Geophysical and Hydrogeological Investigations
On Some Ground Water Problems At The Area
Between Fuka and Ras Umm El-Rakham,
Mediterranean Coastal Zone, Egypt

A Thesis
Submitted to the Faculty of Science
Alexandria University

For
The Degree of Doctor of Philosophy of Science
in Geology

By
Anwar Abdel Aziz Ahmed El Fiky

B.Sc. in Geology with honour (1984)

M.Sc. in Geology (1990)

Supervised By

The late Prof. Dr.
M.H. El Zarka
Prof. of Geology
Faculty of Science
Alexandria University

Prof. Dr.
A.A. Selim
Prof. of Geology
Faculty of Science
Alexandria University

Prof. Dr.
Th. A. Abdel Fattah
Prof. of Geology
Faculty of Science
Alexandria University

Dr.
M.H. Farag
Assistant Prof. of Geology
Faculty of Science
Alexandria University

Geology Department

CHAPTER I INTRODUCTION

1. General outline	1
2. Previous studies	4
3. Scope of the present work	15

CHAPTER II REGIONAL GEOLOGY

1. General outline	17
2. Regional geomorphology	17
2.1. The northern coastal plain	18
2.1.1. The beaches	20
2.1.2. Sand dune accumulations	20
2.1.3. The coastal ridges	20
2.1.4. The elongated depressions	22
2.2. The piedmont plain	24
2.3. The southern tableland	24
3. Stratigraphy	25
3.1. Quaternary	27
3.1.1. Holocene deposits	27
3.1.2. Pleistocene sediments	28
3.2. Neogene	30
3.2.1. Pliocene sediments	30
3.2.2. Miocene sediments	31
3.3. Pre-Neogene rocks	33
3.3.1. Upper Eocene-Oligocene (Dabaa Formation)	33
3.3.2. Paleocene-Eocene (Appollonia Formation)	33
3.3.3. Cretaceous	35
3.3.4. Jurassic	35
3.3.5. Paleozoic	35

4. Geologic structures	36
5. Geologic history	39

CHAPTER III

REGIONAL HYDROGEOLOGY

1. General outline	42
2. Hydrometeorology	43
2.1. Air temperature	43
2.2. Relative humidity	43
2.3. Precipitation	45
2.4. Wind speed	45
3. Hydrophysiography and drainage pattern	47
4. Surface hydrology	49
4.1. Evaporation and evapotranspiration	49
4.2. Surface runoff	62
4.3. Infiltration	65
5. Groundwater aquifers	66
5.1. The dune sand accumulations (Holocene)	67
5.2. The oolitic limestone (Pleistocene)	67
5.3. The fissured limestone (Middle Miocene)	68
6. Groundwater conditions	69
6.1. The main water table	69
6.2. The perched water table	69
7. Salt-water intrusion into coastal-plain aquifers	70
7.1. Outline of the problem	70
7.2. Fresh-saline water equilibria in coastal plain aquifers	71
7.2.1. Static-static equilibrium	71
7.2.2. Dynamic-static equilibrium	73
7.2.3. Dynamic-dynamic equilibrium	76
7.3. Causes of salt-water intrusion into coastal aquifers	76
7.4. Effect of salt-water intrusion on groundwater supplies	78
8. Hydrogeological investigation	78
8.1. Fuka area	79
8.1.1. Hydraulic parameters of the Fuka perched aquifer	85
8.1.2. Groundwater storage in the Fuka perched aquifer	96
8.2. Bagush area	99
8.3. El Qasr area	102

8.4. Umm El Rakham area	106
-------------------------------	-----

CHAPTER IV

GEOPHYSICAL INVESTIGATION

1. General outline	110
2. Geoelectrical resistivity method	110
2.1. Applications of the electrical resistivity method	111
2.2. Apparatus and equipment used	112
2.3. Method used	112
2.4. General measuring techniques	115
2.4.1. Horizontal profiling technique (HP)	115
2.4.2. Vertical Electrical Sounding technique (VES)	115
2.5. Field work	115
2.6. Interpretation of resistivity sounding data	116
2.6.1. Qualitative interpretation	118
2.6.2. Indirect quantitative interpretation	118
2.6.3. Direct quantitative interpretation	120
3. Field survey at the different areas	128
3.1. Data processing, analysis and interpretation	129
3.1.1. Fuka area	130
3.1.2. Bagush area	134
3.1.3. El Qasr area	142
3.1.4. Umm El Rakham area	144
3.2. Approximate porosity determination	147

