**LOCALIZATION OF THE KAPPA AND
LAMBDA LIGHT CHAINS IN REACTIVE AND
NEOPLASTIC LESIONS OF THE MUCOSA
ASSOCIATED LYMPHOID TISSUE (MALT)**

Thesis

**Submitted for the Partial Fulfillment
of the Requirement of the M.D. Degree in
Pathology**

By

Walid Mohammed Sharaf
M.B. B.Ch., M.Sc

Supervisors

Prof. Dr.

Effat Ramadan. El Sherif

Prof. of Pathology
Cairo University

Prof. Dr.

Nashwa Shafik Aggour

Prof. of Pathology
National Research Center

Prof. Dr.

Ali Ahmed El Hindawy

Prof. of Pathology
Cairo University

**FACULTY OF MEDICINE
CAIRO UNIVERSITY
2000**

AKNOWLEDGMENT

I would like to express my deepest and cordial appreciation to **Prof. Dr. Effat El Sherif**, Professor of Pathology, Cairo University, for her constant support and encouragement and whose guidance has shown me my way in this work. She gave me a lot of her experience, and new ideas.

I wish also, to acknowledge my heartfelt and deepest gratitude to **Prof. Dr. Nashwa Aggour**, Professor and Head of Pathology Department, National Research Center, for her faithful supervision, guidance and encouragement. I am also thankful for her support and interest throughout all stages of the work.

I am greatly indebted to **Prof. Dr. Aly El Hindawy**, Professor of Pathology, Cairo University, who gave me a lot of his pointfull ideas and stimulating suggestions concerning this work. He supplied me with a lot of his own experience, assistance and encouragement. The credit of bringing this work to light goes to him.

I would like to thank **Prof. Dr. Wafaa Abdel Aal**, Professor of Pathology, National Research Center and all members of the Pathology Department at the National Research Center, for their encouragement and sincere support.

TABLE OF CONTENTS

INTRODUCTION.....	1
AIM OF THE WORK	4
MUCOSA-ASSOCIATED LYMPHOID TISSUE (MALT) CONCEPT.....	5
EXTRANODAL LYMPHOMA	9
GENERAL FEATURES	9
SITES OF ORIGIN.....	10
CLASSIFICATION OF LYMPHOMA	11
GASTRITIS AND ITS CLINICAL IMPLICATIONS.....	21
NORMAL ANATOMY AND HISTOLOGY OF THE STOMACH.....	21
GASTRITIS.....	23
TYPES OF GASTRITIS AND GASTROPATHY	23
GASTROINTESTINAL LYMPHOMA AND MUCOSA ASSOCIATED LYMPHOID TISSUE (MALT).....	33
IMMUNOPHENOTYPING IN MUCOSA-ASSOCIATED LYMPHOID TISSUE (MALT).....	52
MATERIAL AND METHODS	67
I – MATERIAL.....	67
II – METHODS.....	69
RESULTS.....	75
DISCUSSION.....	103
SUMMARY.....	114
CONCLUSION AND RECOMMENDATIONS.....	116
REFERENCES.....	118

LIST OF FIGURES

Fig. 1: A normal immunoglobulin consists of a heavy chain and a light chain.....	53
Fig. 2: A Fab fragment is a piece of a particular antibody.....	54
Fig. 3: Immunophenotyping technique.....	61
Fig. 4: Immunoperoxidase light chain staining	63
Fig. 5: The equivalent study done by flow cytometry.	63
Fig. 6: A photomicrograph of a section of gastritis showing gastric crypts overlying gastric glands with mild inflammatory reaction. (H&E X 60)	89
Fig. 7: A photomicrograph of a section of antral mucosa. Showing atrophic changes with elongated gastric crypts, moderately edematous lamina propria and moderate lymphoplasmacytic infiltrate. (H&E X 100)	90
Figs. 8: A photomicrograph of a section of chronic gastritis showing gastric crypts with mucous secreting lining and scattered curved bacilli (<i>Helicobacter pylori</i>) related to surface epithelium. (H&E X 400).....	91
Figs. 9: The same previous photomicrograph (H&E X 1000[oil immersion]).....	91
Fig. 10: A photomicrograph of a section of chronic gastritis showing gastric mucosa with incomplete intestinal metaplasia with moderate lymphocytic infiltrates in the lamina propria. (H&E X 150)	92
Fig. 11: A photomicrograph of a section of chronic gastritis showing intestinal metaplasia, marked lymphocytic infiltration and lymphatic follicle. (H&E stain X 60).....	92
Fig. 12: A photomicrograph of a section of chronic gastritis showing kappa positivity in the lymphocytic infiltrates in the lamina propria (polyclonal), with no light chain restriction. (Kappa X 150)	93
Fig. 13: A photomicrograph of a section of chronic gastritis showing lambda positivity in the lymphocytic infiltrates in the lamina propria (polyclonal), with no light chain restriction. (Lambda X 150)	93
Fig. 14: A photomicrograph of a section of previously diagnosed chronic gastritis with moderate lymphocytic infiltrates showing evidence of light chain restriction, diagnosed as MALT lymphoma after immunohistochemistry (positive kappa) (Kappa X 300).....	94
Fig. 15: The same case as above showing evidence of light chain restriction (negative lambda) (Lambda X 150).....	94
Fig. 16: A photomicrograph of a section of erosive gastritis showing marked dense lymphocytic infiltrates with superficial erosion. (H&E X 60)	95
Fig. 17: A photomicrograph of a section of erosive gastritis showing partial ulceration, moderate number of polymorphs infiltrating the epithelium with moderate dense lymphocytic infiltration and partial effacement of glandular tissue. (H&EX 300)	95
Fig. 18: A photomicrograph of a section of a previously diagnosed erosive gastritis with dense lymphocytic infiltrates showing light chain restriction, diagnosed as MALT lymphoma after immunohistochemistry (positive lambda). (Lambda X 150)	96

