Effect of Educational Program on Compliance of Patients with Lower Limb Ischemia Regarding Therapeutic Regimen

These

Submitted for Partial Fulfillment of the Requirement of Doctorate
Degree in Nursing Science (Medical - Surgical Nursing)

By

Sabah Ahmed Ammar

Assistant Lecture in Medical Surgical Nursing Department,
Faculty of Nursing Helwan University

Under Supervisions of

Professor. Dr. Magda Abd Elaziz Mohamed

Professor of Medical Surgical Nursing, Faculty of
Nursing – Ain Shams University

Assistant prof. Dr. Soheir Twfeek Ahmed

Assistant Professor of Medical Surgical Nursing, Faculty
of Nursing – Ain Shams University

Faculty of Nursing

Ain Shams University

2015

ACKNOWLEDGEMENTS

Thanks to **GOD** who lightened my path to become a humble student of a noble profession.

Words can never express my hearty thanks and indebtedness to **Prof. Dr. Magda Abd-Elaziz**, Professor of Medical Surgical nursing, Faculty of Nursing, Ain-Shams University for her comprehensive advice, continuous encouragement and faithful guidance also for her efforts and the precious time she had devoted to the perfection of this work.

With considerable appreciation, I express my deepest gratitude to **assistant prof. Dr. Soheir Twfeek Ahmed**, Assistant professor of Medical Surgical Nursing, Faculty of Nursing, Ain-Shams University, for her guardian instructions, continued support, advice, greatest valuable information and unlimited help to the fulfillment of this work.

I would like to express deep my profound gratitude and appreciation to the patients who helped me and health member to accomplish this work and finally I would express my appreciation to my family and all those who directly or indirectly helped me to accomplish this research work.

LIST OF CONTENTS

1.	Introduction	1
	Significance of the study	4
2.	Aim of the study	6
	Research hypothesis	7
3.	Review of literature	8
	Part I:	
	▪ Peripheral arterial disease	8
	▪ Anatomy and physiology of the leg	10
	▪ Pathophysiology of chronic lower limb ischemia	13
	▪ Incidence of chronic limb ischemia	15
	▪ Risk factors and causes of chronic lower limb ischemia	16
	▪ Clinical presentation of chronic lower limb ischemia	17
	▪ Clinical staging of lower extremity arterial disease (LEAD)	20
	▪ Complications of chronic limb ischemia	24
	▪ Diagnostic approach of chronic lower limb ischemia	24
	Part II:	
	▪ Compliance of patient with chronic limb ischemia	35

	▪ Therapeutic regimen for patient with chronic limb ischemia	37
	Part III:	
	▪ Management of chronic limb ischemia	38
	1-Medical management	40
	2-Nursing role	49
	Part IV:	
	▪ Patient education	58
4.	Subjects and methods	72
5.	Results	89
6.	Discussion	119
7.	Conclusions & Recommendations	144
8.	Summary	146
9.	References	154
10.	Annexes	182
11.	Arabic summary	

LIST OF TABLES

T. No	Title	Page
Related to Review of Literature		
T.1:	Clinical staging of lower extremity arterial disease	23
Related to Results		
T.1:	Socio-demographic characteristics of the study sample	91
T.2:	Medical characteristics data of the study sample	93
T.3.1:	Levels of patient's knowledge regarding chronic lower limb ischemia & health habits pre, post and follow up of program implementation	95
T.3.2:	Levels of patient's knowledge regarding to exercise & smoking cessation, pre, post and follow up of program implementation	97
T.3.3:	Levels of patient's knowledge regarding pain management, foot care & life style pre, post and follow up of program implementation	98
T.4:	Total mean scores of the patient's leg assessment pre and post implemented educational program	100
T.4.1:	Effect of implemented an educational program for patients with chronic lower limb ischemia on foot assessment regarding to pain and skin assessment through out of program phases	101

T.4.2:	Effect of implemented an educational program for patients with chronic lower limb ischemia on foot assessment through out the program phases	103
T.4.3:	Effect of implemented an educational program for patients with chronic lower limb ischemia on foot assessment regarding to sensory, autonomic and motor aspects through out program phases	104
T.4.4:	Effect of implemented an educational program for patients with chronic lower limb ischemia on foot assessment regarding to circulation and edema through out program phases	105
T.5.1:	Levels of patient practice related to foot care pre, post and follow up of program implementation regarding to daily inspection & daily hygiene	107
T.5.2:	Levels of patient practice related to foot care pre, post and follow up of program implementation regarding to care of toe nail & proper footwear	109
T.6.1:	Levels of the patient's compliance regarding to pain, nutrition, smoking cessation and exercise pre, post and follow up of program implementation	111
T.6.2:	Levels of the patient's compliance regarding lower limb care, pharmacotherapy, risk factors modification and follow up, pre, post and follow up of program implementation	113

T.7:	Correlation coefficient between Patients sociodemographic characteristics and level of patient compliance	115
T.8:	Correlation coefficient between Patient compliance and their knowledge	116
T.9:	Correlation coefficient between Patient foot care and their knowledge	117
T.10:	Correlation coefficient between foot assessment and their knowledge	118
Related to the Annexes		
T.1:	Cronbach's alpha reliability coefficient	201
T.2:	Expertise judgment regarding the general evaluation of content validity of assessing needs of patients with chronic lower limb ischemia	202

LIST OF FIGURES

Fig. No	Title	Page
Related to Review of Literature		
Fig.1:	Leg muscle	12
Fig.2:	Vasculature of the leg	12
Fig.3:	Normal artery within normal blood flow and abnormal blood flow with atherosclerotic artery	15
Fig.4:	Measurement of the ankle-brachial index (ABI), calculated by dividing the ankle systolic blood pressure by the arm systolic blood pressure.	28
Fig.5:	Management of chronic limb ischemia	39
Fig.6:	Patient education regarding chronic lower limb ischemia	58
Related to Results		
Fig.1:	Total mean scores of patient's knowledge pre, post and follow up of program implementation	94
Fig.2:	Total mean scores of patient's foot care assessment pre, post and follow up of program implementation	106
Related to the Annexes		
Fig.1:	Percentage of expertise, judgment regarding the general evaluation of content validity of assessing needs of patients with chronic lower limb ischemia	202

LIST OF APPREVIATIONS

No	App.	Meaning
1.	ABI	Ankle brachial index
2.	ACE	Angiotensin-converting enzyme
3.	ASA	Aspirin (Acetylsalicylic Acid)
4.	CLI	Chronic limb ischemia
5.	CRP	C-reactive protein
6.	CT	Computed tomography
7.	CTA	Computed tomography angiography
8.	DM	Diabetes mellitus
9.	DSA	Digital subtraction angiography
10.	DUS	Duplex ultrasound
11.	DVT	Deep venous thrombosis
12.	ESRD	End stage renal disease
13.	GFR	Glomerular filtration rate
14.	HDL	High density lipoprotein
15.	HOPE	Heart Outcomes Prevention Evaluation
16.	LDL	Low density lipoprotein
17.	LEA	Lower-extremity amputation
18.	LEAD	Lower extremities arterial disease
19.	MDCT	Multi detector computed tomography
20.	MHz	Megahertz
21.	MRA	Magnetic resonance angiography
22.	PAD	Peripheral arterial disease
23.	TCPO ₂	Transcutaneous tissue oxygen concentration
24.	2D	Two dimensional
25.	USA	United State of America
26.	WHO	World Health Organization
