Assistant professor - Reinforced Concrete Institute Housing & Building - National Research Center

Title of Thesis:

**NON-LINEAR ANALYSIS OF SINGLE COUPLED SHEAR WALLS
SUPPORTED ON COLUMNS**

Key Words:

Coupled shear walls supported on columns; Seismic loads; Anon- linear static analysis; finite elements, ANSYS (14) software.

Summary:

Coupled shear walls supported on columns used to resist the lateral loads in high rise building, when the total horizontal length not needed in ground floors, because architectural reasons such as parking requirements. The objective of this research was to observe deflection, propagation of cracking through the whole structural elements of the system in both elastic and post-elastic range, and to study a non- linear finite element analysis with variation in characteristic strength, reinforcement ratio for whole structural elements of the system, and the stiffness of columns with respect to stiffness of wall. Non-linear finite elements program “ANSYS 14”, used to study the behavior of 18 samples from coupled shear walls system. The results are reported as effect of characteristic strength, stiffness ratio between column and wall, and reinforcement ratio on the ultimate horizontal load capacity, Maximum drift of the system at top point, Yielding drift of the system at top point, Yielding load capacity of the system, load of first shear cracks, Load of first flexural cracks, and Ductility.

ACKNOWLEDGMENTS

To Allah, everything in life is resumed. In this work he has helped me a lot and offered me what I did not know and what I have to know. Allah is the first and the last. Then, those offered by Allah to advise and guide have to be thanked.

Foremost, I would like to express my sincere thanks and deepest gratitude to my thesis advisor **Assistant Professor Dr. Naser El shafey** for his continuous supervision, valuable guidance, suggestions and time throughout the study period. Without his inspiration and intellectual stimulation, this study would have never been completed. Moreover, I appreciate **Professor Dr. Mohamed El Said Issa, Dr. Heba M. El Said Issa** for their suggestions.

I extend my deepest gratitude to my **wife Hagar, and my mother**, for their encouragement and valuable support to complete this study. Without their valuable support, this study would not have been successful. Thanks are also to my **brothers Mohamed, Esmaeil, and my sister Amira** for their patience to live gracefully in my absence during this study.

Amir Abd Elfadeel
