

Comparative Study of Ethmoid Bone Osteitis and Tissue Eosinophilia in different Types of Chronic Rhinosinusitis

Thesis

*Submitted for the partial fulfillment of M.D. Degree in
Otorhinolaryngology*

Presented by

Mohamed Hassan AbdAllah

M SC. of Otorhinolaryngology
Faculty of Medicine- Ain Shams University

Supervised by

Prof. Dr. Osama Mahmoud Ibrahim

*Professor of Otorhinolaryngology
Faculty of Medicine- Ain Shams University*

Prof. Dr. Yasser Mohamed Fawzy El Beltagy

*Professor of Otorhinolaryngology
Faculty of Medicine- Ain Shams University*

Prof. Dr. Naglaa Samir Ahmed

*Professor of Pathology
Faculty of Medicine- Ain Shams University*

Dr. Mohamed Shehata Taha

*Consultant of Otorhinolaryngology
Ain Shams University Hospitals*

Dr. Amr Nabil Rabie

*Assistant Professor of Otorhinolaryngology
Faculty of Medicine- Ain Shams University*

**Faculty of Medicine
Ain Shams University**

2016

﴿وَقُلْ رَبِّ زِدْنِي عِلْمًا﴾

سورة طه الآية رقم ١١٤

Acknowledgement

First and foremost I feel always indebted to Allah, the Most Beneficent and Merciful.

*I would first like to express my unlimited gratitude and thankfulness to my **Prof. Dr. Osama Mahmoud**, Professor of Otorhinolaryngology, faculty of medicine, Ain Shams University, for his acceptance to supervise my work and for his continuous support, his valuable advices and encouragement, without his encourage and help I would not have been able to finish this work,*

*Many thanks to **Prof. Dr. Yasser El Beltagy**, Professor of Otorhinolaryngology, faculty of medicine, Ain Shams University, who showed me the way and the first steps for going on into this work, who helped me much and for his continuous guidance.*

*Many thanks to **Prof. Dr. Naglaa Samir**, Professor of Pathology, faculty of medicine, Ain Shams University, who showed me the way and the first steps for going on into this work, who helped me much and for her continuous guidance.*

*Many thanks to **Prof. Dr. Mohamed Shehata**, Consultant of otorhinolaryngology, faculty of medicine, Ain Shams University, who showed me the way and the first steps for going on into this work, who helped me much and for his continuous guidance.*

*Many thanks to **Prof. Dr. Amr Rabie**, Assistant Professor of otolrhinoaryngology, faculty of medicine, Ain Shams University, who showed me the way and the first steps for going on into this work, who helped me much and for his continuous guidance.*

Many thanks to All my Professors and Colleagues who helped me so much to collect the data of this study.

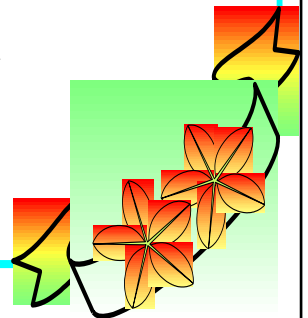

Mohamed Hassan AbdAllah

Dedication

- + To The Soul Of my father
- + To my mother and family
- + To my wonderful wife for her support and encouragement
- + To my lovely Kids Lama & Adam

I dedicate this work

Mohamed Hassan AbdAllah

Arabic Summary	--

List of Abbreviations

AAO-HNS	American Academy of Otolaryngology-Head and Neck Surgery
AFS	Allergic fungal sinusitis
ARS	Acute rhinosinusitis
BBS	Bacterial biofilms
BMP	Bone morphogenetic protein
CRS	Chronic rhinosinusitis
CRSsNP	Chronic rhinosinusitis without nasal polyp
CRSwNP	Chronic rhinosinusitis with nasal polyp
DC	Dendritic cell
DNS	Deviated nasal septum
ECRS	Eosinophilic chronic rhinosinusitis
EPOS	European Position Paper on Rhinosinusitis
FESS	Functional Endoscopic Sinus Surgery
HPF	High power field
IL	Interleukin
LM	Light Microscope
LMS	Lund-Mackay score
LPS	Lipopolysaccharide
MMPs	Matrix metalloproteinases
NPs	Nasal polyps

List of Abbreviations (Cont.)

