Different Modalities in management of Fractures & Fracture Dislocations of Distal Clavicle

AN ESSAY
Submitted for Partial Fulfillment of Master Degree
In
Orthopedic Surgery

By

Dr. Hussein Ahmed Nassar

M.B.B.Ch

Faculty of Medicine, Ain Shams University

UNDER SUPERVISION OF

Prof. Dr. Hesham Ahmed Fahmy
Prof. of Orthopedic Surgery
Faculty of Medicine, Ain Shams University

Dr. Ramy Ahmed Diab
Lecturer of Orthopedic Surgery
Faculty of Medicine, Ain Shams University

2013

جامعة عين شمس
كلية الطب
قسم جراحة العظام

طرق العلاج المختلفه للكسور والكسور الخلعيه فى الجزء الطرفى الخارجى لعظمة الترقوة

رسالة
توطئة للحصول على درجة الماجستير
في
جراحة العظام

مقدمة من

د. حسين احمد نصار
بكالوريوس الطب والجراحة
كلية الطب – جامعة عين شمس

تحت إشراف

أ.د/ هشام أحمد فهمى
أستاذ جراحة العظام
كلية الطب - جامعة عين شمس

د/ رامى أحمد دياب
مدرس جراحة العظام

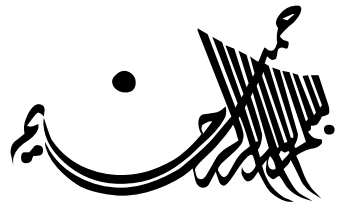
2013

بسم الله الرحمن الرحيم



"... رَبِّ أَوْزِعْنِي أَنْ أَشْكُرَ نِعْمَتَكَ الَّتِي
أَنْعَمْتَ عَلَيَّ وَعَلَى وَالِدَيَّ وَأَنْ أَعْمَلَ
صَالِحًا تَرْضَاهُ وَأَدْخِلْنِي بِرَحْمَتِكَ فِي
عِبَادِكَ الصَّالِحِينَ "

سورة النمل (من الآية 19)

To Allah, everything in life is resumed. In this work Allah has helped me a lot. He offered me what I didn't know and what I have to know. So, before I begin the acknowledgment, I must kneel thanking Allah who inspired me, took my hand and provided me with power, patience and guidance.

Acknowledgment

I wish to express my deep gratitude and hearty thankfulness to my dear parents who are always patient during the many hours devoted to my work.

It gives me honor and privilege to express my deep gratitude to Professor Dr. Hesham A. fahmy, Prof. of Orthopedic Surgery, Faculty of Medicine, Ain-Shams University, who provided the basis for this work, for his supervision and kindhearted help. He provided me with a perfect working environment and gave me every possible degree of academic freedom.

I'd like to say that words are not adequate to express exactly my own inner feelings to my supervisor Dr. Ramy A. Diab, lecturer of Orthopedic Surgery, Faculty of Medicine, Ain-Shams University. He has provided me with an ideal and inspiring research environment.

To my dear professors and colleagues at the Orthopedic Surgery Department, Faculty of Medicine, Ain-Shams University, I offer my thanks and gratitude.

May Allah bestow on them His blessings for all favors they render those who are in bad need to their fruitful and desirable help.

Hussein A. Nassar

LIST OF ABBREVIATIONS

Abbreviation	Full words
AC	Acromio-Clavicular
CC	Coraco-Clavicular
CT	Computed Tomography
DASH	Disabilities of the arm , shoulder and hand
LCP	Low Contact Plate
K-wire	Kirschner Wire
ORIF	Open Reduction and Internal Fixation
IM	Intra-Medullary
CAL	Coraco-Acromial Ligament
CP	Coracoid Process
MRI	Magnetic Resonance Image
HP	Hook Plate
KTBW	K-wire and Tension Band Wire
AO/ASIF	Association for Osteosynthesis/Association for the Study of Internal Fixation
pros - cons	Pro et contra (Latin) means for & against

LIST OF FIGURES

#	Subject	Page
2.1	Left shoulder: anterior view of the acromio-clavicular joint (**A/C** acromio-clavicular joint, **CAL** coraco-acromial ligament, **ACR** acromion, **CLAV** clavicle, **CP** coracoid process, **HH** humeral head).	4
2.2	Variation of inclination of AC and the sterno-clavicular joints.	7
2.3	Left shoulder: acromial side of the A/C joint.The entire capsule, detached from the clavicular side, is still attached at the acromial side, making the AC ligaments visible (**ACR** acromion, articular side, **AL a/c** anterior AC ligament, **IL a/c** inferior AC ligament, **PL a/c** posterior AC ligament **SL a/c** superior AC ligament)	8
2.4	**a)** Left shoulder: anterior view of the CC ligament (**A/C** AC joint, **CAL** CC ligament, **CLAV** clavicle, **CON** conoid ligament, **CP** coracoid process, TRP trapezoid ligament).**(b-d)** Proposed classification of the CC ligament based on its variant scapular attachments (types I–III).	11
2.5	Displacing forces on a lateral clavicle fracture.	13
2.6	The AC joint: The oblique surfaces would permit the clavicle to override the acromion.	14
2.7	The static stabilizers of the AC joint.	16
3.1	Type I according to Craig's Classification.	19
3.2	Type IIA According to Craig's Classification.	20
3.3	Type IIB According to Craig's Classification	20

