Faculty of Science

Bacterial Degradation of Phenolic Compounds

A DISSERTATION

Presented to
Microbiology Department
Faculty of Science
Ain Shams University

By

Marwa Youssef Abdel-Salam Abdel-Rahman

Assistant Researcher
Water Pollution Research Department
National Research Centre
B.Sc. (2004); M. Sc. (2010) (Al-Azhar University)

For

The Degree of
Doctor of Philosophy in *Science, PhD*
(*Microbiology*)

2018

Ain Shams University

Faculty of Science

Bacterial Degradation of Phenolic Compounds

A Thesis

Submitted By

Marwa Youssef Abdel-Salam Abdel-Rahman

Assistant Researcher

Water Pollution Research Department

National Research Centre

B.Sc. (2004); M. Sc. (2010) (Al-Azhar University)

PhD Thesis

Under the Supervision of

Dr. Einas H. El- Shatoury

Assistant Prof. of Microbiology, Faculty of Science, Ain Shams University

Dr. Gamila E. El-Taweel

Professor of Water Microbiology, Water Pollution Research Department,
National Research Center

Dr. Sahar Saad Ali

Assistant Prof. of Chemical Engineering, Chemical Engineering Department,
National Research Center

Bacterial Degradation of Phenolic Compounds

By

Marwa Youssef Abdel-Salam Abdel-Rahman

Assistant Researcher

Water Pollution Department

National Research Centre

B.Sc. (2004); M. Sc. (2010) (Al-Azhar University)

Supervisors:

Dr. Einas H. El- Shatoury

Assistant Prof. of Microbiology,
Faculty of Science, Ain Shams
University

.....

Dr. Gamila E. El-Taweel

Professor of Water Microbiology,
Water Pollution Research
Department, National Research
Center

.....

Dr. Sahar Saad Ali

Assistant Prof. of Chemical
Engineering, Chemical
Engineering Department,
National Research Center

.....

This thesis for Ph.D. degree in Microbiology has been approved by:

Referees:

Dr. Magda A. El-Meligy

Professor of Microbiology,
Faculty of Science, Al-Azhar
University

.....

Dr. Soaad Ahmed Abdullah

Professor of Microbiology,
Girl's college, Ain Shams
University

.....

Dr. Einas H. El- Shatoury

Assistant Prof. of
Microbiology, Faculty of
Science, Ain Shams
University

.....

Dr. Gamila E. El-Taweel

Professor of Water
Microbiology, Water Pollution
Research Department,
National Research Center

.....

Acknowledgment

I would like to express my sincere thanks and deep gratefulness to my supervisor **Dr. Einas H. El-Shatoury** Assistant Prof. of Microbiology, Faculty of Science, Ain Shams University, for her constructive suggestions, fruitful guidance, help and support for me during the time of research and writing of this thesis.

I am deeply indebted to my supervisor **Prof. Dr. Gamila. E. El-Taweel**, Professor of Water and Wastewater Microbiology, Water Pollution Research Department, National Research Center, for her important support and valuable suggestions throughout this work and also for providing all facilities to complete this thesis.

I am grateful to **Dr. Sahar Saad Ali** Assistant Prof. of Chemical Engineering, Chemical Engineering Department, National Research Center, for her suggestions, fruitful guidance and for her encouragement to me during all stages of preparing this thesis.

I am grateful to **Prof. Dr. Mohamed M. Kamel**, Professor of Water and Wastewater Microbiology, Water Pollution Research Department, National Research Centre, for his support throughout this work.

I would like to express my sincere gratitude and thanks to **Prof. Dr. Mohamed A. Abou-Zeid**, Professor and Head of Microbiology Department, Faculty of Science, Ain Shams University and also to **all staff members of Microbiology Department, Faculty of Science, Ain Shams University** for helping me to register and complete this thesis.

I am also grateful for the cooperation and assistance of **all the members of Environmental Microbiology Lab.**, Water Pollution Research Department, National Research Centre.

Finally, no words can express my deep gratitude and appreciation to **my parents, my sister, my husband, my children Malak & Youssef and all my family members**, for their everlasting love, continuous encouragement and support that helped me to go ahead with my thesis.

Marwa Youssef Abd El-Salam

Abstract.....	XXVIII
Introduction.....	1
Aim of the work.....	4
Review of Literature.....	5
1. Industrial pollution.....	5
2. Phenolic pollution source.....	6
3. Properties and chemical composition of some phenolic compounds.....	8
4. Hazardous of phenolic pollution and the regulatory rules.....	11
5. Treatment methods for the removal of phenolic wastes.....	13
6. Factors affecting biodegradation of phenolic compounds.....	20
6.1. pH.....	20
6.2. Cell density.....	21
6.3. Chemical structure of substrate.....	22
6.4. Initial concentration of substrate.....	22
6.5. Nitrogen source.....	23
6.6. Additional carbon source.....	24
6.7. Vitamins.....	25

Contents (Cont...)

