## **THE ROLE OF ENVIRONMENTAL COMPATIBLE MATERIALS FOR ACHIEVING THE ENVIRONMENTAL DESIGN CONCEPT**

A Master's Degree Thesis  
Under Supervision of:

**Prof. Dr. Hazem Hamed Ewais**

Professor of Urban Planning and Architecture  
Architecture department – Faculty of Fine Arts

**Prof. Dr. Hoda Abdel Kader Azzam**

Professor of Urban Planning and Architecture  
Architecture department – Faculty of Fine Arts

Presented By:

**Mai Alaa Eldin Mohammad Karram**

Demonstrator in the department of Architecture  
Faculty of Fine Arts - Alexandria University

**2009**

## ACKNOWLEDGEMENTS

I would like to express my gratitude to my supervisors:

Prof. Dr. Hoda Abdel Kader Azzam for her continues support, guidance, encouragement and her interest throughout the development of this thesis. And also Prof. Dr. Hazem Hamed Ewais for his help and support.

I must also express my gratitude to Dr. Salah Eldin Haridy for his helpful support in this research, and also express my gratitude to my colleagues especially Eng. Ahmad Hasan and Eng. Raham Ahmad and every one who was by my side in this work.

I would like as well to express my great thanks to my mother, father, brother and husband, who always were very patient with me and encouraged me a lot through this work.

Dedicated to my  
***Mother***

<b>Introduction.....</b>	<b>1</b>

### **Part One: An Approach to Environmentally Compatible Materials**

#### **Chapter 1: Definition of Environmentally Compatible Materials and their Green Features.**

<b>1-0: Introduction.....</b>	<b>3</b>
<b>1-1: Principles of environmental concept.....</b>	<b>3</b>
1-1-1: Healthful interior environment.....	3
1-1-2: Energy efficiency.....	3
1-1-3: Ecologically safe materials.....	3
1-1-4: Environmental form.....	3
1-1-5: Good design.....	3
<b>1-2: Compatibility concept of environmental materials.....</b>	<b>4</b>
<b>1-3 : Life cycle phases of environmental compatible materials.....</b>	<b>4</b>
1-3-1: Pre-Building Phase.....	6
1-3-1-1: Increased exploitation of smaller sources of raw materials:.....	6
1-3-1-2: Greater attention to unused resources and waste production:.....	6
1-3-1-3: Increased exploitation of rich fields of researches:.....	8
1-3-1-4: Increased use of renewable resources:.....	8
1-3-1-5: Increased recycling of waste products during production;.....	8
1-3-2: Building Phase.....	8
1-3-2-1: Economical construction:.....	8
1-3-2-2: Reduced loss of building materials:.....	8
1-3-2-3: High durability:.....	9
1-3-3: Post-Building Phase.....	10
1-3-3-1: Definition of recycling process:.....	10
1-3-3-2: Levels of recycling process:.....	10
1-3-3-3: Assembly for disassembly (ADISA) principle:.....	12
<b>1-4: Green features of environmentally compatible materials along their life cycle</b>	<b>15</b>
1-4-1: Manufacturing Process (MP).....	16
1-4-1-1: Waste Reduction (WR):.....	16
1-4-1-2: Pollution Prevention (P2):.....	17
1-4-1-3: Recycled Content (RC):.....	17
1-4-1-4: Embodied Energy Reduction (EER):.....	17
1-4-1-5: Natural Materials (NM):.....	17
1-4-2: Building operations (BO).....	18
1-4-2-1: Energy Efficiency (EE):.....	18
1-4-2-2: Water Treatment/conservation (WTC):.....	18
1-4-2-3: Use of non-toxic or less-toxic materials (NT):.....	19
1-4-2-4: Renewable Energy Source (RES):.....	20
1-4-2-5: Longer Life (LL):.....	20

