Application of the Pulsed Column Technology in Uranium Recovery from Gattar Uranium Ore Concentrate, Eastern Desert, Egypt

ATHESIS

Submitted By

Walid Mohamed Morsy Ramadan

M.Sc. Chemistry (2009)

To fulfilment of the Degree of Doctor of Philosophy in Science (PhD)

(In-Organic Chemistry)

Supervised by

Prof. Dr. Mohamed .F. El-Shahat Dorgam

Prof. of Analytical and Inorganic Chemistry

Faculty of Science, Ain Shams University

Prof. Dr. Hisham Mohamed Kamal Mahmoud

**Application of the Pulsed Column Technology in
Uranium Recovery from Gattar Uranium Ore
Concentrate, Eastern Desert, Egypt**

ATHEISIS

Submitted By

Walid Mohamed Morsy Ramadan

To fulfillment for the degree of doctor of philosophy in science
(PhD) (Inorganic Chemistry)

This Thesis has been approved for submission by the supervisors

Prof. Dr. Mohamed .F. El-Shahat Dorgam.....

Prof. of Analytical and Inorganic Chemistry

Faculty of Science, Ain Shams University

Prof. Dr. Hisham Mohamed Kamal Mahmoud.....

Nuclear Material Authority

Dr. Reda Abd Elshahed Abd Elgawad Gazala.....

Nuclear Material Authority

Head of Chemistry Department
Faculty of Science Ain Shams University

Prof. Dr. Ibrahim.H.A.Badr

ABSTRACT	xvii
INTRODUCTION	1
CHAPTER .I. THEORETICAL ASPECTS AND LITERATURE REVIEW	
I.1.General Statement	7
I.2. Uranium Ore Leaching Procedures	10
I.2.1.Acid Leaching Characteristics	11
I.2. 1.Alkaline Leaching Characteristics	12
I.3.Uranium Concentration and Purification Procedures	14
I.3.1.Uranium Recovery by Ion Exchange Resins	16
I.3.1.1.Uranium Adsorption Process	16
I.3.1.2.Uranium Elution Process	19
I.3.1.3.Ion Exchange Equipment	20
I.3.2.Uranium Recovery by Organic Solvents	25
I.3.2.1.Uranium Extraction Chemistry	27
I.3.2.2.Uranium Stripping Chemistry	33
I.3.2.3.Multistage Operation	35
I.3.2.4.SolventExtraction Equipment	37
A. Characteristics of the Pulsed Column	44
B. Design Aspects of the Pulsed Column	45

C. Operating Conditions	48
D. Empirical Correlations for the Design of Pulsed Column	53
(i).Maximum Flux and Pulsation Intensity	54
(ii) Flooding and Flooding Curve	57
(iii)Axial Dispersion	59
(iv)Holdup	61
(v)Drop size	62
(vi)Backmixing	63
I.4.Uranium Product Precipitation	64
I.4.1.Precipitation from Acidic Solutions	65
I.4.1.1.Neutralization Precipitation	65
I.4.1.2.Oxidation Precipitation	66
I.4.2.Precipitation from Alkaline Solution	67
I.4.2.1.Hydrolysis Precipitation	67
I.4.2.2.Oxidation Precipitation	68
I.4.2.3.Crystallization Precipitation	68
CHAPTER II: EXPERIMENTAL	
II.1.Chemicals and Reagents	69
II.2.Material	70
II.3.Purification Procedures	72
II.3.1.Batch Mixed Eluex(Synergism)	72
II.3.2.Continuous Mixed Eluex(Pulse Column)	73
II.3.2.1.Characteristics of the Constructed Column	73

(i) Effect of Pulsation Intensity and Frequency.	76
(ii) Dispersed-Phase Holdup	77
II.3.2.2.Detrimination of the Relevant Physical Parameters	78
(i)Density	78
(ii)Viscosity	78
(iii) Interfacial Tension area	79
II.3.3.Uranium Product Precipitation	79
II.4.Analytical Procedures	80
CHAPTER III :RESULTS AND DISCUSSION	
III.1-Results of Equilibrium Mixed EluexProcedures	83
III.1.1-EquilibriumMixed Amex Procedures	83
III.1.1.1-Study of Relevant Uranium ExtractionFactors	84
i.Effect of pH.	84
ii. Effect of Contact Time.	86
iii. Effect of Uranium Concentration	87
iv. Effect of D2EHPA Concentration.	88
v. Effect of TOA/D2EHPA Mixed SolventConcentration.	90
vi. Effect of Temperature.	91
vii. Effect of Chloride Concentration.	92
viii.Effect of O/A Ratio and Construction of McCabe-Thiele Extraction Diagram	94
III.1.1.2- Study of Relevant Uranium Re-extraction Factors	95
i-Effect of Contact Time	97
ii-Effect of Temperature	98

iii-Effect of O/A Ratio and Construction of McCabe-Thiele Stripping Diagram	99
III.1.2. Equilibrium Mixed Dapex Procedure	101
III.1.2.1-Study of the Relevant Uranium Extraction Factors	102
i. Effect of pH.	102
ii. Effect of Contact Time	104
iii. Effect of Uranium Concentration	105
v. Effect of Solvent Concentration.	106
vi. Effect of Temperature.	107
vii. Effect of Chloride Concentration.	108
viii. Effect of O/A Ratio and Construction of McCabe-Thiele Extraction Diagram construction	110
III.1.2.2- Study of the Relevant Uranium Re-extraction (Stripping) Factors	112
i-Effect of Contact Time	113
ii-Effect of Temperature.	114
iii-Effect of O/A Ratio and Construction of McCabe-Thiel Stripping Diagram	115
III.2.Application of the Pulsed Column	116
III.2.1.Extraction Results via the working Pulsed Column	117
III.2.1.1-Effect of the Pulsation Intensity	120
III.2.1.2-Effect of the Max Flux	122
III.2.1.3-Effect of the Frequency	124
III.2.2. Stripping Results via the working Pulsed Column	126

