1999

ACKNOWLEDGMENT

First of all, great thanks are due to God.

I wish to express my deepest gratitude and appreciation to Dr. Niveen El Hefnawy, Assistant Professor of Clinical Pathology, Cancer Institute, Cairo University; for her great efforts and sincere support throughout this study. She offered me without any limitation all the scientific information I needed. Her friendly attitude, meticulous supervision will never be forgotten. Without her help, this work would have never been completed.

To Dr. Lohna Refaat, Lecturer of Clinical Pathology, Cancer Institute, Cairo University. My sincere thanks are due to her. She spent tremendous time and effort to go through every item of this thesis with great patience. Her comments and advice were always a source of enlightenment, she helped me formulate and revise my ideas for the better.

To Dr. Naglua Ismail, Lecturer of Clinical Pathology, Human Genetics Dept. National Research Center. I am greatly indebted for her continuous assistance and help during the practical part of this study. I will never forget her generosity with her precious time and efforts as well as the supply of all the scientific help I needed.

Much thanks to Dr. Eman Atia, Lecturer of Pediatric Oncology, Cancer Institute, Cairo University, for her help in collection and selection of cases. And for Dr.Faten El-Mahlawy, Fellow of Clinical Pathology, Cancer Institute, Cairo University, for her help in laboratory diagnosis and chemical analysis.

I would also like to thank all Chemical staff in Cancer Institute, Cairo University, for their help with the practical part of this study.

At this point, I would like to take the opportunity to express my deep appreciation for the many people who helped in many ways to see this work completed. The spirit of co-operation among the people in the department of Clinical Pathology at the Cancer Institute, is invaluable.

Finally, I am most grateful to Professor Dr. Moushira Erfan, Professor of Human Genetic, National Research Center, For her great assistance with the statistical part of this study.

List of Tables

Table

- 1 FAB classification of acute leukemia
- 2 Cytochemical finding in acute leukemia
- 3 Morphological feature of ALL (L1,L2,L3)
- 4 Scoring system for L1 and L2
- 5 Cytochemistry and the immunological classification of ALL
- 6 Immunological classification of ALL
- 7 Relative frequency of B-lymphoid antigen expression in
B-lineage ALL
- 8 Immunological classification of T-cell leukemic lymphoblast
- 9 Cytochemical reaction of AML
- 10 Cell markers in AML
- 11 Chromosomal abnormalities of AML
- 12 Comparison between male and female samples
- 13 Descriptive statistics of trace elements for ALL group
- 14 Descriptive statistics of trace elements for control group
- 15 Descriptive statistics of trace elements for AML group
- 16 Descriptive statistics of trace elements for control group
- 17 Comparison between ALL and control as regard biochemical
markers
- 18 Comparison between ALL and control as regard trace elements
- 19 Comparison between AML and control as regard biochemical
markers
- 20 Comparison between AML and control as regard trace elements
- 21 Comparison between AML and ALL as regards biochemical
markers

- 22 Comparison between ALL and AML as regards trace elements
- 23 Comparison between L1, L2, L3 as regards the means levels of biochemical markers
- 24 Comparison between L1, L2, L3 as regards the means levels of trace elements
- 25 Comparison between M0-1, M2, M3, M4-5 as regards the means levels of biochemical markers
- 26 Comparison between M0-1, M2, M3, M4-5 as regards the means levels of trace elements
- 27 Correlation matrix between chemical markers and trace element in AML
- 28 Significant correlation between chemical markers and trace elements in AML
- 29 Correlation matrix between chemical markers and trace element in ALL
- 30 Significant correlation between chemical markers and trace elements in ALL
- 31 Unstandardized function&correlation coefficient for elements Chosen in stepwise analysis of ALL
- 32 Percentage of correctly classified cases of ALL
- 33 Unstandardized function&correlation coefficient for elements Chosen in stepwise analysis of AML
- 34 Percentage of correctly classified cases of AML
- 35 Comparison between the means of trace elements in remission and non remission ALL cases
- 36 Comparison between the means of trace elements in remission and non remission AML cas

List of Figures

Figures

- 1 Schematic diagram showing the major parts of a flow cell
- 2 Generalized schematic of the manner in which the Ig and TCR genes rearrange as the cell mature
- 3 Scheme illustrating the antigenic profile as well as Ig and TCR gene pattern in B-cell precursor ALL, B-ALL, T-ALL
- 4 Main site where Se-methylselenocystine and dimethylselenoxide enter the selenium metabolic pathway
- 5 Atomic absorption spectrophotometry Perkin-Elmer 460
- 6 Comparison between ALL&control (Ca- uric acid)
- 7 Comparison between ALL&control (Chol.- LDH)
- 8 Comparison between ALL&control (Se-Co-Ze)
- 9 Comparison between AML&control (Ca- Bil- ALT)
- 10 Comparison between AML&control (Chol.- LDH)
- 11 Comparison between ALL&control (Se-Co-Ze)
- 12 Comparison between L1,L2,L3 (Ca-Uric acid)
- 13 Comparison between L1,L2,L3 (Chol.- LDH)
- 14 Comparison between L1,L2,L3 (Se-Co-Ze)
- 15 Comparison between M0-1,M2, M3, M4-5(Ca- Bil- AST)
- 16 Comparison between M0-1,M2, M3, M4-5(Chol.-LDH)
- 17 Comparison between M0-1,M2, M3, M4-5(Se-Co-Ze)
- 18 Histogram for both groups classified in the stepwise discriminant analysis for ALL samples
- 19 Histogram for both groups classified in the stepwise discriminant analysis for AML samples