1-4-3: Waste Management (WM).....	20
1-4-3-1: Biodegradability (B):.....	20
1-4-3-2: Recyclability (R): .....	20
1-4-3-3: Reusability (RU): .....	20
<b>1-5: Conclusion .....</b>	<b>22</b>
<b>Chapter 2: Green Features of both of Conventional and Innovative Environmentally Compatible Materials.</b>	
<b>2-0: Introduction.....</b>	<b>23</b>
<b>2-1: Green features of conventional environmentally compatible materials .....</b>	<b>23</b>
2-1-1: Definition of conventional environmentally compatible materials .....	23
2-1-2: Examples for conventional environmentally compatible materials:.....	23
2-1-3: Green features of examples for conventional environmentally compatible materials: .....	23
2-1-3-1 Green features of brick: .....	24
2-1-3-2 Green features of aluminum: .....	26
2-1-3-3 Green features of limestone:.....	29
2-1-3-4 Green features of concrete.....	31
<b>2-2: Green features of innovative environmentally compatible materials:.....</b>	<b>34</b>
2-2-1 Definition of innovative environmentally compatible materials .....	34
2-2-2 Examples for innovative environmentally compatible materials .....	35
2-2-2-1 Smart materials:.....	35
2-2-2-1-1 Definition of smart materials: .....	35
2-2-2-1-2 Elements of smart materials:.....	36
2-2-2-1-3 Characteristics of smart materials: .....	36
2-2-2-1-4 Types of smart materials: .....	38
Type 1 - Property of changing in Smart materials: .....	39
Type 2 - Energy exchanging in smart materials:.....	43
2-2-2-1-5 Green features of smart materials: .....	49
2-2-2-1-6 Applications for using smart sustainable materials:.....	51
2-2-2-2 Nanomaterials:.....	54
2-2-2-2-1 Definition: .....	54
2-2-2-2-2 Categories of nanomaterials:.....	55
2-2-2-2-3 Classification of nanomaterials:.....	55
2-2-2-2-4 Green features of nanomaterials:.....	56
2-1-2-2-5 Applications for using environmental nanomaterials: .....	56
<b>2-3: Conclusion .....</b>	<b>61</b>
<b>Chapter 3: The Relation between Environmental Concept and its Environmental Forces.</b>	
<b>3-0: Introduction.....</b>	<b>62</b>
<b>3-1: Definition of environmental forces .....</b>	<b>62</b>
<b>3-2: Classification of environmental forces .....</b>	<b>62</b>
3-2-1: Thermal force.....	63
3-2-2: Lighting force .....	63
3-2-3: Acoustics force .....	63
3-2-4: Water & waste force .....	63

<b>3-3: Environmental forces of building envelope:</b>	<b>64</b>
<b>3-4: The integration between environmental concept and thermal force:</b>	<b>65</b>
3-4-1: Categories of thermal force:	65
3-4-2: Strategies of heating systems:	65
3-4-3: Strategies of passive cooling systems	68
<b>3-5: The integration between environmental concept and lighting force:</b>	<b>69</b>
3-5-1: Types of lighting systems	69
3-5-2: Strategies of lighting systems	69
3-5-3: Strategies of natural lighting	70
3-5-4: Strategies of artificial lighting	71
<b>3-6: Conclusion</b>	<b>73</b>

## Part Two: Impact of Using Environmental Compatible Materials on Building Envelope to Control on the Environmental Forces

