Ain Shams University
Department of Anesthesiology,
Intensive Care and Pain Management

Anesthesia for Electrophysiological Studies and Catheter Ablations

Essay

Submitted in Partial Fulfillment of the Master Degree
in Anesthesiology

Presented by

Diaa El Din Badr Metwally
(MB, BCh)

Faculty of Medicine - Ain Shams University

Under Supervision of

Prof. Dr. Samia Ibrahim Sharaf

Professor of anesthesiology, ICU and pain management
Faculty of Medicine – Ain Shams University

Prof. Dr. Dalia Abd El Hameed Nasr

Professor of anesthesiology, ICU and pain management
Faculty of Medicine - Ain Shams University

Dr. Mohamed Saleh Ahmed

Lecturer of anesthesiology, ICU and pain management
Faculty of Medicine - Ain Shams University

Faculty of Medicine
Ain Shams University

2016

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

وَقُلْ رَبِّ
زِدْنِي عِلْمًا

سورة طه
الاية (114)

Acknowledgement

To Allah goes My deepest gratitude and thanks for achieving any work in my life.

I would like to express my deepest gratitude to **Prof. Dr. Samia Ibrahim Sharaf**, Professor of Anesthesiology, Intensive Care & Pain Management, Faculty of Medicine – Ain Shams University for dedicating so much of her precious time and effort to help me complete this work. I really appreciate so much her constant guidance and assistance to me.

I would like to express my deepest gratitude to **Prof. Dr. Dalia Abd El Hameed Nasr**, Professor of Anesthesiology, Intensive Care & Pain Management, Faculty of Medicine - Ain Shams University for dedicating so much of her precious time and effort to help me complete this work. I really appreciate so much her constant guidance and assistance to me.

Indeed, words do fail me when I come to express my unlimited appreciation to **Dr. Mohamed Saleh Ahmed**, Lecturer of Anesthesiology, Intensive Care & Pain Management, Faculty of Medicine - Ain Shams University who was always there to help me, to encourage me and very kindly offer me his valuable remarks in every step of this work.

Finally, I am most grateful to **all members of my family** for giving me great support.

Diaa El Din Badr Metwally

List of Contents

Subject	Page No.
List of Figures	I
List of Tables	III
List of Abbreviations	IV
Introduction	1
Aim of the Essay	3
Chapter (1) Pathophysiology of cardiac arrhythmias	4
Chapter (2) Electrophysiology techniques	36
Chapter (3) Anesthetic management for electrophysiology techniques	58
Summary	97
References	99
Arabic summary	120

List of Figures

Figure No.	Title	Page No.
Figure (1)	The cardiac action potential.	5
Figure (2)	Refractory periods	7
Figure (3)	Mechanisms of enhanced automaticity	9
Figure (4)	Overdrive suppression and post suppression warm-up period	11
Figure (5)	Representation of triggered activity	12
Figure (6)	Anatomic reentry	19
Figure (7)	Schematic representation of an excitable gap	20
Figure (8)	Entrainment	23
Figure (9)	Mechanism of bradyarrhythmia	27
Figure (10)	Atrial flutter	28
Figure (11)	Atrial fibrillation	29
Figure (12)	Induction of typical AVNRT by atrial ectopy	31
Figure (13)	Initiation of atrioventricular nodal tachycardia with an atrium premature complex	31
Figure (14)	Monomorphic ventricular tachycardias	33
Figure (15)	Polymorphic ventricular tachycardias	35
Figure (16)	A Fluoroscopic image of a basic catheter set-up during a diagnostic electrophysiologic procedure in a patient with cardiomegaly	40

List of Figures (cont.)