CHAPTER V

HYDROCHEMISTRY

1. General outline	150
2. Geochemistry of the aquifer materials	151
3. Fuka area	153
3.1. Seasonal variations in the concentrations of the different major ions	154
3.2. Hydrochemical coefficients (ionic ratios)	154
3.3. Semi-logarithmic plotting method (Schoeller's diagram)	158
3.4. Piper's trilinear diagram	158
3.5. Expanded Durov's diagram	163
4. Bagush area	167

4.1. Areal distribution of salinity and major ions	167
4.2. Changes of groundwater chemistry in a west-east direction	175
4.3. Piper's trilinear diagram	177
4.4. Expanded Durov's diagram	182
5. El Qasr area	184
5.1. Areal distribution of salinity and major ions	184
5.2. Changes of groundwater chemistry in a west-east direction	192
5.3. Piper's trilinear diagram	195
5.4. Expanded Durov's diagram	197
6. Umm El Rakham area	197
6.1. Areal distribution of salinity and major ions	197
6.2. Changes of groundwater chemistry in horizontal direction	206
6.2.1. Hydrochemical profile A-A'	206
6.2.2. Hydrochemical profile B-B'	208
6.3. Piper's trilinear diagram	212
6.4. Expanded Durov's diagram	212
7. General hydrochemical characteristics of groundwaters at the study areas	215

CHAPTER VI

CORRELATION AND INTEGRATION BETWEEN HYDROGEOLOGICAL, HYDROCHEMICAL AND GEOPHYSICAL RESULTS

1. Fuka area	217
2. Bagush area	219
3. El Qasr area	221
4. Umm El Rakham area	225

CHAPTER VII

EVALUATION OF GROUNDWATER QUALITY

1. General outline	232
2. Evaluation of groundwater quality for drinking and domestic uses	232
3. Evaluation of groundwater quality for irrigation purposes	236
3.1. The U.S. Salinity Laboratory classification (1954)	237
3.1.1. Total salt concentration hazard	237
3.1.2. Sodium hazard	239
3.2. Eaton's classification (bicarbonate hazard)	245
3.3. Concentrations of specific trace elements	246

CHAPTER VIII

SUMMARY AND CONCLUSIONS 247

REFERENCES 259

APPENDICES

ARABIC SUMMARY

ACKNOWLEDGEMENTS

I would like to thank Prof. Dr. M.A. Abdel Rehim, Head of Geology Department, Faculty of Science, Alexandria University, for the facilities offered during the preparation of this work. I am greatly indebted to late Prof. Dr. M.H. El Zarka, Geology Department, Faculty of Science, Alexandria University, from whom I benefited greatly. He recommended the study area and the work plan. I closely worked with him throughout the initial stages of this study; I found in him a true academician and I will always remember him with respect. My special thanks and gratitude are due to Prof. Dr. A.A. Selim, Geology Department, Faculty of Science, Alexandria University, for his supervision, guidance and continuous encouragement throughout the critical stages of this work. I wish to express my sincere gratitude to Prof. Dr. Th.A. Abdel Fattah, Geology Department, Faculty of Science, Alexandria University, for his supervision, support, help during field work and for the information and knowledge gained through reading the manuscript. My most sincere thanks go to Dr. M.H. Farag, Geology Department, Faculty of Science, Alexandria University, for his supervision, fruitful discussions and constructive criticism.

My thanks are also due to Prof. Dr. Y. El Abd, Department of Physics, Faculty of Science, Alexandria University, for providing the field instruments used in this work. I would like to thank Mr. M. Ismail, Mr. M. El Maghraby and Mr. A. Morsy, for their help during the geoelectrical field survey. My deepest gratitude is also due to Prof. Dr. M. El Askary, Dr. A. Moghazy, Dr. M. Naser and Dr. M. Mersal for their fruitful discussions and continuous encouragement during the final stages of this work. I wish to express my gratitude and appreciation to my fiancée for typing the manuscript. I am also grateful to Mr. A. Abdel Basset and Mr. S. El Masry for their continuous encouragement and fruitful linguistic discussions.

My appreciation and gratitude are also extended to all staff members and my colleagues at the Geology Department, Faculty of Science, Alexandria University, and to those who helped me by way of discussion and during field work.