<b>Introduction</b>	<b>74</b>
---------------------	-----------

## Chapter 4: Environmental Compatible Materials as Controllers on Thermal Force of a Building

<b>4-0: Introduction</b>	<b>75</b>
<b>4-1: Materials of building envelope for heating systems:</b>	<b>75</b>
4-1-1 Thermal mass materials:	75
4-1-1-1 Criteria of selecting the thermal mass materials:	76
4-1-1-2 The design requests of thermal mass materials:	78
4-1-1-3 Examples of thermal mass materials:	79
4-1-2 Thermal insulation materials:	97
4-1-2-1 Criteria of selecting thermal insulation materials:	99
4-1-2-2 The design requests of thermal insulation materials:	100
4-1-2-3 Examples for thermal insulation materials:	100
4-1-2-3-1 Loadbearing thermal insulation materials (structure):	101
4-1-2-3-2 Non-loadbearing thermal insulation materials:	110
4-1-3 Glazing for thermal gain systems:	121
4-1-3-1 Glazing design requests for thermal gain systems:	121
4-1-3-2 Glazing examples for thermal gain systems:	121
4-1-4 The calculations of composite thermal walls design (thermal mass and insulation material):	124
4-1-4-1 The total thermal transmittance (U- value) calculations:	125
4-1-4-2 Thermal Time Constant (TTC) Calculations:	126
<b>4-2: Materials of building envelope for cooling systems</b>	<b>128</b>
4-2-1: Thermal mass materials	128
4-2-2: Thermal insulation materials	128
4-2-3: Glazing for cooling systems	128
4-2-3-1 Shading elements:	128
4-2-3-1-1 Fixing of Shading:	129
4-2-3-1-2 Fixing of Shading:	134
4-2-3-2: Ventilation:	135
4-2-3-3: Insulation:	135
<b>4-3: Conclusion</b>	<b>140</b>

## **Chapter 5: Environmental Compatible Materials as Controllers on Lighting Force of a Building**

<b>5-0: Introduction.....</b>	<b>142</b>
<b>5-1: Types of lighting force .....</b>	<b>142</b>
<b>5-2: The design criteria of lighting systems.....</b>	<b>142</b>
5-2-1 The design criteria of natural lighting:.....	143
5-2-2 The design criteria of artificial lighting: .....	144
<b>5-3: Materials of building envelope for lighting systems .....</b>	<b>144</b>
5-3-1 Natural lighting systems: .....	144
5-3-2: Natural lighting materials for.....	147
5-3-2-1-1 Glass with coating films: .....	148
5-3-2-1-2 Switchable glass (smart glass): .....	151
5-3-2-1-3 Multiple glass:.....	151
5-3-2-1-4 Cavity glazing: .....	152
5-3-2-1-5 Transparent plastics: .....	153
5-3-2-2 Materials of reflecting surfaces (shelves):.....	153
5-3-2-3 Glazing for optical daylight systems: .....	154
5-3-2-3-1 Tubular skylights: .....	155
5-3-2-3-2 Optical fibers:.....	156
5-3-2-4 Translucent mass materials:.....	157
5-3-2-4-1 Translucent Concrete: .....	157
5-3-2-4-2 Prada foam: .....	157
5-3-3 Artificial lighting systems:.....	158
5-3-4 Artificial lighting materials for: .....	159
5-3-4-1 Lamps with low power consumption: .....	159
5-3-4-1-1 Incandescent light bulb with dimmer:.....	159
5-3-4-1-2 Fluorescent:.....	161
5-3-4-1-3 High Intensity Discharge (HID): .....	162
5-3-4-1-4 Light Emitting Diode (LED):.....	164
5-3-4-2 Lamps with lighting controls:.....	165
5-3-4-2 -1 Lighting controls components: .....	166
5-3-4-2-2 Lighting controls categories:.....	166
5-3-4-2-2-1 Occupancy detectors:.....	168
5-3-4-3 Lamps with sustainable energy for producing electricity: .....	171
5-3-4-3-1 Wind energy:.....	171
5-3-4-3-2 Solar energy: .....	172
5-3-4-3-3 Waste energy:.....	174
5-3-5 Integration between natural and artificial lighting:.....	175
5-3-5-1 Location: .....	177
5-3-5-2 Shielding:.....	177
5-3-5-3 Control: .....	177
5-3-5-4 Color:.....	177
<b>5-4: Conclusion .....</b>	<b>178</b>

## **Part Three: Applications for Using Environmentally Compatible Materials**

### **Chapter 6: Example for using Environmentally Compatible Materials to control on Environmental Forces (Mont Cenis Training Centre)**

<b>6-0 Introduction .....</b>	<b>179</b>
-------------------------------	------------