Figure No.	Title	Page No.
Figure (17)	Transseptal puncture using only fluoroscopy	41
Figure (18)	A fluoroscopic image during pulmonary vein isolation for atrial fibrillation ablation.	41
Figure (19)	pulmonary vein isolation of atrial fibrillation. with CARTO system	44
Figure (20)	three-dimensional transesophageal echocardiographic image for catheter tip visualization	47
Figure (21)	Schematic of common lesion sets used in atrial fibrillation ablation	55
Figure (22)	Room setup in electrophysiology laboratory	63

List of Tables

Table No.	Title	Page No.
Table (1)	Mechanisms of Cardiac Arrhythmias	8
Table (2)	Agents and manipulations that may lead to early after depolarizations.	14
Table (3)	Types of Reentry	18
Table (4)	Maneuvers for distinguishing between the different arrhythmia mechanisms.	24
Table (5)	Common Anesthetic Medications and Their Electrophysiologic Effects	82
Table (6)	Common Anesthetic Medications and Antagonists	84
Table (7)	dosing regimens for heparin in left heart procedures	87

List of Abbreviations

Abbr.	Title
ACT	Activated Clotting Time
AF	Atrial Fibrillation
ALARA	As Low As Reasonably Achieved
AP	Action Potential
APC	Atrium Premature Complex
ASA	American Society of Anesthesiologists
AV	Atrioventricular
AVNRT	Atrioventricular Nodal Reentry Tachycardia
BPAP	Bilevel Positive Airway Pressure
CPAP	Continuous Positive Airway Pressure
CS	Coronary Sinus
DAD	Delayed After Depolarizations
DC	Direct Current
EAD	Early After Depolarization
EAM	Electroanatomic Mapping
ECG	Electrocardiogram
EP	Electrophysiology
EPL	Electrophysiology Laboratory
ETCO2	End Tidal Carbon Dioxide
HFJV	High Frequency Jet Ventilation
ICD	Implantable Cardioverter Defibrillator
ICE	Intracardiac Echocardiography
INR	International Normalized Ratio
LAA	Left Atrial Appendage
LMA	Laryngeal Mask Airway
LOM	Ligament of Marshall
LSPV	Left Superior Pulmonary Vein

List of Abbreviations (cont.)

Abbr.	Title
MAC	Monitored Anesthesia Care
MDP	Membrane Diastolic Potential
MV	Mitral Valve
NMDA	N-methyl-Daspartate
PES	Programmed Electric Stimulation
RA	Right Atrium
RF	Radiofrequency
RT	Reciprocating Tachycardia
RUPV	Right Upper Pulmonary Vein
RV	Right Ventricle
SVT	Supraventricular Tachycardia
TA	Triggered Activity
TEE	Transesophageal Echocardiography
TH	Threshold
VF	Ventricular Fibrillation
VT	Ventricular Tachycardia
WPW	Wolff Parkinson White Syndrome

Introduction

Introduction

Providing anesthesia in nonoperating room locations is becoming increasingly common. The field of electrophysiology (EP) and its patient population are growing, resulting in a greater need for anesthesiologists in the electrophysiology laboratory (**Kwak, 2012**).

The procedures are complex and of long duration with patients who have multiple comorbidities. The electrophysiology laboratory (EPL) is a unique place in that arrhythmias are sought and sometimes even provoked so that they need to be eliminated (**Roger et al., 2012**).

Technologies for the treatment of arrhythmias are rapidly developing and these techniques are associated with unique complications. Also some patients are unable to lie flat, or tolerate the procedure, children, adolescents, and anxious adults, congenital heart disease, and anticipated long and protracted procedures require monitored anesthesia care (MAC) or a general anesthesia (**Calkins et al., 2012**).

It is important for the anesthesiologists to be familiar with the key aspects of EP procedures, and recording techniques and parameters in order to understand the impact of anesthetics or anesthesia techniques (**Mahajan., 2012**).

The following essay will highlight the techniques used by the cardiologists to map arrhythmias and discuss the different procedures involved in ablation. It will consider the anesthetic implications of these procedures and discuss the challenges of delivering safe anesthesia in electrophysiology laboratory.

Aim of the Eassy

Aim of the essay

The aim of this essay is to focus the light on the anesthetic management of patients with arrhythmias of variable pathophysiology and other comorbidities undergoing electrophysiological studies and catheter ablations in electrophysiology laboratory.

Review of Literature
