EARLY RESYNCHRONIZATION AND ERROR CONCEALMENT
OF VIDEO TRANSMITTED OVER WIRELESS CHANNELS

by

Osama Abdel Latif Ahmed Lotfallah

A Thesis Submitted to the
Faculty of Engineering at Cairo University

In Partial Fulfillment of the
Requirements for the Degree of
MASTER OF SCIENCE

in
COMPUTER ENGINEERING

July 2001

ACKNOWLEDGEMENTS

I wish to express my sincere gratitude to Professor Ahmed M. Darwish for his guidance and support. I have truly benefited from working with him, and I greatly appreciate his care and dedication in constructively criticizing my work and my thesis.

I would also like to express my thanks to Doctor Khaled M. El-Sayed for his guidance. I have truly benefited from his co-supervision of my work.

I wish to also thank the other members of my committee, Professor Ibrahim Farag and Professor Samir Shaheen for their support.

Finally, I would like to thank my family for their continuous and unwavering support.

TABLE OF CONTENT

	Page
List of tables.....	iv
List of figures.....	v
List of abbreviations.....	ix
ABSTRACT.....	x
1. Introduction.....	1
1.1 Research objectives.....	2
1.2 Previous work.....	2
1.2.1 Error Resilience.....	3
1.2.2 Error Concealment (EC).....	4
1.3 Problem definition.....	4
1.4 Thesis organization.....	5
2. Background.....	7
2.1 MPEG-2 video standard.....	7
2.1.1 Coloring systems.....	7
2.1.2 MPEG chrominance sampling and MacroBlocks.....	9
2.1.3 Discrete Cosine Transform (DCT).....	10
2.1.4 Coefficient quantization.....	11
2.1.5 Entropy coding.....	13
2.1.6 MPEG coding models.....	14
2.1.7 Intra-picture (I-picture) coding.....	15
2.1.8 Inter-picture (P- and B-picture) coding.....	18
2.1.9 The video structure of MPEG-2 main profile.....	19
2.1.10 Typical MPEG-2 encoder.....	21
2.2 Transport Stream (TS).....	23
2.3 Channel simulator.....	24
2.3.1 Transmitter and Receiver diagrams.....	25
2.3.2 Building components.....	26
3. Previous work in early resynchronization and error concealment.....	31
3.1 Error Detection.....	31
3.1.1 Source level error detection.....	31
3.1.2 Channel level error detection.....	32
3.1.3 Iterative decoding.....	32
3.2 Early Resynchronization (ER) algorithm.....	33
3.2.1 The ER algorithm for I-pictures.....	33
3.2.2 The ER algorithm for P-pictures.....	35
3.3 Differential parameter resolving.....	36
3.3.1 The DC parameter.....	36
3.3.2 The Motion Vector (MV) parameter.....	42
3.3.3 The Quantization Scale (QS) parameter.....	43
3.3.4 The MB-addressing parameter (positioning).....	43
3.3.5 Discarding wrong MBs (partitioning).....	45
3.4 Error Concealment (EC).....	45
3.4.1 Simple spatial concealment scheme.....	46
3.4.2 Error concealment schemes in the frequency domain.....	46
3.4.3 Error concealment schemes in the space domain.....	47

3.4.4	Error concealment schemes in the time domain	49
3.4.5	Adaptive error concealment schemes	50
4.	Early resynchronization algorithm	53
4.1	Error detection	55
4.1.1	Channel decoder error detection	55
4.1.2	Source decoder error detection	56
4.2	Different states of MPEG-2 ER decoder	60
4.3	The ER algorithm for I-picture	61
4.3.1	Analysis of the current ER algorithms	62
4.3.2	Difficulties facing the current ER algorithms	64
4.3.3	The proposed Masking algorithm	66
4.3.4	The estimated time requirement of the ER algorithms	67
4.4	The ER algorithm for P-picture	72
4.4.1	Difficulties facing the ER algorithms for P-picture	74
4.4.2	The estimated time requirement of the ER algorithms for P-picture	74
4.5	Reversible Variable Length Codes (RVLC)	77
5.	Parameter recovery after early resynchronization	81
5.1	The DC problem	81
5.1.1	DC frequency interpolation (enhanced with MB existence) applied to luminance component	82
5.1.2	Difficulties with the frequency solutions	85
5.1.3	The spatial DC correction enhanced with MB existence	86
5.2	The Quantization Scale (QS) problem	88
5.2.1	Solution to QS in the spatial domain	89
5.2.2	Solution to QS in the frequency domain	92
5.3	The Motion Vector (MV) problem	93
5.3.1	The total averaging of MVs	94
5.3.2	The best of the averaged values solution	95
5.3.3	Difficulties with the previous solutions	96
5.3.4	The proposed median over median solution	97
5.4	The subslice partitioning	99
5.5	The positioning problem	100
5.5.1	The best location based on MSE of boundaries	101
5.5.2	Difficulties with the previous solution	102
5.6	Pseudo code of the proposed parameter adjustment	103
6.	Simulation results	105
6.1	The fidelity criteria	105
6.2	The DC correction results	107
6.3	The MV correction results	112
6.4	The QS correction results	117
6.5	The combined ER-EC results	118
6.5.1	The I-pictures results	119
6.5.2	The P-pictures results	124
6.6	Summary of results	130
7.	Conclusion and recommendation for future work	131
