Strengthening of RC Continuous Slabs using Externally Prestressed CFRP Laminates

BY

Mohamed Hamdi Mohamed El-Sefy
B.Sc. 2012 STRUCTURAL DEPARTMENT
CIVIL ENGINEERING DEPARTMENT
AIN SHAMS UNIVERSITY

A Thesis

SUBMITTED IN PARTIAL FULFILLMENT FOR THE REQUIREMENTS OF THE DEGREE OF MASTER OF SCIENCE IN CIVIL ENGINEERING (STRUCTURAL)

SUPERVISED BY

Professor Dr. Amr Ali Abdelrahman
Professor of Concrete Structures,
Structural Engineering Department,
Ain Shams University

Dr. Tamer H. K. Elafandy
Associate Professor,
Concrete Structure Institute,
Housing and Building National
Research Center

Dr. Mahmoud El katteb
Assistant Professor,
Structural Engineering Department,
Ain Shams University

Housing and Building National Research Center.

Date 15 / August / 2016

STATEMENT

This thesis is submitted to Ain Shams University, Cairo, Egypt, on August 2016 for the degree of Master of Science in Civil Engineering (Structural).

The experimental work included in this thesis was carried out by the author at reinforced concrete lab of the Housing and Building National Research center.

No part of this thesis has been submitted for a degree or qualification at any other University or Institute.

Date : / August / 2016

Signature :

Name : Mohamed Hamdi Mohamed El-Sefy

DEDICATION

To My Father and Mother

To My Brother and Sisters

ACKNOWLEDGMENTS

First of all, I thank GOD who guided and helped me to finish this work in the proper shape.

I would like to express my deepest appreciation to Prof., Dr. Amr Ali Abdelrahman, Professor of Concrete Structures, Faculty of Engineering, Ain Shams University, for his guidance and valuable suggestions. His great effort during the experimental phase, the analysis of results, as well as the organization of the research and thesis was immeasurable.

I would like express extremely grateful to Dr. Tamer Hassan Elafandy. His experience, technical assistance, insight and invaluable support have played a central role in developing this thesis. It is a great pleasure to work under his supervision.

I wish also to thank Dr. Mahmoud El kateb, for his highly appreciated effort and support in completing this work.

My special thanks go to my friends, Eng. Shady Nabil, Eng. Eslam Mousa and Eng. Mohamed AbuGazia, for their continuous encouragement and assistance during the experimental phase.

The strengthening works were applied by Contra Company, Eng.Khaled Abdelaal. The author gratefully acknowledge this support.

Special thanks go to Sika Company, Eng. Hanaa Abdelhamid, for their support to the research by supplying the research with strengthening materials.

Finally, I would like to thank my family for their continuous encouragement, overwhelming support, fruitful care and patience, especially during the hard times.

LIST OF EQUATIONS XI
LIST OF SYMBOLS..XII
ABSTRACT...XIII

1. INTRODUCTION..1
1.1 General 1
1.2 Composition OF Advanced Composite Materials 3
1.2.1 Mechanical Properties of FRP 3
1.2.2 Advantages and Disadvantages of FRP............................4
1.3 Objectives of the Research..5
1.4 Scope and Contents 5

2. LITERATURE REVIEW..8
2.1 Introduction...8
2.2 Flexural Strengthening using Non-prestressed FRP 9
2.3 Prestressed FRP Laminate Strengthening Systems.............12
2.3.1 Cambered Beam System 12
2.3.2 Tensioning Against External Reaction Frame 15
2.3.3 Tensioning Against the Strengthened Member Itself......17
2.4 Flexural Strengthening using Prestressed FRP...................22
2.5 Moment redistribution...31
2.6 Ductility 33
2.7 Field Applications...35

3. EXPERIMENTAL WORK 37
3.1 General 37
3.2 Test Specimens 37
3.3 Slab Fabrication 40
3.4 Application Steps of the Strengthening System.................44
3.4.1 Surface Preparation 44
3.4.2 Procedure of Prestressing.......................................44
3.5 CFRP Strengthening Schemes.......................................50
3.6 CFRP Prestressing Operation 57
3.7 Material Properties..58
3.7.1 Concrete 58
3.7.2 Reinforcement 61
3.7.3 FRP Composites, Epoxy Paste and Resin 62
3.8 Testing Procedure 63
3.9 Instrumentation 65
3.10 Data Logger 68

4. EXPERIMENTAL RESULTS AND DISCUSSION...69
4.1 Introduction..69
4.2 Flexural Behavior of Test Specimens..................................70
4.2.1 Behavior of Specimen (SP1-Control) 70
4.2.2 Behavior of Specimen (B-CFRP-P1)...............................74
4.2.3 Behavior of Specimen (B-CFRP-P2)...............................81
4.2.4 Behavior of Specimen (B-CFRP-P3)...............................89
4.2.5 Behavior of Specimen (B-CFRP-P4)...............................94
4.3 Discussion of the Results 100
4.3.1 Behavior of the Slabs during Prestressing........................100
4.3.2 Crack Pattern and Failure Mode.......................................103

4.3.3 Vertical Deflection 110
4.3.4 Tensile Steel Strains 113
4.3.5 Compressive Steel Strains 115
4.3.6 CFRP Strains 116
4.3.7 Support Reactions 119
4.3.8 Load Moment Relationships 122
4.3.9 Maximum Load Enhancement Ratio 124
4.3.10 Moment redistribution 125
4.3.11 Ductility of Tested Slabs 125