7. Cell immobilization.....	26
8. Hybrid sequencing batch reactor for treatment of pharmaceutical wastewater.....	33
Materials and Methods.....	36
1. Materials.....	36
2. Enrichment, Isolation and Purification of Phenolic Compounds Degrading Bacterial Isolates.....	36
3. Screening of Phenolic Compounds Degrading Bacterial Isolates and Selection of the Most Potent Degraders.....	39
3.1. Determining the residual of phenolic compounds.....	41
3.2. Determining the Optical Density of Bacterial Cell Populations.....	42
3.3. Determination of Dry Biomass.....	42
4. Identification of the Most Efficient phenolic compounds Degrading Bacterial Isolates.....	42
4.1. The Biolog System.....	43
4.2. 16s rDNA sequencing.....	46
5. Optimization of Conditions for the Degradation of each Phenolic Compound by its Specified Defined Bacterial Consortium.....	48
5.1. Preparation of cultures.....	48
5.2. Degradation experiments.....	49
5.2.1. Effect of pH.....	50
5.2.2. Effect of cell density.....	51

Contents (Cont...)

	Page
5.2.3. Effect of nitrogen source and the optimum concentration of the appropriate source.....	51
5.2.4. Effect of vitamins.....	52
5.2.5. Effect of additional carbon source and the optimum concentration of the selected one.....	53
5.2.6. Effect of different initial concentrations of phenolic compounds.....	54
6. Immobilization Technique.....	54
6.1. Carriers used for cell immobilization.....	54
6.2. Preparation of bacterial cultures.....	55
6.3. Immobilization procedure.....	56
6.3.1. Immobilization by adhesion and formation of biofilm on Nylon sheet (N-SH).....	56
6.3.2. Immobilization by encapsulation in Sodium Alginate (SA).....	56
6.3.3. Immobilization by encapsulation in Polyvinyl alcohol - Sodium Alginate (PVA – alginate).....	57
6.3.4. Immobilization by attachment and entrapment in polyurethane foam (PUF).....	58
6.4. Relative mechanical strength, stability and reusability of immobilized cells test	58
6.5. Scanning Electron Microscopy (SEM)...	59

Contents (Cont...)

	Page
6.6. Biodegradation test with free and immobilized cells.....	60
6.7. Analytical methods.....	61
7. Hybrid sequencing batch reactor (HSBR) set-up.....	63
8. Culture Media.....	66
Results	68
Section (A).....	68
1. Enrichment, Isolation and Purification of Phenolic Compounds Degrading Bacterial Isolates.....	69
2. Screening of Phenolic Compounds Degrading Bacterial Isolates and Selection of the Most Efficient Degraders.....	69
2.1. Screening of phenol bacterial degraders.....	70
2.2. Screening of 2, 4- dichlorophenol bacterial degraders.....	75
2.3. Screening of 4- methoxyphenol bacterial degraders.....	79
3. Identification of the Most Efficient Phenolic Compounds Degrading Bacterial Isolates by Biolog System and 16s rDNA Sequence.....	84
3.1. Identification by Biolog System.....	84
3.2. Identification by 16s rDNA Sequence..	92

Arabic Summary	

List of Tables

Table No.	Title	Page
1	Properties and chemical composition of phenol, 2, 4-dichlorophenol and 4-methoxyphenol.....	9
2	Layout of assays in GEN III MicroPlate TM.....	45
3	Growth of phenol degrading bacterial isolates in mineral salts medium at phenol concentration 300 ppm.....	72
4	Growth of phenol degrading bacterial isolates in mineral salts medium at phenol concentration 400 ppm.....	73
5	Growth of phenol degrading bacterial isolates in mineral salts medium at phenol concentration 500 ppm.....	74
6	Growth of phenol degrading bacterial isolates in mineral salts medium at phenol concentration 600 ppm.....	75
7	Growth of 2, 4- dichlorophenol degrading bacterial isolates in mineral salts medium at concentration 40 ppm.....	77
8	Growth of 2, 4- dichlorophenol degrading bacterial isolates in mineral salts medium at concentration 50 ppm.....	78
9	Growth of 2, 4- dichlorophenol degrading bacterial isolates in mineral salts medium at concentration 60 ppm.....	79
10	Growth of 4- methoxyphenol degrading bacterial isolates in mineral salts medium at concentration 40 ppm.....	81
11	Growth of 4- methoxyphenol degrading bacterial isolates in mineral salts medium at concentration 50 ppm.....	82

List of Tables (Cont...)