OMC	Osteomeatal complex
OPG	Osteoprotegerin
PGE	Prostaglandin-E
PNS	Paranasal sinus
PTH	Parathyroid hormone
Ses	staphylococcal exotoxins
SNOT	Sino-Nasal Outcome Test
SPECT	Single photon emission computed tomography
TGF	Transforming growth factor
Th	T helper cells
TIMPs	Tissue inhibitors of metalloproteinase
TNF	Tumor necrosis factor
TSLP	Thymic stromal lymphopoietin

List of tables

<i>Table</i>	<i>Title</i>	<i>Page</i>
1	CT grading of osteitis	24
2	CT grading of osteitis	24
3	Global Osteitis Score	25
4	SNOT Score	49
5	Lund-Mackay CT Score	51
6	Demographic data in the four study groups	60
7	Correlation matrix showing the correlations among the SNOT, Lund-Mackay CT score, Biedlingmaier mucosal grading and Biedlingmaier bony grading in patients with AFS	62
8	Correlation matrix showing the correlations among the SNOT, Lund-Mackay CT score, Biedlingmaier mucosal grading, and Biedlingmaier bony grading in patients with CRSsNP	65
9	Correlation matrix showing the correlations among the SNOT, Lund-Mackay CT score, Biedlingmaier mucosal grading, and Biedlingmaier bony grading in patients with CRSwNP	68
10	Comparison of the Biedlingmaier mucosal grading in patients with AFS, CRSsNP, or CRSwNP	71

List of tables (Cont.)

<i>Table</i>	<i>Title</i>	<i>Page</i>
11	Comparison of the Biedlingmaier bony grading in patients with AFS, CRSsNP, CRSwNP, or DNS	73
12	Comparison of the SNOT, Lund-Mackay CT score, and Biedlingmaier mucosal grading in patients with AFS, CRSsNP, or CRSwNP	76
13	Correlation matrix showing the correlations among the SNOT, Lund Mackay CT score, Biedlingmaier mucosal grading, and Biedlingmaier bony grading in patients with sinusitis	81
14	Comparison of the eosinophilia grading in patients with AFS, CRSsNP, or CRSwNP	85
15	Correlation between the eosinophilia grading and both bony grading and mucosal grading and in the whole patients	86

List of Figures

<i>Fig.</i>	<i>Title</i>	<i>Page</i>
1	Coronal CT scan shows maxillary ostium, uncinate process, ethmoid bulla (B), middle nasal turbinate (M), inferior nasal turbinate (I), and infraorbital ethmoid cells or Haller cells	9
2	Concha Bullosa	10
3	Uncinate process variations	11
4	Haller cell	12
5	EB: Ethmoidal bulla, U: Uncinate, MT: Middle turbinate	13
6	Agger nasi cell	14
7	Blood supply of PNS	15
8	Venous drainage of Frontal sinus	16
9	Nerve Supply of Lateral wall of nose	17
10	(A) The “osteitis” seen in primary CRS cases on radiology. (B) The hematoxylin and eosin stain demonstrating the additional woven bone that is laid down, often in the absence of significant local inflammatory cells	20
11	Bony thickening and hyperdensity noted in bilateral ethmoid partitions, with severe mucosal thickening	26
12	Characteristic CT appearance of osteitis in (A) maxillary, (B) sphenoid, and (C) frontal sinusesaller cell	26
13	Chronic sinusitis without nasal polyp (CRSsNP)	33

List of Figures (Cont.)

<i>Fig.</i>	<i>Title</i>	<i>Page</i>
14	Chronic sinusitis with nasal polyp (CRSwNP)	33
15	TGF Expression in CRSsNP and CRSwNP	35
16	Pathomechanisms of CRS	37
17	Allergic fungal sinusitis	42
18	Scatter plot showing the correlation between the Biedlingmaier mucosal grading and Biedlingmaier bony grading in the AFS group	63
19	Scatter plot showing the correlation between the SNOT and Lund-Mackay CT score in the CRSsNP group	66
20	Scatter plot showing the correlation between the Biedlingmaier mucosal grading and Biedlingmaier bony grading in the CRSsNP group	66
21	Scatter plot showing the correlation between the SNOT and Lund-Mackay CT score in the CRSwNP group	69
22	Scatter plot showing the correlation between the Biedlingmaier mucosal grading and Biedlingmaier bony grading in the CRSwNP group	69
23	Biedlingmaier mucosal grading in patients with AFS, CRSsNP, or CRSwNP	71

List of Figures (Cont.)