5. ANALYTICAL STUDY 128
5.1 Introduction 128
5.2 Material Modeling 128
5.2.1 Concrete 128
5.2.2 Steel 131
5.2.3 CFRP Laminates 131
5.3 Flexural Capacity Prediction 131
5.4 Comparison between Predicted and Experimental Results 134

6. SUMMARY AND CONCLUSIONS 136
6.1 Summary 136
6.2 Conclusions 136
6.3 Recommendations 140

4.2 Deflection response of the control specimen..........................72
4.3 Contact between the distributor beam and top surface of the control specimen 72
4.4 Load versus vertical deflection relationship (LVDT06) for control specimen (SP1-Control).......................................73
4.5 Failure of control specimen (SP1-Control).............................73
4.6 Tension crack induced during prestressing of the top CFRP laminate...77
4.7 Deflection response of specimen (B-CFRP-P1) 77
4.8 Load versus deflection relationship (LVDTs 01 and 06) for specimen (B-CFRP-P1)..78
4.9 Load verses top CFRP strains for specimen (B-CFRP-P1)..78
4.10 Load verses top and bottom CFRP strains at the critical positive and negative sections of specimen (B-CFRP-P1).....79
4.11 Bottom CFRP laminate over positive moment region of span (AB)...79
4.12 Failure of top CFRP laminate of specimen (B-CFRP-P1)......80
4.13 Fracture of two steel reinforcement bars 80
4.14 Failure of specimen (B-CFRP-P1)..81
4.15 Load versus mid-span deflection relationship (LVDTs 02 and 05) for specimen (B-CFRP-P2) 84
4.16 Deflection response of specimen (B-CFRP-P2).....................84
4.17 Load verses top CFRP strains of specimen (B-CFRP-P2) 85
4.18 Load verses bottom CFRP strains of specimen (B-CFRP-P2) 85
4.19 Failure of the top CFRP laminate of specimen (B-CFRP-P2) 86
4.20 Delamination of the bottom CFRP laminate 86
4.21 Top and bottom CFRP laminates of slab (B-CFRP-P2).........87
4.22 Failure of specimen (B-CFRP-P2)..88

4.23 Position of tested specimen (B-CFRP-P2) after removal of the applied load 88
4.24 Load verses deflection relationship (LVDTs 01 and 06) relationship for specimen (B-CFRP-P3)....91
4.25 Failure of top CFRP laminate of specimen (B-CFRP-P3)......91
4.26 Deflection response of specimen (B-CFRP-P3)....92
4.27 Load verses top CFRP strains of specimen (B-CFRP-P3) 92
4.28 Plastic hinges 93
4.29 Failure of specimen (B-CFRP-P3)....93
4.30 Load verses deflection relationship (LVDTs 01 and 06) for specimen (B-CFRP-P4)....96
4.31 Load verses bottom CFRP laminate strains of specimen (B-CFRP-P4) 96
4.32 Position of first and second delamination of bottom CFRP laminate....97
4.33 Cracks pattern at live end anchor of specimen (B-CFRP-P4) 98
4.34 Deflection response of specimen (B-CFRP-P3)....98
4.35 Failure of specimen (B-CFRP-P4)....99
4.36 Stressing of span AB of specimen (B-CFRP-P1)....101
4.37 Stressing of span BC of specimen (B-CFRP-P1) 102
4.38 Stressing the two spans of specimen (B-CFRP-P4) 102
4.39 Top CFRP laminate strain versus strain (S05) response of the top reinforcement bars over the intermediate support section for all strengthened specimens 103
4.40 Crack pattern of all specimens....106
4.41 Crack pattern at the negative moment region for all specimens....107
4.42 Number of cracks induced in span (AB) versus the incremental increase in the applied load for all tested specimens....108
4.43 Number of cracks induced in the negative moment region versus the incremental increase in the applied load for all tested specimens....109

4.44 Number of cracks induced in span (BC) versus the incremental increase in the applied load for all tested specimens..109
4.45 The applied load versus deflection relationship (LVDT01 or LVDT06) for all tested specimens 111
4.46 The applied load versus mid-span deflection relationship (LVDT02) for all tested specimens 112
4.47 The applied load versus mid-span deflection relationship (LVDT05) for all tested specimens 112
4.48 The applied load versus the tensile steel strain curves of all tested specimens 114
4.49 The applied load versus the tensile steel strain (S03) curves of all tested specimens..114
4.50 The applied load versus steel strain curves (S04) for all tested specimens 116
4.51 The applied load versus top CFRP laminates tensile strains (B-S01) for all tested specimens 117
4.52 The applied load versus top CFRP laminates tensile strains (B-S02) at 500mm from the intermediate support section toward the dead end anchor for all tested specimens..118
4.53 The applied load versus top CFRP laminates tensile strains (B-S03) at 500mm from the intermediate support section toward the live end anchor for all tested specimens..118
4.54 The applied load versus bottom CFRP laminates tensile strains (AB-S01) or (BC-S01) related to the failed span for all strengthened specimens..119
4.55 The applied load versus the intermediate support reaction for all tested specimens...121
4.56 The applied load versus the end support reaction for all tested specimens 121
4.57 The applied load versus the positive bending moment response for all tested specimens..123
4.58 The applied load versus the negative bending moment response for all tested specimens..123

5.1 Stress-strain curve of the concrete in compression.................130
5.2 Strain compatibility of cross section.......................................130
5.2 A comparison between the analytical and the experimental results for all tested specimen...........................135
