

Applications of Bacteriophage on Pathogenic Salmonella using Radiation Techniques

A Thesis Submitted in Partial Fulfillment of the Requirements for the Degree of Master in Science (M.Sc.) in Microbiology

By

Mohammed Hassan Abdel-Aal Hassan

B.Sc. of Microbiology and Chemistry,
Faculty of Science, Assiut University;(2007)
Atomic Energy Authority
National Center for Radiation Research and Technology
(NCCRT)

Supervised by

Prof. Nagwa Ahmed Abdellah

Professor of Microbiology, Microbiology Department - Faculty of Science, Ain Shams.

Prof. Hala Ahmed Hussein

Professor of Microbiology, National Center for Radiation Research and Technology (NCRRT), Atomic Energy Authority.

Dr. Amel Saeid Mohamad Abu- Senna

Assistant professor of Virology, Faculty of Science, AL-Azhar University (Girls Branch)

Microbiology Department Faculty of Science Ain Shams University 2017

<u>ACKNOWLEDGMENT</u>

At first I would say "My Pray, Devoutness, Existence and Death are for Allah, The God of all creatures"

Praise is to **Allah**, who had guided us to this: never could we have found guidance, had it not been for the guidance of **Allah**. Thanks to Allah for all gifts given to me.

I am especially indebted to **Prof. Or. Nagwa Ahmed Abdellah** Professor of Microbiology - Microbiology Department - Faculty of Science - Ain Shams University, for her sincere guidance, direct supervision, continuous support during the stages of this work and his valuable revision.

My deep gratitude and sincere thanks to **Prof. Dr. Mohie El-Din Zohier El-Fouly** Professor of Microbiology, National Center for Radiation Research and Technology (NCRRT), Atomic Energy Authority, for supervising the present work, his effort in constructive criticism and valuable critical reading and revising the manuscript.

Many thanks to **Prof. Dr. Hala Ahmed Hessein** Professor of Microbiology, National Center for Radiation Research and Technology (NCRRT), Atomic Energy Authority, for her valuable guidance, direct supervision, continuous support during the stages of this work and valuable revision.

Sincere especial thanks are to **Prof. Dr. Hesham Mahmoud Swailam** Professor of Microbiology, National Center for Radiation Research and Technology (NCRRI), Atomic Energy Authority, for his meticulous, sincere, patient guidance throughout the steps of this work, valuable critical reading and revision of the manuscript at the thesis as well as published paper.

I would like to express my kindest regards and gratefulness to my supervisor **Dr. Amel Saeid Mohamad Abu-Senna** Lecturer of Virology, Faculty of Science, AL-Azhar University (Girls Branch) for supervising the present work, great encouragement, effort throughout the Master, valuable scientific ideas and advices. Also, for inspiring guidance, valuable time, helpful notices and for progressing in work with keen interest and encouragement.

My thanks are extending to the all members at National Center for Radiation Research and Technology, Department of Microbiology and Gamma Radiation Unit.

Finally, I want to express my deepest gratitude to all my family (especially my great parents) for their patience, encouragement, everlasting love, care, support and endurance which made the completion of this thesis a reality.

At the end, I wish this thesis would be assistance for scientific researchers in the field.

Mohammed Hassan Abdeb-Aal

5. Results	58
5.1. Isolation and identification of <i>Salmonella</i>	58
typhimurium	
5.1.1. Sources of Isolates	58
5.2. Determination of toxicity of 65 different	63
Salmonella isolates	
5.3. Factors affecting Salmonella toxicity	65
5.3.1. Incubation temperatures	66
5.3.2. Influence of pH growth medium	68
5.3.3. Influence of different exposure time of	69
UV(min.)	
5.3.4. Influence of different Gamma irradiation	71
doses	' -
5.4. Isolation of Bacteriophages	72
5.5. Host specificity of the isolated phages	75
5.6. Phages longevity in vitro	77
5.7. Factors affecting the lytic activity of the isolated	78
bacteriophages	
5.7.1. Deactivation end point (thermal end point)	78
5.7.2. Effect of pH on phage lytic activity	79
5.7.3. Lytic activity of non-irradiated phages to	80
Gamma irradiated Salmonella	
5.7.4. Lytic activity of Gamma irradiated phages to	81
non-irradiated Salmonella	
5.7.5. Lytic activity of UV irradiated phages to non-	82
irradiated Salmonella	
5.8. Morphological characters of the isolated phages	84
5.9. Controlling Salmonella in chicken cuts via	89
application of mixture of isolated bacteriophages	
(phage cocktail)	
5.9.1. Bacteriophage application on chicken pieces	89
originally free from Salmonella	
5.9.1.1. Soaking treatment	89
5.9.1.2. Spraying treatment	93
5.9.2. Bacteriophage application on chicken pieces	97
originally contaminated with Salmonella	
5.9.2.1. Soaking treatment	97

5.9.2.2. Spraying treatment	102
6. Discussion	110
7. English Summary	117

Arabic Summary	

LIST OF TABLES

No.	Title	Page
1	Types of collected samples and number of	59
	isolates which selected from brilliant green and	
	S-S media according to (WHO) (2003)	
2	Identification of the selected isolates	61-62
3	Number of Salmonella isolates distributed in the	63
	food samples	
4	Cytotoxicity of different endotoxins separated	64-65
	from Salmonella isolates on Ehrlich carcinoma	
	viability according to Da Mota et al., (2012)	
5	Influence of different incubation temperatures on	67
	Salmonella typhimurium ATCC 14028 viability	
	and toxicity percentages	
6	Influence of different pH growth media on	68
	Salmonella typhimurium ATCC 14028 viability	
	and toxicity percentages incubated at 37 °C	
7	Influence of different exposure time of UV on	70
	Salmonella typhimurium ATCC 14028 viability	
	and toxicity percentages	
8	Influence of different Gamma irradiation doses	71
	Salmonella typhimurium ATCC 14028 viability	
	and toxicity percentages	
9	plaque morphology of the isolated Salmonella-	73
	specific bacteriophages	
10	Determining the Host specificity of the isolated	76
	phages according to Othman et al., (2015)	
11	Determination of the stability of Salmonella	77-78
	bacteriophage particles, at different temperature	
	degrees for 120 days by spot test
