Engineer's Name: Mohamed Adel Mohamed AbdElnabi

Date of Birth: 15/2/1992

Nationality: Egyptian

E-mail: mohamedadel@eng.cu.edu.eg

Phone: 002 0111 43285979

Address: El Fath St. – Dar Elsalam - Cairo - Egypt

Registration Date: 01/10/2013

Awarding Date: 2016

Degree: Master of Science

Department: Structural Engineering

Supervisors: Prof. Dr. Hamed M. Salem

Examiners: Prof. Dr. Hamed M. Salem

Prof. Dr. Magdy Elsayed Kasim

Prof. Dr. Baher labib AbouStait (Professor of Structural Engineering, Misr
University for Science and Technology)

Title of Thesis:

Assessment of seismic response reduction factor of multistorey reinforced concrete structures with shear walls resisting system using nonlinear dynamic analysis.

Key Words:

Response Reduction factor, ductility, over-strength, Redundancy, AEM, ELS, seismic design.

Summary:

Many studies have endeavored to quantify the potential of the structural system to delimit the seismic force level imposed by virtue of their ductility and energy absorption capacity. The response modification factor (R) is defined as the ratio of the absolute maximum linear elastic base shear to the absolute maximum nonlinear base shear of structure subjected to the same earthquake acceleration. The response modification factor (R) depends on over-strength (R_s), ductility (R_μ), and redundancy (R_r). In the current study, the R factor is investigated for multistory reinforced concrete flat slab structures where the lateral forces are resisted solely by shear walls. A non-linear time-history dynamic analysis based on the Applied Element Method was carried out on ten stories RC flat slab structure with shear wall resisting system for lateral loads. A parametric study was carried out to investigate the effect of different parameters on the R factor such as earthquake acceleration magnitude, height of the building, reinforcement ratio of shear walls, and material strength. The results showed that the value of (R) depends not only on structure dynamic properties but also on its nonlinearity and on earthquake magnitude which is not considered in the current world wide design codes.

Dedication

**I dedicate this work to my Father, Mother, Brother,
and Sister for their continuous help, encouragement
and support.**

Acknowledgement

Thanks to ALLAH for helping me finish this work.

Thanks to Prof. Dr. Hamed Hadhoud for his guidance, help, motivation, and support.