<b>6-1: The data of project "Mont Cenis Training Centre" .....</b>	<b>179</b>
<b>6-2: The environmental design concept .....</b>	<b>180</b>
<b>6-3: Strategies of controlling the environmental forces .....</b>	<b>181</b>
6-3-1: Thermal system strategies .....	181
6-3-1-1 The Strategy of heating system:.....	181
6-3-1-2 The strategy of cooling system: .....	182
6-3-2 Lighting system strategies.....	183
6-3-2-1 Natural lighting strategy: .....	183
6-3-2-2 Artificial lighting strategy:.....	183
<b>6-4: Materials and construction of building .....</b>	<b>184</b>
6-4-1 Structure of microclimatic envelope: .....	184
6-4-2: Building envelope .....	185
6-4-2-1 Façade elements:.....	185
6-4-2-2 Roof elements: .....	187
6-4-2-3 Services elements:.....	188
<b>6-5: Environmental assessment of building performance.....</b>	<b>190</b>
6-5-1: Energy use of microclimatic envelope.....	190
6-5-2: Temperature .....	190
6-5-3: Natural ventilation.....	191
<b>6-6: Conclusion.....</b>	<b>191</b>

## **Chapter 7: Assessment of Environmental Architecture Performance for Environmentally Compatible Materials**

<b>7-0: Introduction.....</b>	<b>192</b>
<b>7-1: Concept of assessment.....</b>	<b>192</b>
<b>7-2: Elements of assessment.....</b>	<b>193</b>
7-2-1: Physical properties .....	193
7-2-1-1: Natural properties (non-environmental properties) .....	193
7-2-1-2: Natural properties (environmental properties).....	194
7-2-2: Climate considerations .....	194
7-2-2-1: Temperature.....	194
7-2-2-2: Sun .....	194
7-2-2-3: Rain.....	194
7-2-2-4: Wind .....	194
7-2-2-5: Humidity .....	195
7-2-3: Architectural requirements.....	196
7-2-3-1: Function .....	196
7-2-3-2: Form:.....	197
<b>7-3: Description of assessment.....</b>	<b>197</b>
<b>7-4: Concept of assessment.....</b>	<b>199</b>
7-4-1 Assessment of environmental compatibility for thermal mass materials: .....	201
7-4-2 Assessment of environmental compatibility for thermal insulation materials:.....	201
7-4-3 Assessment of environmental compatibility for glazing materials: .....	201
7-4-4 Assessment of environmental compatibility for louvers materials: .....	201
7-5: Conclusion.....	208

## LIST OF FIGURES

### Figure no.

#### **Chapter 1: Definition of Environmentally Compatible Materials and their Green Features.**

1.1: Elements of compatibility for environmental materials.....	4
1.2: Life Cycle analysis of environmentally compatible materials.....	5
1.3: The three Life Cycle phases of materials.....	5
1.4: Examples for re-evaluated resources.....	7
1.5: Diagram refers to the three principles of (ADSIA).....	12
1.6: Sharing layers of change.....	12
1.7: a-Multimaterial component.	
b-monomaterial component.....	14
1.8: Design processes and life cycle phases of material.....	14
1.9: Diagram for green features.....	15
1.10: Percentages for the different reusing ways of rainwater.....	18
1.11: Rainshow shower & bath filters.....	19
1.12: Process of recycling rainwater .....	19
1.13: Reusing glass bottles in constructing a wall.....	20