Fig. #	Page
1. Location map of the study area	2
2. Aridity map of the Mediterranean coastal zone of Egypt. (After Shata, 1970)	3
3. Geomorphological map of the northwestern coastal zone. (Modified after Atwa, 1979)	5
4. Physiographic provinces, northwestern Mediterranean coast of Egypt. (After El Shamy, 1968)	8
5. A north-south diagrammatical section showing the different landforms of the northwestern coastal zone. (After Hammad, 1972)	19
6. Diagrammatical sketch section showing the different landforms at the Matruh-Barrani area. (After Taha, 1973)	23
7. Geological map of the northwestern Mediterranean coastal zone. (Simplified from Conoco Coral, 1986)	26
8. A Map showing the important drainage lines that dissecting the tableland at the Matruh area. (After El Shazly and Shata, 1969)	29
9. Generalized litho-stratigraphic column of the northern part of the Western Desert. (After Schlumberger, 1984)	34
10. Regional structural units of the northern part of Egypt. (After Shata and El Fayoumy, 1970)	37
11. A schematic section showing the main structural units that affecting the area between the Qattara Depression and the Mediterranean Sea. (After Shata, 1957)	37
12. General structural setting of north Egypt. (After Shata, 1955)	38
13. Mean monthly values of the main meteorological elements for the different meteorological stations along the northwestern coastal zone.	44
14. Isohyetal map for the northern part of the Western Desert for the average period of five years. (1987-1990)	46

15. Hydrographic sectors of the northwestern Mediterranean coastal zone of Egypt. (After Taha, 1973)	48
16. Physiographic map of the Fuka area. (FAO, 1970)	50
17. Physiographic map of the Bagush area. (FAO, 1970)	51
18. Physiographic map of the El Qasr area. (FAO, 1970)	52
19. Physiographic map of the Umm El Rakham area. (After El Senussi, 1968)	53
20. Piche evaporation intensity map for the northern part of the Western Desert for the period (1987-1990).	54
21. Nomogram for determining evaporation E_o from a free water surface according to Penman's formula (1948).	56
22. Drainage lines along the northwestern Mediterranean coastal zone of Egypt. (After El Shazly <i>et al.</i> , 1975)	63
23. Schematic diagram of upconing of underlying saline water to a pumped well. (U.S. EPA, 1973)	72
24. Relationship of fresh-water head and depth to salt-water interface. (Fetter, 1988)	74
25. Balance between fresh water and sea water in a coastal aquifer where the salt water is static. (Cooper <i>et al.</i> , 1964)	75
26. Circulation of the salt water from the sea to a zone of diffusion and back to the sea. (Cooper <i>et al.</i> , 1964)	77
27. Water wells and vertical electrical sounding (VES) location map of the Fuka area.	80
28. Water points and vertical electrical sounding (VES) location map of the Bagush area.	81
29. Water points and vertical electrical sounding (VES) location map of the El Qasr area.	82
30. Water points and vertical electrical sounding (VES) location map of the Umm El Rakham area.	83
31. Groundwater hydrograph for well no.1 at the Fuka area for the period between January 1994 and march 1995.	84

32. Groundwater hydrograph for well no.3 at the Fuka area for the period between January 1994 and march 1995.	84
33. Family of Boulton type curves; $W(U_{\Lambda}, r/B)$ versus $1/U_{\Lambda}$ and $W(U_Y, r/B)$ versus $1/U_Y$ for different values of r/B	87
34. Analysis of pumping test data from observation well no.1 ($r=175$ m) with the Boulton method (1963).	90
35. Analysis of pumping test data from observation well no.2 ($r=102$ m) with the Boulton method (1963).	91
36. Type curves for drawdown data from fully penetrating wells in an unconfined aquifer. (After Neuman, 1975)	93
37. Lithologic log and design of replacement well no.3 at the Fuka farm. (REGWA, 1984)	95
38. Outlines of the perched water table at the Fuka area. (Modified after Boulos and Fathi, 1984)	97
39. Water-table contour map for the Bagush area. (June 1994)	100
40. Water-table contour map for the Bagush area. (March 1995)	101
41. Water-table contour map for the El Qasr area. (June 1994)	104
42. Water-table contour map for the El Qasr area. (March 1995)	105
43. Water-table contour map for the Umm El Rakham area. (June 1994)	107
44. Water-table contour map for the Umm El Rakham area. (March 1995)	108
45. Current flow lines, equipotential lines and symmetrical Schlumberger configuration.	113
46. A map showing the sites of the vertical electrical soundings (VESs) aligned in a north-south direction at the different areas.	117
47. Various types of multi-layer profiles for ρ_a . (After Keller and Frischknecht, 1966)	119
48. Interpreted curves using Zohdy's method.	131
49. Hydrogeologically interpreted geoelectrical cross-section at the Fuka area. (June 1994).	135