Fig. 19: The same case as above showing evidence of light chain restriction (negative kappa). (Kappa X 150)	96
Fig. 20: A photomicrograph of a section of MALT lymphoma showing widely spaced acini partially devoid of mucous secreting activity with dense infiltration of the lamina propria by lymphocytes. (H&E X 150).....	97
Fig. 21: A photomicrograph of a section of MALT lymphoma (High power) showing dense infiltration by atypical centrocytic-like cells (CCL) showing aggression against glandular epithelium. (H&E X 300).....	97
Fig. 22: A photomicrograph of a section of MALT lymphoma showing light chain restriction (positive lambda). (Lambda X 150).....	98
Fig. 23: A photomicrograph of a section of MALT lymphoma showing light chain restriction (negative kappa). (Kappa X 150).....	98
Fig. 24: A photomicrograph of a section of MALT lymphoma showing few scattered acini, slightly distorted, significantly infiltrated by lymphocytes with dense lymphocytic infiltration in the surrounding lamina propria. (H&E stain X 150)	99
Fig. 25: A photomicrograph of a section of MALT lymphoma showing marked infiltration by CCL cells showing marked aggression against glandular epithelium with well formed lympho-epithelial lesions. (H&E X 300).....	99
Fig. 26: A photomicrograph of a section of MALT lymphoma showing light chain restriction (positive lambda). (Lambda X 300).....	100
Fig. 27: A photomicrograph of a section of MALT lymphoma showing light chain restriction (negative kappa). (Kappa X 300).....	100
Fig. 28: A Photomicrograph of a section of gastric MALT lymphoma showing marked destruction of glandular element with infiltration by CCL cells together with dense lymphocytic infiltrates with well formed lymphatic follicles. (H&E stain X 150).....	101
Fig. 29: A photomicrograph of a section of gastric MALT lymphoma showing areas with dense lymphocytic infiltration with scattered well formed lymphoid follicles. (H&E X 60).....	101
Fig. 30: A photomicrograph of a section of MALT lymphoma showing dense lymphocytic infiltration with light chain restriction (positive kappa). (Kappa X 150).....	102
Fig. 31: A photomicrograph of a section of MALT lymphoma showing dense lymphocytic infiltration with light chain restriction (negative lambda). (Lambda X 150)	102

LIST OF TABLES AND GRAPHS

Table 1 : Revised European – American Lymphoma Classification.	15
Table 2 : WHO Classification of lymphoid tumors.	18
Table 3 : Principal types and main associations of gastritis and gastropathy	25
Table 4 : Gastrointestinal lymphoma staging	34
Table 5 : Classification of Primary gastrointestinal lymphoma	41
Table 6 : The Male/Female ratio and their Mean Age	76
Table 7 : Common symptoms in MALT lymphoma and gastritis groups	76
Table 8 : Types and number of lesion with correlation to Sex.....	78
Table 9 : Helicobacter pylori organism relevance in H&E results according to sex and total number of patients	80
Graph 1 : Helicobacter pylori organism relevance according to sex and to total number of patients.....	80
Table 10 : Intestinal metaplasia relevance in H&E results according to sex and total number of patients	81
Graph 2 : Intestinal metaplasia relevance according to sex and total number of patients	81
Table 11 : The Neutrophilic activity and the density of the lymphoid population relevance according to the number of patients in MALT lymphoma and gastritis groups.....	82
Table 12 : Number of patients in each group showing H. pylori organism, Intestinal metaplasia, Neutrophilic activity and Intense density of lymphoid population. ..	83
Graph 3 : Number of patients in each group showing H. pylori organism, Intestinal metaplasia, Neutrophilic activity and Intense density of lymphoid population. ..	83
Table 13 : Kappa & Lambda immunostaining results.....	86
Graph 4 : The Kappa and Lambda light chains immunostaining results.....	86
Table 14 : Types and number of lesion with correlation to Sex (Kappa & Lambda immunostaining results)	87
Graph 5 : Diagnosis with H&E vs. Kappa and Lambda Immunostaining.....	88
