**Value of ultrasonographic study of portal,
splenic and superior mesenteric veins as a
non invasive method for diagnosis of portal
hypertension due to liver cirrhosis**

Thesis

Submitted for Partial Fulfillment of Master
Degree in Internal Medicine

By:

Sayed Abd Elrazek Abd Elrahman Dahab
M.B., B.CH

Supervised By:

Prof.Dr.Mohsen Mostafa Maher

*Professor of Internal Medicine and Gastroenterology
Faculty of medicine – Ain Shams University*

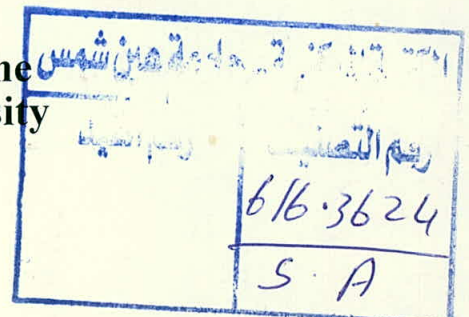

Prof.Dr.Emad Ahmad Awad

*Professor of internal medicine and gastroenterology
Faculty of medicine – Ain Shams University*

Dr.Wessam Ahmed Ebrahim

*Lecturer of internal medicine and gastroenterology
Faculty of medicine – Ain Shams University*

**Faculty of Medicine
Ain Shams University
Cairo, 2011**

Acknowledgment

First and foremost, I feel always indebted to Allah, the most beneficent and merciful.

I would like to express my deepest sincere gratitude to **Dr Mohsen Mostafa Maher**; Professor of internal Medicine, Faculty of Medicine, Aim Shams University, for his constant encouragement, guidance and efficient supervision. It is an honor to work under his guidance and supervision

I'm also grateful to **Dr. Emad Ahmad Awad**, Professor of internal Medicine, Faculty of Medicine, Aim Shams University, for his marvelous support and valuable directions.

I'm deeply indebted to **Dr. Wessam Ahmed Ebrahim**, Lecturer of internal Medicine, Faculty of Medicine, Aim Shams University, for her continuous support, cooperation and precise supervision.

Last but not least, I want to thank all my family, colleagues, friends and my patients without their help, this work could not have been done.

Contents

	Page
* Introduction and Aim of the Work	1
* Review of Literature:	
○ Anatomical review	3
○ Liver cirrhosis	9
○ Portal Hypertension	29
○ Ultrasound	66
* Patients and Methods	80
* Results	91
* Discussion	134
* Summary	151
* Conclusion and Recommendations	154
* References	156
* Arabic Summary	___

List of Figures

<i>Figure No.</i>	<i>Details</i>	<i>Page No.</i>
1	Flow of blood and bile in the liver	4
2	Formation of the portal vein behind the neck of the pancreas	6
3	A collateral circulation in cases of obstruction in the liver or portal vein	8
4	A-Normal hepatic tissue and structure (gross and microscopic), B-Cirrhotic liver (gross and microscopic)	9
5	Transjugular intrahepatic portosystemic shunt	65
6	Normal liver with portal vein, inferior vena cava and right branch of the portal vein.....	71
7	Liver cirrhosis with ascites	76
8	Alcohol-induced cirrhosis with recanalized umbilical vein	78
9	Cruveilhier-von Baumgarten syndrome in alcohol induced cirrhosis	78
10	Child-Pugh distribution in GROUP I	92
11	Description of upper GIT endoscopic findings in GROUP I	93
12	Hepatitis C antibody and hepatitis B surface antigen distribution in group1	95

13	Percentage of different signs and symptoms in group1	98
14	Comparison between the two studied groups according to serum albumin	100
15	Comparison between the two studied groups according total serum bilirubin	100
16	Comparison between the two studied groups according to hemoglobin level	102
17	Comparison between the two studied groups according platelet count	102
18	Comparison between two groups according to diameters of veins during inspiration and expiration	104
19	Description of variability in diameters of the studied veins during inspiration and expiration in group I	106
20	Description of variability in diameters of the studied veins during inspiration and expiration among group1e	108
21	Correlation coefficient between splenic size and superior mesnetric vein diameter, splenic vein in expiration	114
22	Superior mesenteric vein ROC CURVE	115
23	Splenic vein ROC CURVE	117
24	Portal vein ROC CURVE	119

25	Absence of caliber variation during respiratory movement in prediction of esophageal varices ROC CURVE	121
26	Serum albumin in prediction of esophageal varices ROC CURVE	123
27	Platelet count in prediction of esophageal varices ROC CURVE	125
28	Splenomegaly in prediction of esophageal varices ROC CURVE	127
29	Normal portal vein, right parasagittal scan	129
30	Portal hypertension due to hepatic cirrhosis.oblique scan	129
31	Portal hypertension due to hepatic cirrhosis. Transverse scan	130
32	Caliber variation in a normal splenic vein (sp) during breathing	130
33	Caliber variation in a normal superior mesenteric vein (sp) during breathing	131
34	A and B portal hypertension due to hepatic cirrhosis	31
35	Normal oesophagus	132
36	EV grade (I)	132
37	EV grade (II)	132
38	EV grade (III)	133
39	EV grade (IV)	133

36	E/V grade (IV)	1.43
37	E/V grade (III)	1.33
38	E/V grade (II)	1.22
39	E/V grade (I)	1.12
40	Normal oesophagus	1.02
41	A and B portal hypertension due to portal cirrhosis	0.1
42	Caliber variation in a normal subject measured with the method using a catheter	1.31
43	Caliber variation in a normal subject with ECG during breathing	1.30
44	Caliber variation in a normal subject with ECG in the supine position	1.30
45	Portal hypertension due to hepatic cirrhosis	1.20
46	Portal hypertension due to hepatic cirrhosis with a normal ECG	1.20
47	Normal portal venous pressure with ECG	1.20
48	various ROC CURVE	1.17
49	Splanchnic artery resistance in hepatic cirrhosis	1.17
50	various ROC CURVE	1.12
51	Platelet count in hepatic cirrhosis	1.12
52	various ROC CURVE	1.11
53	Serum albumin in hepatic cirrhosis	1.11
54	various ROC CURVE	1.11
55	movement in position of catheter in hepatic cirrhosis	1.11
56	absence of caliber variation during breathing	1.11
