(NODCAR)

(2013)

فَالْحَمْدُ لِلَّهِ

(طه: ١١٤)

*Dedicated to
my father, mother, my brother
Mohammad and my sister
Rania*

Acknowledgment

Praise is to ALLAH, the most merciful and most gracious, who gave me the power and patience to finish this thesis.

I am in great debt to Prof. Dr. Omaila Ahmed Sammour, Professor and Head of Department of Pharmaceutics and Industrial Pharmacy, Faculty of Pharmacy, Ain Shams University for her supervision, continuous advice and encouragement during the work of this study; whose expertise, understanding and patience added considerably to my graduate experience hoping to continue my scientific future under her supervision.

I wish to express my deep gratitude and appreciation to Prof. Dr. Abd Elhameed Abd ALLAH Elshamy, Professor of Pharmaceutics and Industrial Pharmacy, Faculty of Pharmacy, Ain Shams University, for his planning, supervision, valuable advice, sincere suggestion, successful instructions and indispensable help. He is the scientific beacon that I will try to follow.

I would like to extend my deep thanks and gratitude to Prof. Dr. Demiana Ibrahim Neseem, Professor and Head of Department of Pharmaceutics, National Organization for Drug control and Research (NODCAR) for her supervision, continuous guidance, recommendations, helpful discussions, valuable suggestions, careful and exigent reading of the thesis.

*My deep appreciation to my friend **Hend Mohamed Abd Elbar** for her valuable help and support during this work. May ALLAH bless her and reward her great efforts.*

I would like to extend my deep thanks to all professors, colleagues of National Organization for Drug and Research and everyone wishing me success and supporting me to resist any hardship I had ever faced.

No words can express my gratitude to my beloved father, mother, brother Mohammad and my sister Rania who trusted that I could do something valuable. I deeply appreciate their patience, support and love throughout my entire life.

List of Abbreviations	X
List of Tables	XIV
List of Figures	XVIII
Abstract	XXIV
General Introduction	1
I. Oral Solid dosage forms (OSDs)	1
A. Advantages of fast disintegrating tablets (FDTs)	2
B. Preparation techniques of fast disintegrating tablets (FDTs)	3
C. Disintegration mechanism of fast disintegrating tablets (FDTs)	4
D. Conditions considered for selecting drug candidate	4
E. Limitations of fast disintegrating tablets (FDTs)	5
F. Structure of oral mucosa	5
II. Solubility enhancement strategies of poorly water-soluble drugs	8
A. Solubility enhancement strategies in solid dispersions (SDs)	9
1. Methods for preparing solid dispersions	9
2. Carriers used for preparing solid dispersions	10
3. Mechanism of dissolution of solid dispersion systems	12
4. Advantages of solid dispersion technology	12
5. Disadvantages of solid dispersion technology	13
B. Solubility enhancement strategies in cyclodextrins inclusion complexes (ICs)	14
1. Cyclodextrin Properties	14

List of Contents

Item	Page
2. Cyclodextrin inclusion complexes formation	16
3. Complexation techniques	17
4. Advantages of cyclodextrin inclusion complexation	18
5. Applications of cyclodextrins	19
III- Domperidone as a model drug	20
A. Domperidone (DMP)	20
B. Uses and administration	21
C. Pharmacokinetics	22
D. Adverse effects and interactions	23
Scope of Work	25
Part I: Enhancement of Solubility and Dissolution Rate of Domperidone	27
Chapter 1: Formulation and Evaluation of Domperidone Solid Dispersions	27
1. Introduction	27
2. Experimental	29
2.1. Materials and Supplies	29
2.2. Equipment	29
3. Methodology	31
3.1. Spectrophotometric analytical method of domperidone and construction of standard calibration curve	31
3.2. Phase solubility studies	31
3.3. Preparation of drug/carrier solid systems	33
3.3.1. Preparation of physical mixtures (PMs)	33
3.3.2. Preparation of solid dispersions (SDs)	33
3.3.2.1. Solvent evaporation method	33