LIST OF FIGURES (continued)

#	Subject	Page
3.4	Type III According to Craig's Classification.	21
3.5	Type IV According to Craig's Classification.	22
3.6	Type V According to Craig's Classification.	22
3.7	Classification of ligamentous injuries to the acromio-clavicular joint.	24
4.1	Standard 2-view angles: AP (A), 45° cephalad (B)	25
4.2	Position of the patient for the Zanca view 10- to 15-degree cephalic tilt of the standard view for the AC joint.	26
4.3	Technique for taking the Stryker notch view to show fractures of the base of the coracoid.	28
4.4	Normal MRI coraco-clavicular ligamentous anatomy and common types of AC joint injury.	30
5.1	Transacromial K-wire fixation.	34
5.2	K-wires fixation with tension band.	36
5.3	Fracture reduced with 4.5 mm AO malleolar screw.	37
5.4	Final placement of screw.	37
5.5	The fracture was reduced and fixed with a Knowles pin from the postero-lateral aspect of the distal fragment to the antero-medial cortex of the proximal clavicle fragment.	39
5.6	Two tension band Ethibond sutures reducing the fracture.	40

LIST OF FIGURES (continued)

#	Subject	Page
5.7	Top view showing two Ethibond sutures (front view).	40
5.8	**A**. Displaced Type II distal clavicle fracture. **B**. The transverse fracture pattern and good bone quality permitted direct ORIF using a specially designed distal clavicular plate.	41
5.9	post-operatively at 6 months prior to plate removal.	43
5.10	Illustration of superior clavicle plate position.	47
5.11	Illustration of anterior clavicle plate position.	47
5.12	T-shaped distal radius volar LCP.	49
5.13	The final construct with hardware and sutures secured.	49
5.14	**A**. For fixation of a distal clavicle fracture, the incision is made in Langer's lines with the deltotrapezial fascia split laterally. If necessary for further exposure, the deltoid is split longitudinally. **B**. A 3-mm Dacron tape is passed around the base of the coracoid and around the medial clavicular segment. **C**. While the reduction is held, a coracoclavicular stabilization screw is placed. **D.** The fracture is directly fixed with a number 5 Tevdek suture placed in tension band fashion.	52
5.15	(A and B) The Goldberg technique using No. 5 Fiberwire as cerclage around the proximal fragment and coracoid and another No. 5 Fiberwire in cerclage fashion around the fracture are shown.	53

LIST OF FIGURES (continued)

#	Subject	Page
5.16	A schematic drawing of coracoclavicular ligaments reconstruction using two suture anchors and interfragmentary fixation using nonabsorbable suture tension bands in acute distal clavicle fracture.	54
5.17	**A** The ''coracoid-hook'' around the coracoid and the suture grasper from the anterior border of the clavicle , **B** The ''coracoid-hook'' around the coracoid and the suture grasper from the anterior border of the clavicle , **C** Two #5 Fiber Wire around the coracoid , **D** The reduction of the distal clavicle fracture , **E** The double coraco-clavicular cerclage accomplished.	56
5.18	Positioning of the first double button under the coracoid process, shown in a left shoulder, with an arthroscopic view from the anterolateral portal.	58
5.19	The second double button is fixing the third fragment, shown in a left shoulder, viewed from the subacromial space far under the clavicle.	58
5.20	Preoperative and 3-month postoperative radiographs.	58
5.21	Surgical repair of a chronic type II AC joint injury.	62
5.22	Operative procedures for injuries to the AC joint.	64
5.23	Operative stabilization of an acute type III AC joint injury.	68
5.24	Repair of a type III AC joint injury with distal clavicle resection and coracoacromial ligament transfer.	70

LIST OF FIGURES (continued)

#	Subject	Page
5.25	**(a)** Preoperative X-ray showing type III acromio-clavicular dislocation; **(b)** post-operative X-ray showing correct reduction and positioning of the hook plate; **(c)** three months post-operative X-ray; **(d)** X-ray performed after plate removal; **(e)** MRI, performed 18 months after plate removal, showing healed coraco-clavicular ligaments (arrow). (	72
6.1	Lucency around the tip of the hook (subacromial osteolysis).	77
6.2	Mild asymptomatic ACJ arthrosis.	77
6.3	Extra articular ossification.	78
6.4	A broken Steinmann pin has migrated into the right lung field from its previous location in the right AC joint.	80

LIST OF TABLES

#	Subject	Page
3.1	Types of Acromio-Clavicular Dislocation	23
5.1	Pros and Cons of Operative Treatment Options for Acromio-clavicular Joint Dislocations	65