#### **Chapter 2: Green Features of both of Conventional and Innovative Environmentally Compatible Materials.**

2. 1: The six general phases of brick manufacturing .....	24
2. 2: Aggregates from brick used in infrastructure works.....	25
2. 3: Aggregates for in-situ and precast concrete and mortars.....	25
2. 4: Reusing old brick in new buildings.....	25
2. 5: Life cycle of Aluminum .....	26
2. 6: The steps of bauxite mining .....	27
2. 7: Conference Centre, Glasgow designed by Foster & Partners, constructed from aluminum shells.....	28
2. 8: Drinkers cans which can be recycled.....	28
2. 9: A 27 tonne ingot made from approximately 1.5 million used drinks cans.....	29
2.10: The heavy equipments which are used in extracting limestone.....	30
2.11: Phases in the life cycle of a concrete .....	31
2.12: Casting of self compacting concrete.....	33
2.13: The original shape of material(in yellow)the transformed shape (in red)....	35
2.14: Thermochromic wall of "housewarming" exhibition.....	39
2.15: Covering for chairs from thermochromic material (HeatSeats) .....	39
2.16: Construction of type of SRT .....	40
2.17: (a) The picture is an SRT laminate	
(b) The blue film at 75°C .....	40
2.18: photochromic windows respond to changes in light.....	40
2.19: Isometric section illustrates the basic design of an electrochromic device.....	41
2.20: Flip a switch and an electrochromic window .....	41
2.21: Schematic diagram of a five-layer electrochromic coating . .....	42
2.22: The parts (5 layers) that make up SPD light-control windows:.....	42
2.23: SPD light-control window before and after passing an electrical current....	43

2.24: One unit of photovoltaic cell.....	43
2.25: Outside surface covered in 460 BIPV modules - Photovoltaic 'tree' .....	43
2.26: Types of photovoltaics.....	44
2.27: Light emitting diodes.....	44
2.28: LEDs are produced in an array of shapes and sizes.....	45
2.29: The 1,500 foot long LED display .....	45
2.30: Using Phosphorescence materials to achieve Safety in public buildings and at workplaces at night times.....	45
2.31: Examples for using Flexible Electroluminescent cables. ....	45
2.32: Examples of laser types (basic principle).....	46
2.33: Behavior of piezoelectric materials.....	47
2.34: In a Peltier device an input electrical current .....	47
2.35: Microscopic Diagram of the Shape Memory Effect.....	48
2.36: A sample of "smart" plastic .....	48
2.37: This series of images show how the biodegradable shape memory polymer transforms from the temporary shape .....	49
2.38: The convergence of parts of the smart and sustainable domains.....	49
2.39: Integrating a building's technology systems and constructing a sustainable or "Green" building.....	50
2.40: BIPV system diagram.....	51
2.41: The 1,200m <sup>2</sup> photovoltaic wall curves from the roof to the ground.....	52
2.42: Evacuated Tube Solar Thermal Awning, Los Gatos CA.....	52
2.43: Photovoltaic shingles look similar to asphalt shingles .....	52
2.44: System of using PVs in generating electricity, and producing hydrogen to power fuel cell buses.....	53
2.45: Semi-Transparent PV Skylight.....	53
2.46: Ricoh Stadium.....	54
2.47: A picture of nanofibers shown with a human hair for reference.....	54
2.48: Anti-Reflection (AR) Coated Glass for Solar .....	56
2.49: Antireflective Glass for PV, Display, Framing, Lighting.....	57
2.50: Cubes from aerogel (frozen smoke or blue smoke).....	57
2.51: Aerogel insulating a flower from a Bunsen burner flame.....	57
2.52: Installed pipes with aerogel (two layers of 4 mm). ....	58
2.53: Aerogel interior wall panels .....	58
2.54: The slim solar panels were fixed on building roof.....	59
2.55: Section in aerogel window.....	59
2.56: Surface of Superhydrophobic wood "Lotus Spray".....	60
2.57: The Superhydrophobic wood surface appearance under microscope.....	60
2.58: The left tile is normal (not clean). ....	60
2.59: Phases of self cleaning glass. ....	61
2.60: The difference between standard glass and treated glass (self-cleaning glass) after one year of exposure.....	61

### **Chapter 3: The Relation between Environmental Concept and its Environmental Forces.**

3.1: Categories of environmental forces and their elements.....	62
3.2: The general and environmental requirements of building envelope.....	64
3.3: Types of lighting (natural, artificial lighting).....	69
3.4: Strategies of natural lighting according to their types.....	71
3.5: Strategies of artificial lighting according to their types.....	72