Table No.	Title	Page
12	Growth of 4- methoxyphenol degrading bacterial isolates in mineral salts medium at concentration 60 ppm.....	83
13	Biodegradation of 400 mg L ⁻¹ of phenol by its specified bacterial consortium at different pHs.....	104
14	Biodegradation of 2, 4- dichlorophenol by its specified bacterial consortium at different pHs.....	106
15	Biodegradation of 4- methoxyphenol by its specified bacterial consortium at different pHs.....	108
16	Biodegradation of phenol by its specified bacterial consortium at different volumes of the biomass (with cell density 2 OD ₆₀₀).....	113
17	Biodegradation of 2, 4- dichlorophenol by its specified bacterial consortium at different volumes of the biomass (with cell density 2 OD ₆₀₀).....	115
18	Biodegradation of 4- methoxyphenol by its specified bacterial consortium at different volumes of the biomass (with cell density 2 OD ₆₀₀).....	117
19	Biodegradation of phenol by its specified bacterial consortium with different nitrogen sources.....	123
20	Biodegradation of 2, 4- dichlorophenol by its specified bacterial consortium with different nitrogen sources.....	125
21	Biodegradation of 4- methoxyphenol by its specified bacterial consortium with different nitrogen sources.....	127
22	Biodegradation of phenol by its specified bacterial consortium with different concentrations of ammonium chloride.....	132
23	Biodegradation of 2, 4- dichlorophenol by its specified bacterial consortium with different concentrations of ammonium chloride.....	134

List of Tables (Cont...)

Table No.	Title	Page
24	Biodegradation of 4- methoxyphenol by its specified bacterial consortium with different concentrations of ammonium chloride.....	136
25	Biodegradation of phenol by its specified bacterial consortium with the presence of different vitamins at the optimal values of different other parameters.....	142
26	Biodegradation of 2, 4- dichlorophenol by its specified bacterial consortium with the presence of different vitamins at the optimal values of different other parameters.....	144
27	Biodegradation of 4- methoxyphenol by its specified bacterial consortium with the presence of different vitamins at the optimal values of different other parameters.....	146
28	Biodegradation of phenol by its specified bacterial consortium with the presence of different concentrations of the selected vitamins at the optimal values of different other parameters.....	152
29	Biodegradation of 2,4- dichlorophenol by its specified bacterial consortium with the presence of different concentrations of the selected vitamins at the optimal values of different other parameters.....	154
30	Biodegradation of 4- methoxyphenol by its specified bacterial consortium with the presence of different concentrations of the selected vitamins at the optimal values of different other parameters.....	156
31	Biodegradation of phenol by its specified bacterial consortium with different additional carbon sources at the optimal values of different other parameters.....	161
32	Biodegradation of 2, 4- dichlorophenol by its specified bacterial consortium with different additional carbon sources at the optimal values of different other parameters.....	163

List of Tables (Cont...)

Table No.	Title	Page
33	Biodegradation of 4- methoxyphenol by its specified bacterial consortium with different additional carbon sources at the optimal values of different other parameters.....	165
34	Biodegradation of phenol by its specified bacterial consortium with different concentrations of additional carbon source (lactose) at the optimal values of different other parameters.....	172
35	Biodegradation of 2, 4- dichlorophenol by its specified bacterial consortium with different concentrations of additional carbon source (sucrose) at the optimal values of different other parameters.....	174
36	Biodegradation of 4- methoxyphenol by its specified bacterial consortium with different concentrations of additional carbon source (lactose) at the optimal values of different other parameters.....	176
37	Biodegradation of different initial concentrations of phenol by its specified bacterial consortium at the optimal values of the previous studied parameters.....	183
38	Biodegradation of different concentrations of 2, 4- dichlorophenol by its specified bacterial consortium at the optimal values of the previous studied parameters..	185
39	Biodegradation of different concentrations of 4- methoxyphenol by its specified bacterial consortium at the optimal values of the previous studied parameters..	187
40	Degradation of phenol at concentration 1500 mg L ⁻¹ by freely suspended bacterial consortium and by bacterial consortium immobilized on PVA- alginate and on PUF.....	211
41	Degradation of phenol at concentration 2000 mg L ⁻¹ by freely suspended bacterial consortium and by bacterial consortium immobilized on PVA-alginate and on PUF.....	212
