENTS

greatly respective person. I would like to thank him very much for his guide during the practical work,

I am grateful to all my colleagues in NIOF especially Prof. Dr. Laila Abdel Fattah, the head of central laboratories unit, for providing a good working environment, working assistance whenever necessary, and for sharing their scientific knowledge.

I would also like to sincerely thank my parents, brother and sister for their support, encouragement and for all love, continuous support and prayers.

Mohamed Gamal El-Gazar

ABSTRACT

Biochemical markers are a popular measure of toxic effects on organisms due to their assumed fast response and are usually assessed after acute exposure of the organism to the stressor xenobiotics.

This study aimed to measure heavy metals (Fe, Cu, Zn, Pb, Cd and Hg), total hydrocarbons (THCs), polyaromatic hydrocarbons (PAHs), pesticides (OCPs) and polychlorinated biphenyls (PCBs) toxicity incidence on *Tilapia niloticus*. Biomarkers such as total antioxidant activity (TAA), aspartate aminotransferase (AST), alanine aminotransferase (ALT) and alkaline phosphatase (ALP) activities in blood plasma, in addition to the total proteins and lipids in *T. niloticus* tissues (muscles and liver) have been investigated. The resulting data was subjected to statistical analyses in order to assess water quality index (WQI) and its impacts on biochemical functions of *Tilapia* collected from three different hot spot sites (Nubaria, Umoum and Kilo 21).

Principle component analysis (PCA) used to evaluate both the hot spot sites and the highly affected groups, in addition to the origin of pollution in each site and group. This study highlights the importance of using a set of integrated biomarkers to assess the some environmental pollutants toxicity in *Tilapia niloticus*. The results showed that pollutants induced a significant increase in the total proteins and total lipids content in the muscle and liver tissues. Total Cyclodienes (TC), Pb, Cd, hexachlorocyclohexanes (HCHs), Hg and organochlorine pesticides (OCPs) were shown to be accumulated higher than other environmental pollutants in both muscle and liver. Origin of pollution in liver tissues of group I during summer was related to Zn, Pb, Hg and PCBs. ALT, AST, ALP activities and TAA increased significantly ($p \leq 0.01$) indicating tissues damage in groups appeared to be highly affected by pollutants as indicated by PCA.

In conclusion, the studied groups could be arranged in the following order according to pollutants loading: Group I (Nubaria) > Group II (Umoum) > Control group (Kilo 21) and that was confirmed by WQI values. It is recommended to take care when using Nile *Tilapia* from those sites for human consumption as it accumulates pollutants in liver and muscles.
