Statement

This dissertation is submitted as a partial fulfillment of the degree of Doctor of Philosophy in Electrical Engineering (Electronics and Communications Engineering), Faculty of Engineering, Ain Shams University.

The author carried out the work included in this thesis and no part of it has been submitted for a degree or a qualification at any other scientific entity.

Name : Mohamed Mostafa Ibrahim Ibrahim

Curriculum Vitae

Name of the researcher: Mohamed Mostafa Ibrahim Ibrahim

Date of Birth: 17 – 10 – 1981

Place of Birth: Al Sharkia

Nationality: Egyptian

Education: B.Sc. in Electronics and Communication Engineering, EL
Shorouk Academy-2003

M.Sc. in Electronics and Communication Engineering,
Helwan University-2010

Experience: Instructor at Higher Institute of Engineering, Electronics
and Communication Engineering, EL Shorouk Academy
from 2003 until 2010

Teaching Assistant at Higher Institute of Engineering,
Electronics and Communication Engineering, EL Shorouk
Academy from 2010 until 2017

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قَالَ تَعَالَى:

﴿يَرْفَعُ اللَّهُ الَّذِينَ آمَنُوا مِنْكُمْ وَالَّذِينَ أُوتُوا الْعِلْمَ دَرَجَاتٍ وَاللَّهُ

بِمَا تَعْمَلُونَ خَبِيرٌ﴾ المجادلة: ١١

Acknowledgements

First and foremost, I would like to thank **ALLAH**, the Almighty for the great help during my whole life.

In memorial of ***Professor Adel El-Henawy***, may ALLAH have mercy with him, I would like to thank him for his continuous encouragement and support during the period he worked with me before his death.

I would like to express my honest thanks and appreciation to my supervisors: ***Professor Ismail Mohamed Hafez*** and ***Professor Fatma Abdelkarem Newagy*** for their valuable guidance, support and suggestions. Their encouragement helped me overcome the difficulties I have encountered throughout my research. It has been a pleasure working under their supervision and will be a valuable memory in my life.

I would also like to thank my family for their constant love and support. I would not be the person I am without their influence and back up. My true love goes to my ***mother***. I ask ALLAH to give her the long life with happiness and health and my ***father***, may ALLAH have mercy with him.

I am also especially grateful to ***my wife*** and my sons ***Mostafa***, and ***Kareem***, for their kindness, support, and encouragement, which provided the necessary enthusiasm to accomplish this thesis. This thesis is a dedication for their love.

Abstract

The continuous need for a high-speed wireless access technology has received more attention, especially in the past decade with the development of the 4G communication technologies. Single carrier – frequency division multiple access scheme is one of the promising technologies, which have proved its robustness against various impairments in severe wireless channel conditions.

In this thesis, the research work is dedicated to analyze and investigate the performance improvement of these systems via frequency domain equalization and precoding schemes. A novel frequency domain equalizer as well as a proposed precoder is introduced. The bit error rate, as function of the signal to noise ratio, is the performance metric of interest which is utilized to evaluate the proposed schemes under different standard hypothetical and realistic channel conditions. Moreover, the quadrature phase shift keying (QPSK).

On the other hand, the energy efficiency, in bits per unit energy, is adopted as a system level performance evaluation metric. Furthermore, the analysis and performance evaluation has been extended to include the effects of the multi-user interference for all propagation environments. The carrier frequency offset is also included throughout the analysis and simulations. Since the use of massive, multiple input multiple output (MIMO) systems an unavoidable part of next generation communication networks, the performance of the considered system is studied when the number of antennas is increased such that the system tends to the massive MIMO regime.

ABSTRACT

The simulation results indicate that the performance of the a SC-FDMA system using the proposed schemes is highly competitive to the conventional zero forcing (ZF) and minimum mean squared error (MMSE) schemes assuming different CFOs, modulation schemes and channel models. Finally, some design guidelines are concluded to compromise between the BER and the EE during the system level and link level design phases.

