مَنْطِقَةِ اللَّهِ الْعَظِيمِ

ACKNOWLEDGEMENT

First and foremost, my deep gratefulness and indebtedness is to ALLAH.

I wish to express my sincere gratitude to Dr. Nahed Mohamed Moustafa, Assistant Professor of Forensic Medicine and Toxicology, Head of the Forensic Med. & Toxicology Unit, Faculty of Medicine, Suez Canal University, for constructive encouragement and advice in preparing this study.

I will never be able to express my deepest and sincere gratitude to Dr. Taha Ali Moati, Assistant Professor of General Surgery, Faculty of medicine, Suez Canal University, for his kind supervision, indispensable guidance and encouragement until this work is executed.

I am very much grateful and indebted to Dr. Somia Hamoda EL Sayed, Deputy minister of medico-legal Laboratories previously, who guided me with patience and efforts to provide instructions needed during my study and during the practical work.

CONTENTS

Acknowledgment

1. Introduction & Aim of the Work	1
2. Literature Review:	5
2.1 Definitions of drug abuse	5
2.2 Magnitude of the drug abuse problem	6
2.3 Types of abused drugs in trauma patients	7
- Cannabis	8
- Amphetamines	11
-Cocaine	13
-opioids	15
-Anticholinergics	18
-Benzodiazepines	19
-Alcohol	20
2.4 Definition of trauma	21
2.5 Magnitude of the problem of trauma	21
2.6 Classification of injury	24
2.7 Biomechanics of injury	28
2.8 Pattern of injury in motor vehicle accidents	31
2.9 Pattern of injury in violence	38
2.10 Pattern of injury in falls	40
2.11 Drug abuse and motor vehicle collisions	41
1.12 Drug abuse and violence	45
1.13 Drug abuse and self –inflicted injury and suicide	48
2.14 Drug abuse and falls	48
2.15 Drug abuse and injury outcome	50
3. Patients & Methods	54
4. Results & Case Presentation	71

5. Discussion	94
6. English Summary	110
7. Recommendations	114
8. References	115
9. Appendix	128
10. Arabic Summary	

LIST OF FIGURES

Figure 1: Cannabis sativa plant (Leaves). (Page 10)

Figure 2: Erythroxylon coca plant (Leaves). (Page 14)

Figure 3: capsules of papaver somniferum (poppy) plant.
(Page 17)

Figure 4: Injury Pyramid. (Page 24)

Figure 5: Deceleration injury in motor vehicle accidents.
(Page 33)

Figure 6: Pedestrian injury. (Page 36)

Figure 7: Truncal impact in pedestrian injury. (Page 37)

Figure 8: Injuries to the head and extremities in pedestrian
injury. (Page 37)

Figure 9: Mechanism of violence. (Page 45)

Figure 10: The percentage distribution of trauma patients
according to their residence. (Page 74)

Figure 11: The distribution of trauma patients in group A
according to the types of abused drugs which
detected in their extracted urine samples. (Page 77)

Figure 12: The distribution of trauma patients according to the
type of trauma. (Page 80)

Figure 13: The percentage distribution of the clinical outcome of
trauma patients. (Page 84)

Figure 14: The percentage of major anatomical injuries in trauma
patients. (Page 88)

Figure 15: Chromatogram of thin layer Chromatography testing
for Cannabinoids. (Page 90)

Figure 16: Chromatogram of thin layer Chromatography testing
for Parkinol and Rohybnol. (Page 91)

Figure 17: Chromatogram of thin layer Chromatography testing
for Codeine. (Page 92)

Figure 18: Chromatogram of thin layer Chromatography testing
for Amphetamine. (Page 93)

LIST OF TABLES

- Table 1:* Age group distribution of trauma patients according the results of detection of abused drugs in their extracted urine samples. (Page 73)
- Table 2:* Occupation distribution of trauma patients in both groups of trauma patients. (Page 74)
- Table 3:* The relationship between the community of trauma patients and the results of detection of abused drugs in their extracted urine samples. (Page 75)
- Table 4:* Leading causes of injury in trauma patients in relations to the results of detection of abused drugs in their extracted urine samples. (Page 76)
- Table 5:* Relationship between cause of injury in group A and the results of detection of abused drugs in their extracted urine samples. (Page 79)
- Table 6:* The distribution of types of trauma according to the results of detection of abused drugs in the urine samples of trauma patients. (Page 81)
- Table 7:* Results of color test of different extracted abused drugs from urine samples. (Page 81)
- Table 8:* Trauma score as an index for the severity of trauma in trauma patients in relation to the results of detection of abused drugs in their extracted urine sample. (Page 82)

Table 9: Distribution of injury severity score (ISS) among trauma patients according to the results of detection of abused drugs in their extracted urine samples. (Page 83)

Table 10: The relationship between the clinical outcome of trauma patients and the results of detection of abused drugs in their extracted urine samples. (Page 85)

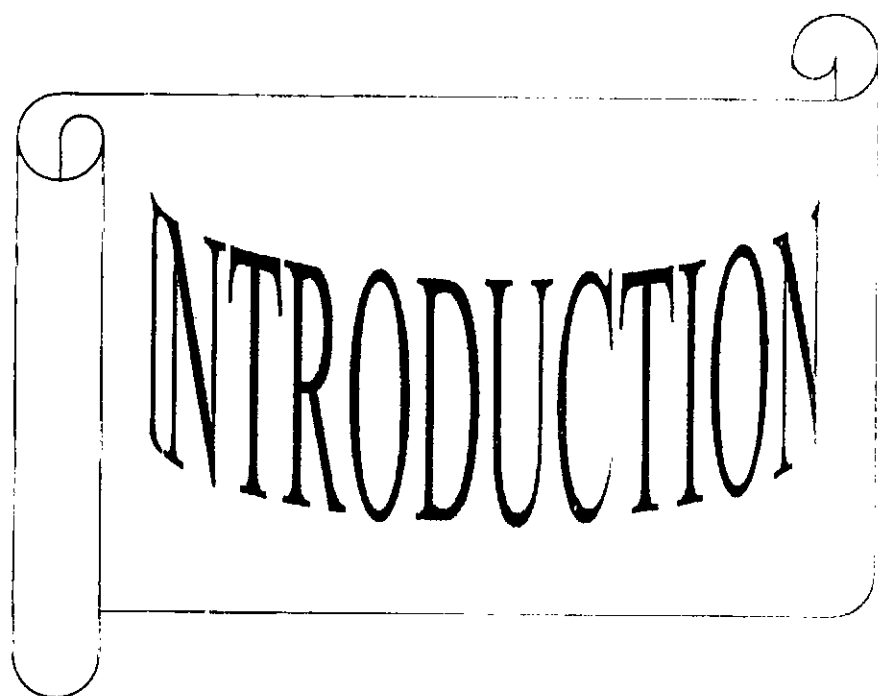

Table 11: The relationship between type of drug in extracted urine samples of group A patients and their clinical outcome. (Page 87)

Table 12: The relationship between patients clinical outcome with the regional site of injury. (Page 89)

Table 13: Trauma Score (TS). (Page 132)

Table 14: Glasgow Coma Score (GCS). (Page 133)

Table 15: Abbreviated Injury Scale. (Page 134, 135)
