Abstract

The present study had been conducted at El Agosa bride well place. The aim of the study was to assess bride well's adolescent girl's reproductive health needs. Data collection were carried out through two continuous months, 71 adolescent girls were involved in the study, all girls with the age 11-22 included in the study (Purposive sample). The study tools used for data collection were ; structured interviewing questionnaire; that consisted of three parts, the first part included demographic data, and the second part included physical and psychological changes, history of surgical procedure, while the third part assessed the reproductive health information. The second tool was likert scale to assess the girl's attitudes about the reproductive health. The results were indicated that, 67.6% of the sample are illiterates and 62% admitted to the bride well because of being homelessness. 64.8% have got inadequate preparations for menarche and 47.9% encouraging the female circumcision practice. There was a significant relationship between the reproductive health knowledge and the age of girls. The conclusion was that, most of the studied adolescent's girls in the bride well had incorrect knowledge related to the reproductive health issues. The study recommended that; the need of attention for this group of society "the adolescent's girls in the bride well" need health educational programs for improving girls' knowledge ,practice and attitudes regarding the females' reproductive health .

.

DEDICATION

To my family, specially father; who was always encouraging me. To my husband; and to my daughter.

Acknowledgments

First and fore most, I feel always indebted to **Allah**. The most kind and most merciful dedication, caring, trust and integrity are not just words to me. I have experienced all of these in this work.

I wish to express my deep gratitude to **Prof. Dr: Nadia Mohamed Fahmy**, professor of maternity and neonatal nursing, Ain Shams University, for her fruitful guidance, valuable support and instructions at the start of this work, all are deeply and heartily appreciated.

I wish to express my appreciation to **Prof.Dr: Safaa Abd El Raouf Hashim**, assistant professor of maternity and neonatal nursing, Faculty of Nursing, Ain Shams University. I am indebted to her meticulous supervision, directions, and constructive criticism, her help and support helped completion of this work.

A grateful appreciation to **Dr: Nevin Samir Metwally**, lecture of maternity and neonatal nursing, Faculty of Nursing, Ain Shams University. Words cannot describe how grateful I am for her supervision; tireless efforts of fruitful guidance, all are deeply and heartily appreciated.

Last but not least .Words cannot express the gratitude I have to all those who offered their help and advice during this study.