Key Words:

- Orthogonal Frequency division multiple access
- frequency domain equalizer
- Single Carrier
- Multi carrier
- Energy Efficiency
- Precoders

Table of Contents

Acknowledgements	vi
List of Publications	vii
Abstract	ix
Table of Contents	x
List of Abbreviations	xvii
List of Figures	xxi
List of Tables	xxiv
List of Symbols	xxv
Chapter 1 Introduction	1
1.1 Thesis Objectives	1
1.2 Motivation	2
1.3 thesis Contribution	3
1.4 Dissertation outline	4
Chapter 2 Single and Multi-Carrier Communication Systems	6
2.1 Historical development of cellular Wireless Communications	6

2.2 Vehicular RF Channel	8
2.2.1 Fast and Slow Fading	9
2.2.2 Frequency Selective and Frequency Fading Flat	9
2.2.3 Channel Equalization	10
2.3 Multi-Carrier Communication Systems	12
2.3.1 OFDM System	13
2.3.2 OFDMA System	16
2.3.3 MC-CDMA System	17
2.4 Single-Carrier Communication Systems	18
2.4.1 SC-FDM System	19
2.4.2 SC-FDMA System	21
2.5 Conclusion	22
 Chapter 3 SC-FDMA System	 23
3.1 Introduction	23
3.2 Subcarriers Mapping Techniques	24
3.3 SC-FDMA System Model	26
3.4 the presentation of SC-FDMA symbols in time domain	32

3.4.1 Time Domain Symbols of the IFDMA System.....	32
3.4.2 Time Domain Signals for LFDMA techniques	33
3.5 Comparison between the OFDMA System and the SC-FDMA System	35
3.6 The Peak-to-Average Power Ratio problem	36
3.6.1 The Power Amplifier	36
3.6.2 The impact of A/D and D/A Resolution	40
3.6.3 Windowing Filters	40
3.7 Impact of the CFO induced ICI on the BER	42
3.8 Conclusion	43
 Chapter 4 Massive MIMO SC-FDMA Systems	 44
4.1 Introduction	44
4.2 System model Overview	45
4.3 SC-FDMA UE-BS Transceiver Chain	47
4.3.1 The transmitter side.....	48
4.3.1.1 Precoder	48
4.3.2 Multiple Port MIMO Channel Model	50
4.3.3 Receiver Processing	52

4.3.3.1 Single Carrier Frequency Domain Equalization (SC-FDE) and Symbol Detection	55
4.4 Performance Evaluation Metrics	55
4.4.1 Complexity	56
4.4.1.1 Overall system Complexity	57
4.4.1.2 Complexity of TX/RX chains	57
4.4.2 Energy Efficiency	57
4.4.3 Bit Error Rate	58
4.5 Conclusion	58

Chapter 5 Equalization Schemes for Massive MIMO SC-FDMA Systems:

Link Level Analysis	59
5.1 Introduction	59
5.2 Link Level System Model	61
5.2.1 Noise and ICI Analysis	62
5.3 The proposed JCRZF equalizer	65
5.3.1 Transformation of the MIMO channel into two equivalent SISO Channels	66
5.3.2 Equalization and ICI Mitigation	67

5.4 Complexity analysis	70
5.5 Simulation results and analysis	71
5.5.1 Simulation Setup	71
5.5.2 Results and discussion	72
5.6 Conclusion	88
 Chapter 6 Precoding Schemes for Massive MIMO SC-FDMA Systems: System Level Analysis	 89
6.1 Introduction	89
6.2 Energy efficiency (general)	91
6.3 Data Rate and SNR Analysis	94
6.4 Transceiver Power Consumption Analysis	95
6.4.1 The average Transmitted Power	95
6.4.2 Core power consumption	96
6.4.3 Circuit Power Consumption Model	97
6.4.3.1 Transceiver Chains	98
6.4.3.2 Channel Estimation	98
6.4.3.3 Coding and Decoding	99