List of Contents

Item	Page
3.3.2.2. Fusion (melting) method	34
3.4. Content uniformity of the prepared systems	36
3.5. In-vitro dissolution studies	36
3.6. Kinetic studies	37
3.7. Fourier-transform infrared spectroscopy (FTIR)	38
3.8. Differential scanning calorimetry (DSC)	38
3.9. Powder X-ray diffraction (PXRD)	38
3.10. Scanning electron microscopy (SEM)	39
4. Results and Discussion	40
4.1. Spectrophotometric analytical method of domperidone and construction of calibration curve	40
4.2. Phase solubility studies	41
4.3. Content uniformity of the prepared systems	45
4.4. In-vitro dissolution studies	47
4.4.1. Binary systems	49
4.4.1.1. Domperidone/PEG 8000 systems	49
4.4.1.2. Domperidone/urea systems	51
4.4.1.3. Domperidone/PVP K30 systems	54
4.4.2. Ternary systems	57
4.4.2.1. Domperidone/PVP K30/Pluronic F-127 systems	57
4.4.2.2. Domperidone/PVP K30/HPMC 50 LV systems	60
4.4.2.3. Domperidone/PVP K30/PEG 8000 systems	63
4.5. Kinetics studies	67
4.6. Fourier-transform infrared spectroscopy (FTIR)	70
4.7. Differential scanning calorimetry (DSC)	71
4.8. Powder X-ray diffraction (PXRD)	73

List of Contents

Item	Page
4.9. Scanning electron microscopy (SEM)	76
5. Conclusion	78
Chapter 2: Formulation and Evaluation of Domperidone Inclusion Complexes	80
1. Introduction	80
2. Experimental	82
2.1. Materials and Supplies	82
2.2. Equipment	82
3. Methodology	83
3.1. Phase solubility studies	83
3.2. Preparation of drug/ β -cyclodextrin solid systems	84
3.2.1. Preparation of physical mixtures (PMs)	84
3.2.2. Preparation of inclusion complexes (ICs) by kneading method	85
3.3. Content uniformity of the prepared systems	85
3.4. In-vitro dissolution studies	85
3.5. Kinetic studies	85
3.6. Physicochemical characterization	86
4. Results and Discussion	87
4.1. Phase solubility studies	87
4.2. Content uniformity of the prepared systems	91
4.3. In-vitro dissolution studies	92
4.3.1. Binary systems	92
4.3.2. Ternary systems	95
4.4. Kinetic studies	99
4.5. Fourier-transform infrared spectroscopy (FTIR)	102
4.6. Differential scanning calorimetry (DSC)	105

List of Contents

Item	Page
4.7. Powder X-ray diffraction (PXRD)	108
4.8. Scanning electron microscopy (SEM)	111
5. Conclusion	114
Part II: Formulation and Evaluation of Fast Disintegrating Oral Tablets Containing Domperidone Solid Dispersion	116
1. Introduction	116
2. Experimental	121
2.1. Materials and Supplies	121
2.2. Equipment	121
3. Methodology	123
3.1. Preparation of fast disintegrating oral tablets of domperidone	123
3.2. Evaluation of flow properties of powder blends before tableting	126
3.2.1. Angle of repose (α)	126
3.2.2. Powder density	127
3.3. Evaluation of the prepared fast disintegrating oral tablets of domperidone	128
3.3.1. Content uniformity	128
3.3.2. Weight variation	129
3.3.3. Uniformity of thickness and diameter	129
3.3.4. Hardness	129
3.3.5. Friability	130
3.3.6. Determination of moisture content	130
3.3.7. In-vitro disintegration time	131
3.3.8. In-vivo disintegration time (disintegration test in oral cavity)	131
3.3.9. Dispersion time	132

List of Contents

Item	Page
3.3.10. In-vitro dissolution studies	132
3.4. Accelerated and long term stability studies of the selected domperidone formula	133
4. Results and Discussion	135
4.1. Composition of the prepared fast disintegrating oral tablets of domperidone	135
4.2. Evaluation of flow properties of powder blends before tableting	135
4.2.1. Angle of repose (α)	135
4.2.2. Powder density	136
4.3. Evaluation of the prepared fast disintegrating oral tablets of domperidone	137
4.3.1. Content uniformity	138
4.3.2. Weight variation	138
4.3.3. Uniformity of thickness and diameter	139
4.3.4. Hardness	139
4.3.5. Friability	139
4.3.6. Determination of moisture content	140
4.3.7. In-vitro disintegration, in-vivo disintegration and dispersion times	142
4.3.7.1. Influence of glycine concentration	142
4.3.7.2. Influence of effervescent base concentration	143
4.3.7.3. Influence of binders type	145
4.3.8. In-vitro dissolution studies	147
4.4. Accelerated and long term stability studies of the selected domperidone formula (F ₆)	150
4.4.1. Accelerated stability study	150
4.4.2. Long term stability study	158
