

OSTEOPONTIN IN PATIENTS WITH ENDOMETRIAL CANCER

Thesis

Submitted for partial fulfillment of M. Sc. Degree in
Obstetrics & Gynecology

BY

Neveen Mohamed Abd El Aal El Mamlouk
M.B.B.Ch (1998)

Under Supervision of

Professor. Amr Hassan El Shalakany
Professor of Obstetrics & Gynecology
Faculty of Medicine – Ain Shams University

Dr. Abd El Megeed Ismaeel Abd El Megeed
Asst. Professor of Obstetrics & Gynecology
Faculty of Medicine – Ain Shams University

Professor. Moustafa Mohamed El Rasad
Professor of Biochemistry
Faculty of Medicine – Ain Shams University

Faculty of Medicine – Ain Shams University
2006

(قالوا سبحانك لا علم لنا إلا ما علمتنا
أنت أنت العليم الحكيم)

صدق الله العظيم

Acknowledgment

At first and foremost thanks to “Allah” who gave me the power to finish this work.

I find no words by which I can express my deepest thanks and profound respect to my honored professor, **Prof. Dr. Amro Hassan El Shalakany** , Professor of Obstetrics and Gynecology, Faculty of Medicine, Ain Shams University for the continuous kind encouragement, guidance and support he gave me throughout the whole work. It has been an honor and a privilege to work under his generous supervision.

I owe special gratefulness to **Dr. Abd El Megeed Ismaeel Abd El Megeed**, Assistant Professor of Obstet and Gynaecol, Faculty of Medicine, Ain Shams University, who supported, encouraged, and directed my efforts throughout this work.

Also, I would like to express my deepest thanks and appreciation to **Prof. Moustafa Mohamed El Rasad**, professor of Biochemistry, Faculty of Medicine, Ain Shams University, for his generosity, kindness and humanity are unique and everlasting.

DEDICATION

This piece of work is dedicated
To my parents and
My dear husband

List of abbreviations

ACS	:	American cancer society
BMI	:	Body mass index
CA125	:	Cancer antigen 125
CCC	:	Clear cell carcinoma
CDC	:	Centers for disease control
CI	:	Confidence interval
CT	:	Computed tomography
D&C	:	Dilatation &curettage
EBM	:	Evidence based medicine
ECM	:	Extracellular matrix
ECPI	:	Endometrial carcinoma prognostic index
EE	:	Endometrial epithelium
EEC	:	Endometrioid endometrial carcinoma
ELISA	:	Enzyme linked immunosorbent assay
ERT	:	Estrogen replacement therapy
FIGO	:	International federation of gynaecology and obstetrics
FN	:	Standard for false negative cases

List of abbreviations (cont.)

FSH	:	Follicle-stimulating hormone
GIN	:	Glandular intraepithelial neoplasia
GOG	:	Gynaecologic oncology group
GTD	:	Gestational trophoblastic disease
HNPCC	:	Hereditary non-polyposis colorectal cancer
HPV	:	Human papilloma virus
HR	:	Hazard ratio
HRT	:	Hormonal replacement therapy
ISGP	:	International society of gynaecological pathologists
IUCD	:	Intrauterine contraceptive device
LH	:	Luetinizing hormone
LSD	:	Least significant difference
MDD	:	Minimum detectable dose
MRI	:	Magnetic resonance imaging
NCI	:	National cancer institute
NEEC	:	Non-endometrioid endometrial carcinoma
OCPs	:	Oral contraceptive pills

List of abbreviations (cont.)

OPN	:	Osteopontin
OS	:	Overall survival
PCOS	:	Polycystic ovarian syndrome
PFS	:	Progression free survival
PMB	:	Postmenopausal bleeding
QOL	:	Quality of life
RCTs	:	Randomized controlled trials
ROC	:	Receiver operating characteristic
RR	:	Relative risk
RT-PCR:		Reverse transcription polymerase chain reaction
SEER	:	Survillance , Epidemiology , and End Results
SHBG	:	Sex hormon-bound globulin
SPP1	:	Secreted phosphoprotein 1
TN	:	Standard for true negative cases
TP	:	Standard for true positive cases
TVS	:	Transvaginal scanning

List of abbreviations (cont.)

UPSC : Uterine papillary serous carcinoma

WHO : World health organization

(16)	ROC curve for plasma OPN in diagnosis malignant endometrial tumour	131

Introduction and Aim of the Work

Introduction

Endometrial cancer is the most common gynecologic malignancy & the 4th most common cancer in women in U.S.A and the 8th most common malignant neoplasm world wide. Incidence ranges from 5.9 per 100.000 in China, to 44 per 100.000 in U.S.A (**Randall and Trimble 1999**).

The etiology of endometrial cancer is hypothesized to be a hormone mediated process, through long standing stimulation of endometrium by unopposed estrogen. (**Randall and Trimble, 1999**).

Seventy percent of cases are presented early (stage I) and of good prognosis while 30% of cases present late (stage IV) and of bad prognosis (**Randall and Trimble, 1999**).

The key stone for diagnosis of endometrial cancer in women with post menopausal bleeding is endometrial biopsy through fractional uterine curettage or office hysteroscopy. This is followed by surgical staging according to 1988 FIGO criteria to determine the extent of the disease hence of surgery and the selection of any adjuvant treatments. (**Randall and Trimble, 1999**).

So there is still a place for diagnostic and prognostic markers to search for to help us for early detection and hence good prognosis of endometrial cancer. (**Randall and Trimble, 1999**).

Of these potential markers suggested a single-chain polypeptide sialoprotein called osteopontin (OPN) with a molecular weight of approximately 32,600 Dalton. It is glycosylated, highly phosphorylated and sulphated (**Chang and Prince, 1991**).

OPN is an acidic protein which exhibits a high amino acid homology between species (mouse, rat, human and pig) (**Prince et al., 1987**).

Osteopontin was originally identified in the mineralized matrix of bovine bone (**Franzen and Heinegard, 1985**) but has subsequently been reported in a variety of human organs, including female reproductive tissues such as the ovary
