Study of Physical Properties of Some Quinolinone Derivatives

Thesis Presented by

Sara Mohamed Atef Abd El-hady Abd El-naby Sakr

*For the Doctor of Philosophy Degree of Teacher Preparation in Science
(Solid State Physics)*

Supervised by

Prof. Dr. Hoda Shehata Soliman

Professor of Solid State Physics

Faculty of Education, Ain Shams University

Prof. Dr. Medhat Ahmed Abdel Khalek Ibrahim

Professor of Applied Spectroscopy

Head of Spectroscopy Department, National Research Center

Dr. Mohamed Ahmed Mohamed El Mansy

Lecturer of Theoretical Physics

Faculty of Education, Ain Shams University

Ain Shams University
Faculty of Education
Physics Department

Researcher name: Sara Mohamed Atef Abd El-hady Abd El-naby
Sakr

Title of the thesis: Study of Physical Properties of Some
Quinolinone Derivatives

Submitted to : Physics Department, Faculty of Education, Ain
Shams University.

Supervisors:

- 1- Prof. Dr. Hoda Shehata Soliman
- 2- Prof. Dr. Medhat Ahmed Abdel Khalek Ibrahim
- 3- Dr. Mohamed Ahmed Mohamed El Mansy

Approval sheet

Title : Study of Physical Properties of Some Quinolinone Derivatives

Candidate: Sara Mohamed Atef Abd El-hady Abd El-naby Sakr

Degree : Doctor of philosophy degree of Teacher Preparation in science (Physics)

Board of Advisors

Approved by:

1- Prof. Dr. Hoda Shehata Soliman

Professor of solid state physics

Faculty of Education, Ain Shams University

2- Prof. Dr. Medhat Ahmed Abdel Khalek Ibrahim

Professor of Applied Spectroscopy

Head of Spectroscopy Department, National Research Center

3- Dr. Mohamed Ahmed Mohamed El Mansy

Lecturer of Theoretical Physics

Faculty of Education, Ain Shams University

Date of Presentation: / / 2017

Post graduate studies:

Stamp: / / 2017

Date of Approval: / / 2017

Approval of Faculty Council: / / 2017

Approval of University Council: / / 2017

Abstract	x
Summery	xi

Chapter I

Theoretical Background

1.1 Computational Physics	1
1.2 Computational Modeling	1
i. Molecular Mechanics	2
ii. Electronic Structure Method	2
a. Semi-Empirical Method	3
b. ab Initio Method	3
1.3 Many-Body Problem	4
i. Hartree Method	5
ii. Fock Method	6
iii. Hartree-Fock Method	6
iv. Density Functional Theory	7
1.4 The ab Initio Modeling Program Package	9
i. Gaussian 09 Package	9
ii. Basis Sets	10
1.5 Optical Properties of Materials	13
1.6 Semiconducting Properties of Organic Materials	15
1.7 Infrared (IR) Spectroscopy	18
i. Theory of Infrared Absorption	18
a. Transition Probability	19
b. Dipole Moment	20
c. Molecular Vibrations (Classical Mechanics).....	21
d. Vibration of Polyatomic Molecule	22
e. Normal Modes of Vibrations	23

Contents

f. Types of Vibrational Transitions	23
g. Molecular Symmetry	24
h. Point Groups	27
i. Origin of Molecular Vibrations	27
j. A Notation for Symmetry Types	29
1.8 Theory of Light Absorption	29
i. Mechanisms of Optical Absorption	30
ii. The Absorption Coefficient and The Optical Band Gap	32
iii. Allowed and Forbidden Transitions	35
iv. Classification of Electronic Transitions	36
v. Measurement of Light Absorption	37
vi. Absorption Intensity; Oscillator Strength	38
1.9 UV/Vis Spectroscopy	39
1.10 Dispersion in Semiconductor Materials	40
i. Single Effective Oscillator Model (Lorentz-Lorentz Model)	40
ii. Cauchy Dispersion Relation	40
iii. Drude Model (Free Electrons Contribution)	41
1.11 Theory of organic photovoltaic (OPV) solar cell	41
i. Fundamentals of OPV solar cell	41
ii. Formulation	47
iii. Transport Mechanisms	48
a. Ohmic Mechanism	48
b. Space Charge Limited Current (SCLC) Mechanisms	49
c. Thermionic Emission Mechanism	51
d. Direct Tunneling Mechanism	53
iv. Equivalent Circuit	53
v. Device Characterization	54

Chapter II

Literature Review

Literature Review	56
-------------------------	----

Contents

Chapter III **Experimental Techniques**

3.1 Material Under Investigation	93
3.2 Sample Preparation	94
3.2.1 Substrate Cleaning.....	94
3.2.2 Thin films preparation.....	95
3.3 Film Thickness Measurements	97
3.3.1 Quartz Crystal Thickness Monitor	98
3.3.2 Interferometric Method	99
3.4 Structural Investigation	102
3.4.1 Fourier Transform Infrared (FTIR) Spectroscopy	102
3.4.2 X-Ray Diffraction (XRD)	103
3.5 Optical Measurements	106
3.5.1 Film Transmittance and Reflectance	106
3.5.2 Optical Constants Determination	109
3.5.3 Cyclic voltammetry.....	110
3.6 Preparation and Electrical Measurements for Au/ CPQ /p-Si/Al Heterojunction	113
3.6.1 Devices Preparation	113
3.6.2 Current-Voltage (I-V) Characteristics Measurements..	114

Chapter IV **Results and Discussion**

4.1 Structural Properties	116
4.1.1 Computational Details	116
4.1.2 Optimized Molecular Geometry	117
4.1.3 Vibrational Assignments	118
i. C–H Vibrations	123
ii. C≡N Vibrations	124
iii. C=O, C=C Vibrations	124
iv. Methyl Group Vibrations.....	124
v. C-O, C-N, C-C Vibrations	125
4.1.4 Thermochemistry	125
4.1.5 Frontier Molecular Orbitals and Its Related Physical Parameters.....	127

Contents

4.1.6 Polarizability and First Order Hyperpolarizability Calculations.....	128
4.1.7 Manipulating Magnetic Field Effects on CPQ.....	130
4.1.8 Molecular Electrostatic Potential Surface Analysis.....	132
4.1.9 X-Ray Diffraction Pattern (XRD).....	134
4.2 Optical Properties	139
4.2.1 Transmittance, T, and Reflectance, R, Spectra.....	139
4.2.2 Absorption Coefficient Calculation.....	140
4.2.3 Molar Extinction Coefficient.....	142
4.2.4 Energy Gap Determination.....	144
4.2.5 Optical Constants of Thin Films.....	148
4.2.6 Dispersion Analysis.....	149
i. Single Oscillator Model.....	149
ii. Lorentz - Drude Model.....	150
4.2.7 Other Optical Dispersion Parameters.....	152
4.3 Characterization of Au/CPQ/p-Si/Al heterojunction	157
4.3.1 Dark (I-V) characteristics	157
4.3.2 Series and Shunt Resistances.....	158
4.3.3 Conduction Mechanism	160
4.3.4 Illuminated (J-V) Characteristics	166
 Conclusions	 168
References	171