## Chapter 4: Environmental Compatible Materials as Controllers on Thermal Force of a Building

4.1:	Thermal mass in winter (store heat during the day and re-emit it at night)..	75
4.2:	The influence of thermal mass.....	76
4.3:	Chart illustrates the relation between different thickness for materials and their diurnal heat capacity (dhc).....	77
4.4:	Time lag hours of material along the day hours.....	77
4.5:	Using plants and shading elements in the southern elevations to avoid the over heating in summer.....	78
4.6:	Size south-facing overhangs to properly shade windows.....	79
4.7:	The three types of stone and examples for these types.....	80
4.8:	Southern wall from stone, used in direct gain system.....	82
4.9:	a) 1 <sup>st</sup> layer, Trombe wall from stone (inside the steel grid).2 <sup>nd</sup> layer, glazing.....	83
4.10:	In this building the spaces that are related to the sunspace are constructed from stone (walls and floors).....	83
4.11:	Types of loam building materials.....	85
4.12:	Loam using as thermal mass.....	85
4.13:	Shape of the newly developed unburned clay block.....	86
4.14:	In this building direct gain system achieved with glazing area for south façade and thermal mass from loam.....	87
4.15:	translucent concrete blocks.....	88
4.16:	Trombe wall from treated concrete.....	90
4.17:	Sunspace attached to concrete wall and concrete floor.....	90
4.18:	The hole for collecting rain water in the rain water storage. ....	91
4.19:	Units of water wall. In the side of wall, points of locking between units could appear. ....	91
4.20:	(a) Thermal curtain wall with water tube storage (b) Water wall modules by one design inc. ....	92
4. 21:	Examples for constructing water wall from plastic which is related to the building.....	92
4.22:	using water wall glazing tanks beneath south-facing windows.....	92
4.23:	Rolls filled with phase change material.....	94
4.24:	Gypsum PCM SmartBoard as a front wall plus a Micronal PCM SmartBoard-modified chilled ceiling.....	94
4.25:	Blades filled with a phase change material .....	94
4.26:	SmartBoard plasterboard has a thickness of only 1.5 cm, of the storage....	94
4.27:	The two uses of panel strikes.....	95
4.28:	The fine tubes set at right angles between two sheets of glass that cover the two sides of tubes.....	95
4.29:	Cross section in the plastic translucent thermal insulation.....	96
4.30:	The system of heat transmission (the wall is screened with curtain).....	96
4.31:	Mechanisms for heat transfer (conduction, convention and radiation).....	97
4.32:	Difference between the outdoor temperature changing along time of day, and the indoor temperature .....	98
4. 33:	Passage of heat through thermal bridges.....	100
4.34:	movable insulation at building windows to prevent heat loss.....	100
4.35:	Examples of thermal insulators types.....	101
4.36:	Foamed Concrete.....	102
4.37:	Porous of aerated concrete panels.....	103

4.38: Interlocking aerated Concrete blocks.....	103
4.39: Panels and Blocks based on lightweight aggregate mixes.....	104
4.40: Fly ash talcum powder.....	104
4.41: Fly Ash Contributes to Concrete Durability and Strength.....	105
4.42: Types of straw according to their construction method, and their loadbearing classification.....	107
4.43: Dimensions and form of two-wires straw bale.....	108
4.44: Build a rubble trench foundation .....	108
4.45: Loadbearing wall constructed from straw bales.....	109
4.46: Indirect gain windows, thermal mass floor, straw bale walls.....	109
4.47: Using straw bales as a structural material (load-bearing).....	109
4.48: classification of non-loadbearing insulation materials occurred to their raw materials.....	110
4.49: IR absorber modified Polystyrene.....	111
4.50: The principle of infrared absorber.....	111
4.51: Sheets of foamglass and glasswool (used here as a wall insulator).....	111
4.52: Layers of vacuum insulation panel.....	112
4.53: Open-pore melamine resin foam: the pores that enable the exchange of gas are clearly visible.....	112
4.54: Light-permeable thermal insulation panel, filled with Aerogel.....	112
4.55: Post-and-beam framing for straw bale walls. The straw bales are stacked like bricks in this post-and-beam structure.....	113
4.56: Using metal wire to further tighten the metal lath after it has been sewn into place. ....	114
4.57: plastering the lower half of each wall from the ground, and did the upper half on scaffolding. ....	114
4.58: Steps of strawboards production.....	115
4.59: An example for using straw boards as wall insulators and interior partition. ....	115
4.60: Roof building thatched with straw.....	115
4.61: Cellulose fibers.....	116
4.62: Types of loam building materials.....	116
4.63: Boards of non-loadbearing loam.....	117
4.64: Processing loam plaster by machine.....	117
4.65: Boards of expanded polyurethane foam.....	117
4.66: Using polyurethane boards as building skin.....	118
4.67: Building skin from polyurethane(seamless, monolithic appearance)...118	118
4.68: The four types of transparent thermal insulation materials.....	118
4.69: The front elevation of the bus terminal that it consists entirely of polystyrene foam. ....	119
4.70: Deformation of polystyrene building skin to be used as existing benches.....	119
4.71: The performance of a typical single clear glass.....	121
4.72: The performance of a typical double-glazed unit with two layers of clear glass.....	121
4.73: Transfer of heat through low-E double glazing system.....	122
4.74: The performance of a window with a very low heat loss rate (low U-factor). ....	122
4.75: The interface of the software application that calculates U-value. ....	126
4.76: Case #1: wall with external insulation.....	127
4.77: Case #1: wall with internal insulation.....	127

