**PCR gene detection among HARMONY collection of  
*Staphylococcus aureus* from bovine milk and human  
nasal carriage epidemiological and genetic findings**

**A thesis presented by**

**Alaa Tharwat Abd El Monem**  
B.V.Sc. (2006), Beni Suief University

**For the degree of M.V.Sc.in Veterinary Medical Science  
Microbiology (Bacteriology, Immunology and Mycology)**

**Under the supervision of**

**Prof. Dr. Wagih Armanious Gad El Said**  
Professor of Microbiology  
Faculty of Veterinary Medicine  
Cairo University

**Prof. Dr. Sabry Darwish Morgan**  
Professor of Milk Hygiene and Control  
Faculty of Veterinary Medicine  
Cairo University

**Lec. Dr. Rasha Mohammed Mahmoud Khairy**  
Lecturer of Microbiology  
Faculty of Human Medicine  
Minia University

**(2015)**

Cairo University  
Faculty of Veterinary Medicine  
Department of Microbiology

## Approval Sheet

This is to approve that the dissertation presented by

**Alaa Tharwat Abd El-Monem**

For M.V.Sc.Degree (Bacteriology, Immunology and Mycology)  
has been approved by the examining committee.

*PCR gene detection among harmony collection of  
Staphylococcus aureus from bovine milk and human nasal  
carriage. Epidemiological and genetic findings.*

**Prof. Dr. Mohamed Nabel Hassan**

Professor of Microbiology, Faculty of Veterinary Medicine, Zagazig,  
University.

**Prof. Dr. Hydee Mohamed Shawky**

Professor of Microbiology, Faculty of Veterinary Medicine, Cairo  
University.

**Prof. Dr. WAGIH ARMANIOUS GAD EL SAID**

Professor of Microbiology, Faculty of Veterinary Medicine, Cairo  
University. (Supervisor)

**PROF. DR. SABRY DARWISH MORGAN**

Professor of Milk Hygiene and Control, Faculty of Veterinary Medicine,  
Cairo University (Supervisor)

/ / 2015

**Faculty of Veterinary medicine  
Microbiology Department**

**Cairo University**

## **Supervision Sheet**

**Prof. Dr. Wagih Armanious Gad El Said**

Professor of Microbiology  
Faculty of Veterinary Medicine  
Cairo University.

**Prof. Dr. Sabry Darwish Morgan**

Professor of Milk Hygiene and control  
Faculty of Veterinary Medicine  
Cairo University.

**Dr. Rasha Mohammed Mahmoud Khairy**

Lecturer of Microbiology  
Faculty of Human Medicine  
Minia University.

**(2015)**

**Name:** Alaa Tharwat Abd El Monem.

**Date and place of birth:** 31/3/1985-Minia.

**Nationality:** Egyptian.

**Degree:** Master in Veterinary Medicine Sciences.

**Specialty:** Bacteriology, Immunology and Mycology.

**Supervisors:**

**Prof.Dr.Wagih Armanious Gad El Said**

Professor of Microbiology, Faculty of Veterinary Medicine, Cairo University.

**Prof.Dr.Sabry Darwish Morgan**

Professor of Milk Hygiene and control, Faculty of Vet. Medicine, Cairo University.

**Dr. Rasha Mohammed Mahmoud Khairy**

Lecturer of Microbiology, Faculty of Human Medicine, Minia University.

**Title of thesis:"** PCR gene detection among HARMONY collection of *Staphylococcus aureus* from bovine milk and human nasal carriage epidemiological and genetic findings"

### **Abstract**

**"PCR gene detection among HARMONY collection of *Staphylococcus aureus* from bovine milk and human nasal carriage epidemiological and genetic findings" Alaa Tharwat Abd El Monem. Cairo Univ. Fac. Vet. Med. Thesis; M.V.Sc.; Bacteriology, Immunology and Mycology, 2015.**

*Staphylococcus aureus* (*S.aureus*) is considered one of the most important pathogens to humans and animals. The emergence of methicillin-resistant *S. aureus* (MRSA) strains and other antimicrobial agents has become a major concern. 316 samples (216 from Bovine milk and 100 from nasal swabs of human) from Minia governorate were used in this study for isolation and identification of *S.aureus* from milk in healthy & diseased animals as well as from human nasal carriers, detection of the diversity between animal and human isolates by using phenotypic methods and amplification of certain genes; *coa* and *mecA* using PCR. All *S. aureus* isolates of the study (45) showed expression of *mec A* gene, although 96.77% of bovine isolates only was cefoxitin resistant by disk diffusion method so the detection of *mec A* gene is important for determination of MRSA. The 30 isolates of bovine milk showed 7 types of *coa* gene. The sizes of PCR amplicons obtained ranged from approximately 80 to approximately 640 bps. On the other hand the 14 isolates of human nasal swabs showed 6 types of *coa* gene, the size of PCR amplicons obtained after amplification of isolates from human nasal swabs ranged from approximately 80 to approximately 800 bps. It was noted that one isolate from bovine milk, identified as coagulase positive by tube coagulase test was found to be negative with PCR amplification of the gene, so the use of both phenotypic and molecular detection of *S. aureus* strains is very important. In conclusion, molecular techniques remain the most sensitive methods in detecting *S. aureus*, and with 100% accuracy in detecting MRSA. This study has shown that mastitis in the studied regions was caused by *S. aureus* strains harboring more than one *coa* genotype. This indicates that the source of infection may be transmitted from animal to human or vice versa.

**Key words:** *S. aureus*, Antimicrobial sensitivity, MRSA, MSSA, *Mec A* and *Coa* genes.

## *Dedication*

*My father and my mother*

*My brother  
(Abd El-Khalek)*

*My sisters  
(Shaimaa and Mariem)*

*My husband  
(Mahmoud El –Lithy)*

*My Little baby  
(Goody)*

## *Acknowledgement*

*In the name of Allah, the Most Gracious and the Most Merciful Alhamdulillah, We praise Him, seek His help, and ask for His forgiveness. I am thankful to Allah, who supplied me with the courage, the guidance, and all praises to Allah for the strengths and His blessing in completing this thesis.*

*Special thanks and My sincere appreciations go to Professor Dr. Wagih A. Gad El – Said. Professor of Microbiology, Department of Microbiology, Faculty of Veterinary Medicine Cairo University, who reviewed my thesis in advance and gave me his comments to improve my defense presentation. I am truly thankful for his steadfast integrity and selfless dedication to both my personal and academic development.*

*I express my profound sense of reverence to my promoter Professor Dr. Sabry Darwish Morgan. Professor of milk Hygiene and control, Department of Food Hygiene and control, Faculty of Veterinary Medicine Cairo University, who gave me the opportunity to work in the department of Food Hygiene and control. His continuous support, motivation and untiring guidance have made this dream come true. His vast knowledge, calm nature and positive criticism motivated me to starve for nice results.*

*I also would like to express my deepest gratitude to lecturer Dr. Rasha M. Khiry, lecturer of Microbiology, Department of Microbiology, Faculty of Medicine Minia University. my graduate advisor, who always believed in me and never hesitate to provide relentless*

*support and motivation at all times for her critical but valuable suggestions for my thesis and for supporting me during these past five years . And for her excellent guidance, caring, patience.*

*I especially thank my mom, dad, brother and sisters. And special thanks go my best friends (too many to list here) for Nemat Ibrahim and Asmaa Abdel- latif.*

*Last but not least, I wish to express my sincere thanks to all those who have one way or another helped me in making this study a success.*
