## **RECENT ADVANCES IN BURN MANAGEMENT**

**Essay**

Submitted by

**Ahmed Mohamed Mahmoud Abouzaid**

M.B.B.Ch  
Alexandria University

In partial fulfillment of Master Degree in general surgery

**Supervised By**

**Prof. Dr. Amr Abd El Monam Sherif**

Prof. of General Surgery Department,  
Faculty of Medicine,  
Ain Shams University.

**Dr. Sherif Abdel Halim Ahmed El Maghrabi**

Lecturer of General Surgery Department,  
Faculty of Medicine,  
Ain Shams University.

2014

## LIST OF CONTENTS

<b>I. Introduction.</b>	
History of Burns.....	1
Skin Anatomy and Histology.....	3
Functions of the skin.....	7
<b>II. Pathophysiology.</b>	
Pathophysiology of burn shock.....	8
▪ Hypovolemia and rapid edema formation.....	8
▪ Mechanisms of burn edema.....	10
▪ Non-burned skin.....	13
▪ Altered cellular membrane and cellular edema.....	14
▪ Mediators of burn injury.....	14
▪ Hemodynamic consequences of acute burns.....	16
Pathophysiology of burn wound.....	20
▪ Disturbed skin functions.....	20
▪ The heat required to cause skin burn.....	21
▪ Histopathology of burn wounds.....	22
<b>III. Causes and magnitude of the problem.</b>	
Etiological classification of burns.....	27
▪ Thermal burns.....	27
▪ Chemical burns.....	29
▪ Electrical burns.....	30
▪ Friction burns.....	32
▪ Laser and radiation burns.....	32
Classification according to burn depth.....	33
▪ First degree.....	33
▪ Superficial second degree.....	34
▪ Deep second degree.....	34
▪ Third degree.....	35
Epidemiology of burns.....	36

**IV. Diagnosis of burns.**

Burn depth assessment.....	38
▪ Clinical evaluation.....	39
▪ Biopsy and histology.....	40
▪ Measurement of tissue perfusion.....	42
▪ Indocyanine green video angiography.....	43
Novel techniques and future directions.....	46
▪ Optical measurement.....	46
▪ Nuclear imaging.....	47
▪ Noncontact and high-frequency ultrasound.....	48
▪ Photo-acoustic techniques.....	49
Burn size assessment.....	49

**V. Management of burns.**

Pre-hospital management.....	52
▪ Management on site.....	52
▪ Transportation.....	52
▪ Initial assessment.....	53
Inpatient management.....	61
▪ Resuscitation from burn shock.....	61
▪ Endpoints of resuscitation.....	70
▪ Oral resuscitation.....	71
▪ Failure of burn shock resuscitation.....	72
▪ Fluid replacement following burn shock resuscitation.....	73
▪ Physiologic and laboratory measurements.....	74
▪ Care for burn wound.....	78
▪ Operative wound management.....	90
▪ Excising deep burns.....	91
▪ Timing of burn wound excision.....	91
▪ Controlling blood loss.....	95
▪ General principles for burn wound excision and grafting.....	97
▪ Investigations required prior to surgery.....	98

▪ Skin grafting.....	98
▪ Essential criteria for skin grafting.....	103
▪ Donor areas.....	104
▪ Management of special types of burn.....	104

## **VI. Recent advances in management**

Alternative wound coverings.....	110
▪ Classifications of skin substitutes.....	111
▪ Synthetic skin substitutes.....	114
▪ Biologic and biosynthetic skin substitutes.....	118
Oxygen therapy for burn management.....	155
▪ Hyperbaric oxygen therapy (HBO).....	155
▪ Ozone therapy.....	160
Negative pressure therapy for burn wounds.....	164
Use of Interactive/Bioactive dressing materials.....	168
Stem cell therapy.....	174
References.....	178
Summary.....	198
Arabic Summary.	