4.78: Thermal mass in summer absorb heat during the day and allow cool night breezes.....	128
4.79: shading systems (fixing – position).....	129
4.80: Fixed shading to south façade can achieve sun protection along the day.....	129
4.81: The relationship between sun altitudes in summer and winter, and the suitable louver angle for them. ....	129
4.82: Movable glass louvered sun screening system in summer and winter...130	
4.83: Example for sun sensor.....	130
4.84: Example for battery pack system.....	131
4.85: Example for Movable aluminum louvers.....	131
4.86: Example for Movable glass louvers.....	132
4.87:Example for Movable fabric louvers.....	132
4.88:Examples for Movable acrylic louvers.....	132
4.89: the five systems of movable louvers installation.....	133
4.90: Types of insulating glass. (The shaded types are the related types to thermal insulation). ....	136
4.91: The photovoltaic double-glazed systems of heat-reflective glass in summer and winter.....	136
4.92:Types of Window Frames.....	138

## Chapter 5: Environmental Compatible Materials as Controllers on Lighting Force of a Building

5.1: Types of lighting types (natural, artificial lighting).....	142
5.2: Systems of natural lighting.....	144
5.3: Glass types (according to their light force control).....	147
5.4: Difference between reflection of glass and reflection of AR film.....	148
5.5: Single layer AR coating on a transparent substrate (glass).....	149
5.6: A three layer AR coat can be thought of as a central layer with single layer anti-reflection each side.....	149
5.7:How the UV coating works. The UV COATING reduces the ultra-violet component of the emission light to a negligible value.....	150
5.8: Difference between reflection of glass and reflection of AG film.....	150
5.9: a)Glass is switched off (the liquid crystals.....	151
5.10: Multiple glass types (systems).....	152
5.11: performance of light reflection on highly reflective shelve (incidence angle $\theta_1$ = reflection angle $\theta_2$ ).....	153
5.12: Reflectance values for some painting colors . Colors with high values are suitable to be shelves.....	145
5.13:Reflectance values for common building materials. Materials with high values are suitable to be shelves.....	145
5.14: Light reflectance value (LRV ) runs on a scale from 0% to 100%.....	154
5.15: light shelves (from inside) with high reflectance, used to reflect sunlight onto the interior spaces (painted with white).....	154
5.16: performance of light reflection inside the tubular skylights (incidence angles from $40^\circ$ to $13.8^\circ$ ).....	155
5.17: Section in a roof building with tubular skylight, the three components appears.....	155
5.18: The sun pipes in the british school in Abu Dhabi.....	155
5.19: Fiber Optic Total Internal Reflection.....	156