III.2.2.1-Effect of the Pulsation Intensity	129
III.2.2.2-Effect of the Max Flux	131
III.3.Uranium Product Precipitation	133

LIST OF TABLES

	Page
Table(1): Classification of commercial contactors and their performance	43
Table (2): Specifications of the used chemicals and reagents	68
Table (3): Chemical composition of Gattar II PLS obtained by sulfuric acid heap leaching of GII uranium ore	70
Table (4): Chemical composition of Gattar II eluate of Gattar mini pilot plant	71
Table(5): Geometrical characteristics of the working pulsed column	76
Table (6): Effect of pH on uranium and iron extraction from Gattar mini pilot plant eluate by 3%TOA/2%DEHPA mixed solvent in kerosene	85
Table (7): Effect of contact time on uranium extraction from Gattar mini pilot plant eluate by 3%TOA/2%D2EHPA mixed solvent in kerosene	86
Table (8): Effect of Uranium concentration on its extraction from Gattar mini pilot plant eluate by 3%TOA/2%D2EHPA mixed solvent in kerosene	87
Table(9): Effect of D2EHPA Concentration on uranium and iron extraction from Gattar mini pilot plant eluate by together with 3%TOA solvent in kerosene.	89
Table (10): Effect of Solvent concentration on uranium	

extraction from Gattar mini pilot plant eluate by TOA/D2EHPA mixed solvent in kerosene	90
Table (11): Effect of temperature on uranium extraction from Gattar mini pilot plant eluate by 3%TOA/2%D2EHPA mixed solvent in kerosene	91
Table (12):Effect of chloride concentration on uranium extraction from synthetic solvents comparable to Gattar mini pilot plant eluate by 3%TOA/2%D2EHPA mixed solvent in kerosene	92
Table (13): Effect of O/A ratio on uranium extraction from Gattar mini pilot plant eluate by 3%TOA/2%D2EHPA mixed solvent in kerosene	94
Table (14):Effect of contact time on uranium stripping efficiency from loaded 3%TOA/2%D2EHPA mixed solvent using 120g/l Na ₂ CO ₃	97
Table (15):Effect of Temperature on uranium stripping efficiency from loaded 3%TOA/2%D2EHPA mixed solvent using 120g/l Na ₂ CO ₃	99
Table (16): Effect of O/A-ratio on uranium stripping from loaded 3%TOA/2%D2EHPA mixed solvent using 120g/l Na ₂ CO ₃	100
Table (17): Effect of pH on uranium and iron extraction from Gattar mini pilot plant eluate by 3% D2EHPA /3%TBP mixed solvent in kerosene	103

Table (18): Effect of contact time on uranium extraction from Gattar mini pilot plant eluate by 3% D2EHPA /3%TBP mixed solvent in kerosene	104
Table (19): Effect of Uranium concentration on its extraction from Gattar mini pilot plant eluate by 3% D2EHPA /3%TBP mixed solvent in kerosene	105
Table (20): Effect of Solvent concentration on uranium extraction from Gattar mini pilot plant eluate by D2EHPA/TBP mixed solvent in kerosene	107
Table (21): Effect of temperature on uranium extraction from Gattar mini pilot plant eluate by 3% D2EHPA /3%TBP mixed solvent in kerosene	108
Table(22):Effect of chloride concentration on uranium extraction from synthetic solvents comparable to Gattar mini pilot plant eluate by 3% D2EHPA /3%TBP mixed solvent in kerosene	109
Table(23): Effect of O/A ratio on uranium extraction from Gattar mini pilot plant eluate by 3% D2EHPA /3%TBP mixed solvent in kerosene	110
Table (24):Effect of contact time on uranium stripping efficiency from loaded 3% D2EHPA /3%TBP mixed solvent using 120g/l Na ₂ CO ₃	112
Table (25):Effect of Temperature on uranium stripping efficiency from loaded 3% D2EHPA /3%TBP mixed	

solvent using 120g/l Na ₂ CO ₃	113
Table (26): Effect of O/A-ratio on uranium stripping from loaded 3% D2EHPA /3%TBP mixed solvent using 120g/l Na ₂ CO ₃	114
Table(27):Physical properties of the operating liquid systems(3%TOA/2%D2EHPA,3%D2EHPA/3% TBP and the Gattar mini pilot plant eluate	117
Table(28): Calculated theoretical operating parameters of the working extraction process in the designed pulsed column	118
Table (29)-Effect of the pulsation intensity of the working pulsed column on the uranium mass transfer coefficient and holdup of the dispersed phase (X _d)	120
Table (30)-Effect of the max flux in the working pulsed column on the uranium mass transfer coefficient and the holdup of the dispersed phase (X _d)	123
Table (31)-Effect of the frequency in the working pulsed column on the uranium mass transfer coefficient and the holdup of the dispersed phase X _d	126
Table (32): Physical properties of the two operating liquid system	126
Table(33):Calculated theoretical operating parameters of the working stripping process in the designed pulsed column	128

Table (34): Effect of the pulsation intensity of the working pulsed column on the uranium stripping efficiency and the holdup	129
Table (35)-Effect of the maximum flux on the uranium stripping efficiency in the working pulsed column	131
Table (36): Comparative analysis of uranium tri-oxide product prepared via different solvents	135