## LIST OF FIGURES

<b>I.</b>	<b>Introduction.</b>	
1-1	Anatomy of normal skin.....	3
1-2	Layers of the Epidermis.....	5
<b>II.</b>	<b>Pathophysiology.</b>	
2-1	Landis-Starling equation.....	9
2-2	Superficial Partial-Thickness Burn.....	22
2-3	Deep Partial-Thickness Burn.....	23
2-4	Full Thickness Burn.....	23
2-5	Jackson's three zones of injury.....	24
<b>III.</b>	<b>Causes and magnitude of the problem.</b>	
3-1	Flame burn of the trunk.....	28
3-2	Scald burn of a child's face.....	28
3-3	Blast injury of the lower extremities.....	28
3-4	Chemical burn of the face.....	29
3-5	Difference between true electrical burn and flash burn.....	31
3-6	True electrical burn injury.....	31
3-7	Friction burn of the face.....	32
3-8	Laser burn in the axilla.....	33
3-9	First degree burn surrounded with hyperemia.....	33
3-10	Superficial dermal burn.....	34
3-11	Deep second degree burn in the lower limb of a child.....	35
3-12	Third degree burn of the trunk and thigh.....	35
<b>IV.</b>	<b>Diagnosis of burns.</b>	
4-1	Histological section of normal skin.....	41
4-2	Histological section of superficial dermal burn with crust formed....	41
4-3	Necrosis of full thickness epidermis and dermis.....	41
4-4	Indocyanine green video angiography.....	44
4-5	LDI-generated blood flow map.....	45
4-6	Wallace's rule of nines for adults and children.....	50

4-7	Lund and Browder chart.....	51
-----	-----------------------------	----

## **V. Management of burns.**

5-1	A schematic diagram of a hair follicle.....	79
5-2	Epidermal budding in a relatively deep second degree burn.....	79
5-3	Hand blister and way to deal with.....	80
5-4	Facial wounds treated by exposure technique and a modification on the technique.....	82
5-5	Closed dressing technique.....	84
5-6	Escharotomies for the upper limb and the hand.....	89
5-7	Escharotomies for the rest of body regions.....	89
5-8	Escharotomy for the lower limb.....	90
5-9	Escharotomy for the trunk with homeostasis.....	90
5-10	Graft harvesting knives, manual and electrical.....	93
5-11	Fascial excision of a burn.....	94
5-12	Schematic representation of tangential excision.....	94
5-13	Manoeuvre of tangential excision of a burn wound.....	94
5-14	Skin grafts harvesting according to thickness.....	101
5-15	Sheet graft.....	101
5-16	Pinch graft.....	102
5-17	Full thickness skin graft (FTSG) harvesting and application.....	102

## **VI. Recent advances in management**

6-1	Use of Suprathel on a partial thickness burn.....	116
6-2	Use of xenograft on burned back.....	119
6-3	Use of Biobrane on hand burn.....	121
6-4	Methods of application of Biobrane and the Biobrane glove.....	122
6-5	Dry collagen sheet.....	123
6-6	Use of collagen on burned child.....	124
6-7	Integra.....	125
6-8	Integra application on a facial burn.....	126
6-9	Use of Integra with V.A.C.....	128
6-10	Use of Alloderm in burn scar incisions resurfacing.....	131
6-11	Dermagraft.....	132

6-12	Epicel cultured epidermal autografts.....	134
6-13	Cultured keratinocytes.....	135
6-14	Use of cultured keratinocytes on burned forehead.....	135
6-15	Platelets and its activation.....	139
6-16	Schematic representation of intracellular events during platelet activation.....	140
6-17	Peeling of amniotic membrane from placenta.....	146
6-18	Amniotic membrane prior to use.....	146
6-19	Use of Amniotic membrane on burn wound.....	147
6-20	Diagrammatic illustration of meshed allograft overlay technique.....	148
6-21	Allograft on burned child.....	148
6-22	Recell harvesting kit.....	149
6-23	Use of Recell technique on hand burn.....	152
6-24	Use of Recell in scar modulation.....	153
6-25	Monoplace hyperbaric oxygen chamber.....	156
6-26	Multiplace hyperbaric oxygen chamber from outside.....	156
6-27	Multiplace hyperbaric oxygen chamber from inside.....	157
6-28	HBOT on deep partial thickness to full thickness burn.....	159
6-29	HBOT on face burn.....	160
6-30	Ozone generator.....	163
6-31	Different methods of treatment with Ozone.....	163
6-32	V.A.C device.....	166
6-33	Application of V.A.C on burned hand.....	167
6-34	Results of V.A.C use on the burned hand.....	167

## LIST OF TABLES

### **II. Pathophysiology**

2-1	Cardiovascular and Inflammatory Mediators of Burn Shock.....	15
2-2	Pathophysiological effect of major burn shock.....	19

### **V. Management of burns**

5-1	Burn depth estimation. ....	57
5-2	American Burn Association's grading system for burn severity and patient disposition.....	59
5-3	Burn resuscitation formulas, current and past.....	68
5-4	Formulas for estimating pediatric resuscitation needs.....	70
5-5	The content of various solutions used for oral resuscitation.....	72

