

# **Clinical Significance of Urinary Polyamines as Novel Tumor Markers in Breast Cancer**

**Thesis**

Submitted for Partial Fulfillment of Master Degree  
in Clinical and Chemical Pathology

By

**May Saher Shawki Ibrahim**

M.B., B.Ch,  
Ain Shams University

**Supervised by**

**Professor/ Nashwa Ahmed El Badawi**

Professor of Clinical and Chemical Pathology  
Faculty of Medicine – Ain Shams University

**Doctor/ Eman Saleh El Hadidi**

Assistant Professor of Clinical and Chemical Pathology  
Faculty of Medicine – Ain Shams University

**Doctor/ Hala Abdel Al Ahmed**

Lecturer of Clinical and Chemical Pathology  
Faculty of Medicine – Ain Shams University

**Faculty of Medicine  
Ain Shams University  
2010**

## **Acknowledgement**

I would like to express my deepest gratitude and appreciation to **Professor Nashwa Ahmed El Badawi**, Professor of Clinical and Chemical Pathology, Faculty of Medicine – Ain Shams University, for her great support, true encouragement and keen interest in the progress and accomplishment of this work. She generously devoted much of her great experience and provided unlimited support, effort and in depth guidance. I really appreciate all the encouragement and support given by her.

I am profoundly grateful to **Doctor Eman Saleh El Hadidi**, Assistant Professor of Clinical and Chemical Pathology, Faculty of Medicine – Ain Shams University, for her close and kind supervision, constructive criticism, meticulous revision of the thesis and continuous advice throughout the work. I am thankful for all the time and effort she gave me.

My sincere thanks and deep appreciation goes to **Doctor Hala Abdel Al Ahmed**, Lecturer of Clinical and Chemical Pathology, Faculty of Medicine – Ain Shams University, for her great help, kind advice, meticulous guidance, valuable comments and careful supervision. She gave me much of her precious time, effort and knowledge. I am deeply indebted to her.

I am also grateful to **Professor Reda Abdel Tawab Khalil**, Professor of Surgery, Faculty of Medicine, Ain Shams University, for providing me with cases for this study. Without his kind help and support this work could not have come to completion.

Last but not least I would like to thank my parents for their support and love and my friends and colleagues for their valuable help and advice.

## List of Abbreviations

AJCC	American Joint Committee on Cancer
AMD	<i>S</i> -adenosylmethionine decarboxylase
APC	Adenomatous polyposis coli
ATM	Ataxia telangectasia mutated
AUC	Area under the curve
AZ	Antizyme
AZI	Antizyme inhibitor
CA	Cancer antigen
cdks	Cyclin dependent kinases
CBC	Complete blood count
CE	Capillary electrophoresis
CEA	Carcinoembryonic antigen
CSF	Cerebrospinal fluid
dcSAM	Decarboxylated <i>S</i> - adenosylmethionine
DAX	Diamine exporter
DCIS	Ductal carcinoma in situ
DFMO	Difluoromethylornithine
DiAcSpm	<i>N</i> 1, <i>N</i> 12 diacetylspermine
Dns-Cl	Dansyl chloride
E <sub>2</sub>	Estradiol
ECLIA	Electrochemiluminescence immunoassay
ELISA	Enzyme linked immunosorbent assay
Em	Electrochemical gradient across the plasma membrane
ER	Estrogen receptor
ESR	Erythrocyte sedimentation rate
FISH	Fluorescent in situ hybridization
FN	False negative
FNA	Fine-needle aspiration
FNAC	Fine needle aspiration cytology
FP	False positive
GC	Gas chromatography

HCC	Hepatocellular carcinoma
HPLC	High performance liquid chromatography
HPTP	High-performance thin-layer plates
HRT	Hormone replacement therapy
IHC	Immunohistochemistry
IQR	Interquartile range
Kv	Voltage gated K <sup>+</sup> channels
LCIS	Lobular carcinoma in situ
MAb	Monoclonal Antibody
MAT	methionine adenosyltransferase
MRI	Magnetic resonance imaging
NPV	Negative predictive value
ODC	Ornithine decarboxylase
PAI-1	Urokinase plasminogen activator inhibitor 1
PAI-2	Urokinase plasminogen activator inhibitor 2
PAO	Polyamine oxidase
PC	Paper chromatography
PCR	Polymerase chain reaction
PIVKA-II	Protein induced by vitamin K absence/antagonist II
PPV	Positive predictive value
PRs	Progesterone receptors
PTEN	Phosphatase and tensin
RIA	Radioimmunoassay
ROC	Receiver operating characteristic
SAM	S-adenosylmethionine
SBR	Scarff-Bloom-Richardson
SD	Standard deviation
SMO	Spermine oxidase
SMS	Spermine synthase
SRM	Spermidine synthase
SSAT	Spermidine/spermine N1-acetyltransferase
TLC	Thin layer chromatography
TN	True negative

TNM	Tumor-node-metastasis
TP	True positive
tRNA	Transfer ribonucleic acid
uPA	Urokinase plasminogen activator
uPAR	Urokinase plasminogen activator membrane bound receptor

## Introduction

In Egypt, breast cancer is regarded as the most common malignancy in women, accounting for 31% of all female cancers, and responsible for 15% of female cancer deaths (*El Gezeery et al., 2008*).

Diagnosis of breast cancer is usually based on a combination known as triple diagnosis which includes physical examination of the breast and its draining lymph nodes, mammography or ultrasonography and fine needle aspiration cytology (*Donegan, 2002a*). Moreover, several tumor markers such as carcinoembryonic antigen (CEA), CA 15-3, tissue polypeptide antigen and HER- 2 have been implicated, as non-invasive useful clinical adjuncts in diagnosis and determining prognosis of breast cancer. However, it is generally agreed that the lack of diagnostic sensitivity and specificity of these tumor markers precludes their use in breast cancer (*Duffy, 2006*).

Polyamines such as putrescine, spermidine and spermine are naturally occurring organic cations that are found in plants, animals and microbes. They are formed by the enzymatic decarboxylation of the amino acids ornithine or arginine. They are essential for normal cell and tissue functions, including normal growth, development and tissue repair (*Gerner and Meyskens, 2004*).

Polyamines have generated much interest in the last few years because elevated levels of these compounds in human tissue and biological fluids have been found in various types of cancer such as hepatocellular, prostatic and gastric carcinoma. Moreover several studies have established that the urinary polyamine levels in cancer reflect the severity and clinical
