Prof. and Head of Genetic department

Faculty of Agriculture, Kafr El-Sheikh

Tanta University

Prof. Dr. A.A. Galal

Prof. of Agronomy

Maize Section

Agriculture Research Center

ACKNOWLEDGMENT

First of all, thank for "Allah"

I would like to express my deepest gratitude and sincere appreciation to Prof. Dr. A.bdel-Hamid A. Ali Professor and Head of Genetics Department, Faculty of Agriculture Tanta University for t suggesting the problem, valuable guidance and supervision through the course of the investigation and constructive criticism during the preparation of the manuscript.

Thanks and sin appreciation are due to Prof. Dr. Salem A. Abd Alla Prof. Dr. of Genetics, Faculty of Agric., Tanta Univ. for his supervision, effective help and advises.

I wish to express my deepest gratitude and sincere appreciation to Prof. Dr. A.A. Galal Professor of Agronomy, Maize Research Section, Sakha Agric. Center for Supervision effective help and advice in analysis of data and constructive criticism during the preparation of the manuscript.

Thanks are also due to all members of Genetics Department, Fac. of Agric., Tanta Univ. and Maize Research Section at Sakha for providing the materials and their sincere help.

At the end and at the beginning gratefulness and thanks are due to my mother, father, brothers, sisters and my sincere gratitude to my wife Ola Galal and my daughter Alaa for there patience and understanding.

CONTENTS

INTRODUCTION	1
REVIEW OF LITERATURE	3
1. Tissue culture experiments.....	3
2. Yield and physiological characters	13
MATERIALS AND METHODS	19
1. Tissue culture experiments	19
a. Plant materials and experimental protocol	19
b. Media and incubation.....	22
c. Plant regeneration	22
1.1. Primary <i>in vitro</i> selection of inbred lines for responsibility and callus ability	24
1.2. <i>In vitro</i> selection of inbred lines under salt stress conditions	24
1.3. Study the complete diallel mating under salinity levels <i>in vitro</i>	25
2. Estimation of callus growth rate traits, yield and physiological character <i>in vivo</i> and its phenotypic correlation.....	26
2.1. Callus growth rate experiments	26
2.2. Evaluation of yield and physiological characters	26
3. Statistical analysis	27
3.1. Analysis of variance	27
3.2. Diallel crosses	28
3.3. Heterosis.....	32
3.4. Potence ratio.....	32
RESULTS AND DICUSSION	33
1. The tissue culture experiments.....	33
1.1. Primary <i>in vitro</i> selection of inbred lines for PRE and CFW traits	33
1.1.1. Mean performance	33
1.1.2. Analysis of genetic variation	35
1.2. <i>In vitro</i> selection of inbreds under salt stress conditions	35
1.2.1. Mean performance	35
1.2.2. Analysis of genetic variation	42
1.3. Evaluation of culturability traits under salt stress conditions.....	42
1.3.1. Mean performance	42

1.3.2. Analysis of genetic variation	49
1.3.3. Heterosis percentage	51
1.3.4. Combining ability and reciprocal effects.....	53
1.3.5. Type of gene action.....	61
2. Evaluation of callus growth rate, other <i>in vivo</i> characters and their phenotypic correlation	62
2.1. Callus growth rate experiments	62
2.1.1..Mean performance	62
2.1.2. Analysis of genetic variation	68
2.1.3. Heterosis percentage	70
2.1.4. Combining ability and reciprocal effects.....	72
2.1.5.Type of gene action.....	77
2.2. Evaluation of yield per plant and agronomic characters.....	78
2.2.1. Mean performance	78
2.2.2. Analysis of genetic variation	80
2.2.3. Heterosis percentage	80
2.2.4. Combining ability and reciprocal effects.....	83
2.2.5: Type of gene action.....	87
2.3. Phenotypic correlation between callus growth traits <i>in</i> <i>vitro</i> and other main character <i>in vivo</i>	88
SUMMARY.....	90