### **VI. Recent advances in management**

6-1	First-line interactive/bioactive dressings.....	169
-----	---	-----

## LIST OF ABBREVIATIONS

TBSA	Total Body Surface Area.
CO	Cardiac Output.
SIRS	Systemic Inflammatory Response Syndrome.
SVR	Systemic Vascular Resistance.
PVR	Pulmonary Vascular Resistance.
GIT	Gastro-Intestinal Tract.
ACS	Abdominal Compartment Syndrome.
IAH	Intra-Abdominal Hypertension.
RBF	Renal Blood Flow.
GFR	Glomerular Filtration Rate.
ICP	Intra-Cranial Pressure.
FRC	Functional Residual Capacity.
BPP	Boiled Potato Peel.
ICG	Indo-Cyanine Green.
LDPM	Laser Doppler Perfusion Monitoring.
LDI	Laser Doppler Imaging.
LDPI	Laser Doppler Perfusion Imaging.
MIBI	Methoxy-Iso-Butyl-Isonitrile.
Tc	Technetium.
ABA	American Burn Association.
BUN	Blood Urea Nitrogen.
LR	Lactated Ringer.
HLS	Hypertonic Lactated Saline.
D <sub>5</sub> W	5 percent dextrose in water.
PALS	Pediatric Advanced Life Support.
CVP	Central Venous Pressure.
PAC	Pulmonary Artery Catheter.
PT	Prothrombin Time.
PTT	Partial Thromboplastin Time.
DIC	Disseminated Intravascular Coagulation.

MEBO	Moist Exposed Burn Ointment.
SSD	Sliver-Sulpha-Diazine.
CK	Creatinine Kinase.
LDH	Lactated De-Hydrogenase.
SGPT	Serum Glutamic-Pyruvic Transaminase.
CPK	Creatinine Phospho-Kinase.
CK-MB	Creatine Kinase Myocardial Band.
SSG	Split-thickness Skin Graft.
FSG	Full-thickness Skin Graft.
ABG	Arterial Blood Gases.
ARS	Acute Radiation Syndrome.
CEA	Cultured Epithelial Autografts.
CSS	Cultured Skin Substitutes.
ECM	Extra-Cellular Matrix.
BDS	Bilayer-Dermal Substitute.
VAC	Vacuum Assisted Closure.
ADM	Acelluar Dermal Matrix.
AIDS	Acquired Immune-Deficiency Syndrome.
PRP	Platelet Rich Plasma.
GFs	Growth Factors.
EGF	Epidermal Growth Factor.
PDGF	Platelet Derived Growth Factors.
TGF	Transforming Growth Factor.
KGF	Keratinocyte Growth Factor.
FGF	Fibroblast Growth Factor.
VEGF	Vascular Endothelial Growth Factor.
CTGF	Connective Tissue Growth Factor.
GM-CSF	Granulocyte/Macrophage Colony-Stimulating Factor.
IGF	Insulin-like Growth Factor.
TNF	Tumour Necrosis Factor.
IL	Inter-Leukin.
PG	Prosta-Glandin.

PDRNs	Poly-Deoxy-Ribo-Nucleotides.
COX	Cyclooxygenase.
NO	Nitric Oxide.
NADPH	Nicotinamide Adenine Dinucleotide Phosphate.
HLA	Human Leucocytic Antigine.
HBO/ HBOT	Hyperbaric oxygen therapy.
SAP	Sub-Atmospheric Pressure.
NPWT	Negative Pressure Wound Therapy.
DD	Degree of Deacetylation.
PVA	Poly-Vinyl Alcohol.
iPSCs	Induced Pluripotent Stem Cells.
SC	Stem Cells.
ESC	Embryonic Stem Cells.
ASC	Adult Stem Cells.
HSCs	Hematopoietic Stem Cells.
BMSCS	Bone Marrow-Derived Stem Cells.
ADSCS	Adipose Tissue-Derived Stem Cells.
MSCs	Mesenchymal Stem Cells.