<i>Fig.</i>	<i>Title</i>	<i>Page</i>
24	Biedlingmaier bony grading in patients with AFS, CRSsNP, CRSwNP, or DNS	74
25	Box plot showing the Biedl-ingmaier bony grading in patients with AFS, CRSsNP, CRSwNP, or DNS	74
26	Box plot showing the SNOT in patients with AFS, CRSsNP, or CRSwNP	77
27	Box plot showing the Lund-Mackay CT score in patients with AFS, CRSsNP, or CRSwNP	78
28	Box plot showing the Biedlin-gmaier mucosal grading in patients with AFS, CRSsNP, or CRSwNP	79
29	Scatter plot showing the correlation between the SNOT and Lund-Mackay CT score in the whole sinusitis group	82
30	Scatter plot showing the correlation between the Biedlingmaier mucosal grading and Biedlingmaier bony grading in the whole sinusitis group	83
31	Tissue Eosinophilia grading in patients with AFS, CRSsNP and CRSwNP.	85
32	Scatter plot showing the correlation between the eosinophilia grading and Biedlin-gmaier bony grading in the whole patients group. Fitted line represents local regression smoothing (LOESS) trend line.	87

List of Figures (Cont.)

<i>Fig.</i>	<i>Title</i>	<i>Page</i>
33	Scatter plot showing the correlation between the eosinophilia grading and Biedlingmaier mucosal grading in the whole patients group. Fitted line represents local regression smoothing (LOESS) trend line.	87
34	CT paranasal sinuses (PNS) of control patient; coronal (A) and axial (B) cuts showing deviated nasal septum with clear sinus and normal ethmoidal bone density	88
35	LM photo for normal bone (magnification power 100x).	89
36	LM photo for normal bone (magnification power 100x): A = osteoblast, B = osteocytes, C = osteoid, D = cement line and D = bone.	89
37	CT PNS of AFS patient coronal (A) and axial cut (B), soft tissue window showing the characteristic “double density” sign.	90
38	CT PNS of AFS patient coronal (A) and axial (B) cuts, bone window showing marked increase in density of ethmoid bone “osteitis” grade I pathologically.	91
39	LM photo for Grade I, bony grading (magnification power 200x): Thickened periosteum over bone trabeculae.	92
40	LM photo for Grade II, mucosal grading (magnification power 100x): The subepithelial tissue shows mild to moderate scattered chronic inflammatory cells.	92

List of Figures (Cont.)

<i>Fig.</i>	<i>Title</i>	<i>Page</i>
41	LM photo for AFS patient (magnification power 400x): The subepithelial tissue shows high tissue eosinophilia >10/HPF	93
42	CT PNS of AFS patient coronal(A) and axial (B) cuts, bone window showing marked increase in density of ethmoid bone “osteitis” grade II pathological.	94
43	LM photo for Grade II, bony grading (magnification power 200x): Another case shows plump epithelioid cells and multiple osteoclasts with bone resorption and remodelling.	95
44	LM photo for Grade III, mucosal grading (magnification power 200x): The subepithelial tissue shows congested blood vessels and moderate chronic inflammatory cellular infiltrate.	95
45	LM photo for AFS patient (magnification power 400x): The subepithelial tissue shows moderate tissue eosinophilia 5-10/HPF.	96
46	CT PNS of AFS patient coronal(A) and axial (B) cuts, bone window showing marked increase in density of ethmoid bone “osteitis” grade III pathologically.	97
47	LM photo for Grade III, bony grading (magnification power 100x): Bone remodelling with increased osteoblastic and osteoclastic activity forming wide intercommunicating osteoid matrix.	98

List of Figures (Cont.)

<i>Fig.</i>	<i>Title</i>	<i>Page</i>
48	LM photo for Grade IV, mucosal grading (magnification power 100x): Complete ulceration of the surface epithelium with severe accumulation of chronic inflammatory cells.	98
49	LM photo for Grade IV, mucosal grading (magnification power 200x): Focal ulceration of the surface epithelium with extensive inflammatory cellular infiltrate in the lamina propria.	99
50	LM photo for AFS patient (magnification power 400x): The subepithelial tissue shows high tissue eosinophilia >10/HPF.	99
51	CT PNS of AFS patient coronal (A) and axial (B) cuts, bone window showing marked increase in density of ethmoid bone “osteitis”(arrow) grade IV pathologically.	100
52	LM photo for Grade IV, bony grading (magnification power 200x): Mild inflammatory cellular infiltrate and congested blood vessels between bone trabeculae.	101
53	LM photo for AFS patient (magnification power 400x): The subepithelial tissue shows high tissue eosinophilia >10/HPF.	101
54	CT PNS of CRSwNP patient coronal (A) and axial (B) cuts, bone window showing marked increase in density of ethmoid bone “osteitis” (grade I pathologically.	102