5.20: The two main types of fiber.....	156
5.21: Difference between graded-index multimode, step-index multimode and single-mode optical fibers.....	156
5.22: The two main types of fiber.....	157
5.23: Prada foam used as a wall in a store. Light passes through hollows in concrete.....	157
5.24: Systems of artificial lighting (According to achievement of environmental concept).....	158
5.25: Assorted types of fluorescent lamps. Top, two Compact fluorescent lamps, bottom, two regular tubes. Matchstick shown for scale.....	161
5.26: Different high pressure sodium lamps.....	163
5.27: Different HID metal halide lamps.....	163
5.28: Blue, green, and red LEDs.....	164
5.29: Close-up of a typical LED in its case, showing the internal structure.....	164
5.30: Light control components and their functions. ....	166
5.31: The three components (Inputs, Decision-making (master lighting controller), Outputs) of some lighting control systems.....	167
5.32: Occupancy sensor control system (The relationship between the power supply, relay, controller and motion detector).....	168
5.33: Infrared Sensor Coverage Patterns.....	169
5.34: Ultrasonic Sensor Coverage Patterns.....	169
5.35: Typical sensitivity pattern for wall-mounted ultrasonic sensor.....	169
5.36: Types and examples for sensor products.....	170
5.37: A lighting column powered by wind turbine. ....	172
5.38: Solar Tree seat and light.....	172
5.39: Lighting units with self-charging from solar energy – used in outdoor lighting.....	172
5.40: Lighting unit with PIR Solar (Post-Wall Light) made from Stainless Steel.....	173
5.41: a) The interior of the hall during the daytime . b) The interior of the hall at night time, showing the similarity in lighting conditions from both daylighting and artificial lighting.....	174
5.42: Daylight factor distribution through Brune park.....	174
5.43: microbial fuel cell (bacteria cell).....	174
5.44: Dry steam power plant system.....	175

## **Chapter 6: Example for using Environmentally Compatible Materials to control on Environmental Forces (Mont Cenis Training Centre)**

6.1: Site plan of project.....	179
6.2: Cross section in the project, showing the environmental requirements that achieved by the building envelope ‘glazed envelope’. ....	180
6.3: Section in the building illustrates heating strategy in winter.....	181
6.4: Section in the building illustrates cooling strategy in summer.....	182
6.5: Lightshelves on the inner building façade.....	183
6.6: Image from inside the truncated cones of library.....	183
6.7: Detail in the connection between column and beam (steel connection), and cables between structure elements. ....	184
6.8: The timber structure is reminiscent of Victorian boat building sheds (columns and beams).....	184

<b>6.9:</b>	The western elevation of building with its glazing area and photovoltaic cells.....	185
<b>6.10:</b>	The louvered openings and roof vents on the building façade. ....	186
<b>6.11:</b>	Photovoltaic cells shading on floor and building walls.....	186
<b>6.12:</b>	Image for photovoltaic cells (of facades) from inside the building. (translucent).....	186
<b>6.13:</b>	The combination between glazing and photovoltaic cells in building roof. Glazing is opened in some positions to exhaust the warm air .....	187
<b>6.14:</b>	The photovoltaic cells that are installed on the roof.....	187
<b>6.15:</b>	The distribution of photovoltaic cells on the roof. (Clear glass over the central thoroughfare).....	188
<b>6.16:</b>	Air image for the roof with the varying densities of photovoltaic panels that seemed to be <<clouds>>.....	188
<b>6.17:</b>	The chart shows how the temperature varies in different season.....	190
<b>6.18:</b>	Simulation of air movement in the glass house. ....	191

## **Chapter 7: Assessment of Environmental Architecture Performance for Environmentally Compatible Materials**

<b>7.1:</b>	Diagram for suggested assessment of environmentally compatible materials and its compatibility combination between climate and architecture.....	192
<b>7.2:</b>	The combination between architecture and its climate, and the specified environmentally compatible material for this combination.....	193
<b>7.3:</b>	Koppen's world climate map.....	196
<b>7.4:</b>	Description of assessment.....	197
<b>7.5:</b>	Groups of environmental compatible materials and their studied physical properties.....	198
<b>7.6:</b>	Relationship between physical properties and environmental architectural assessment (inputs – outputs).....	200