# *Acknowledgement*

*Praise to "Allah", the most gracious, most merciful and compassionate for blessings given to us, without which, nothing can stand complete and guides us to the right way.*

*I would like to express my deepest appreciation and endless gratitude to **Professor Dr. Amr Abd El Monam Sherif** , Professor of General Surgery Department, Faculty of Medicine, University of Ain Shams, for giving me the privilege of working and for his valuable supervision, instructions and encouragement through the whole work,*

*I owe a special depth of thanks to **Dr. Sherif Abdel Halim Ahmed El Maghrabi** lecturer in general Surgery Department, Faculty of Medicine, University of Ain Shams, for his endless help and support through this study and kindness to review each step in this work. He liberally gave me of his time, patience and experience.*

*I am also delighted to express my deepest gratitude and cordial thanks to my beloved wife **Arch. Nourhan** with our lovely son Yamen, father, mother, brother and best friends **Dr. Mohammed Soffar & Dr. Abdul-Fattah Nasr** whom without their continuous encouragement, support and hand to hand help I could not have finished this work,*

*My great appreciation is extended to all those who shared either practically or morally in the accomplishment of this work,*

**THANKS TO ALL**

*Ahmed M. Abougaid....*

## I. Introduction

**Burn trauma** is as old as the discovery of fire in the history of mankind and medicine is built on the best of the past.

A **burn** is a type of injury (coagulative necrosis) caused by heat, electricity, chemicals, light, radiation or friction to skin and deep tissues.

Burn injuries represent one of the most important public health problems faced by both developing as well as industrialized nations today, it's also an extremely stressful experience for both the victims as well as their families physically, psychic and financially.

Study of 'history of burns' contributes to a review of accomplishments and errors, it teaches us where we started from, where we stand today, in what direction we are marching and guides us for the future, in an address to the Royal College of Surgeons, Churchill remarked; "The longer you look back, the further you can look forward".<sup>(1)</sup>

### History of Burns:

In considering the history of the treatment of burn injuries **in the ancient ages**, Hippocrates (430 BC) used swine's semen, resin, bitumen and Oak bark solutions in the treatment of burns.

Chinese (600-500 BC) used extracts of tea leaves.

Smith papyrus (1500 BC Egyptians) used gum and goat's milk mixed with mother's milk and strips soaked in oil.

Celsius (ancient Rome) advocated honey and bran.

Galen (ancient Rome) described vinegar or wine in treatment of burns.<sup>(2)</sup>

**In the middle ages** Clowes (1596) wrote on gun powder burns, and described multiple types of therapy on different body parts and also suggested oily dressings containing many drugs.

Fabricus Hildanus (1610) was the first to classify burns into three categories and also showed pictorially the early successful surgical release of hand contractures.

H Earle (1799) described the use of ice and iced water for analgesia and the prevention of edema.

Lisfranc (1835) described calcium chloride dressings.<sup>(2)</sup>

However **in the modern ages** of burns history Cotton dressings were first discussed in a Glasgow medical journal (1928).

By (1930) the understanding of burn pathology took a great leap forward when Underhill studied a group of patients and analyzed content of blister fluid and determined that burn shock was due to fluid loss and not due to toxins.

Since 1942 extensive studies by Cope and Moore was done for treating burn shock.

Dressings remained popular until Wallace advocated exposure for face, buttock and perineum (1949).

Formulas gradually evolved calculating fluid losses, Evans (1952) used burn surface area and weight as the principle variable, Moyer *et al* introduced first crystalloid only resuscitation (1965), Brooke formula was a modification of Evans formula and utilized salt, colloid and water.<sup>(3)</sup>

In the early 1970's Charles Baxter developed the Parkland formula which determined that patients required 4 ml/kg/%TBSA burns in the first 24 hours and it is most frequently used today.<sup>(4)</sup>

Also in the early 1970's Monafu started examining the efficacy of using a hypertonic saline solution for resuscitation and the concept was that it would shift fluid from intracellular to intravascular space, by 1990's Warden suggested the use of modified hypertonic resuscitation using LR solution.<sup>(4)</sup>

Today tremendous advances have been made in the management of burn injury in the past twenty five years. Mortality and morbidity have been markedly reduced due to overall major improvements in critical care, metabolic support, infection control, fluid resuscitation strategies and wound management.<sup>(5)</sup>

## Skin Anatomy and Histology:

Understanding a burn injury requires recognition of anatomy and physiology of the skin. <sup>(6)</sup>

Skin is the largest organ, covering a surface area of 1.5 to 2.0 m<sup>2</sup> in an adult;<sup>(7)</sup> it's a bilayer organ with many protective functions essential for survival (Figure 1.1)<sup>(6)</sup>

**Figure 1.1 Anatomy of normal skin.** <sup>(6)</sup>

Skin consists of thin outer layer ectodermal in origin “the Epidermis” and a thick fibrous inner layer mesodermal in origin “the Dermis”, the two layers are separated by a basement membrane or basal lamina. <sup>(7)</sup>
