

**Study of Thyroid Auto-Antibodies
in Patients with Allergic Bronchial
Asthma and Allergic Rhinitis**

Thesis

*Submitted For Partial Fulfillment of Master Degree
In Internal Medicine*

By

Amira Ahmed Mohammed Mandour

M.B.B.ch. in

Misr University for Science and Technology

Under Supervision By

Prof. Dr. Mohmmmed Fahmy Abd El-Aziz

Professor of Internal Medicine & Endocrinology

Faculty of Medicine - Ain Shams University

Prof.Dr. Maged Mohammed Refaat

Professor of Internal Medicine & Clinical Immunology

Faculty of Medicine - Ain Shams University

Dr. Inas Mohammed Sabry

Lecturer of Internal Medicine & Endocrinology

Faculty of Medicine - Ain Shams University

**Faculty of Medicine
Ain Shams University**

2008

Acknowledgment

*I would like to thank **Prof. Dr. Mohammed Fahmy Abd El-Aziz**, Professor of Internal medicine and Endocrinology, Head Endocrine Unit, Faculty of Medicine, Ain Shams University for his continuous support, guidance and help in the present work.*

*I am very grateful to Prof. **Dr. Maged Mohammed Refaat**, Professor of Internal Medicine and Clinical Immunology, Faculty of Medicine, Ain Shams University for his continuous assistance and advice during the course of this study*

*My grateful acknowledgement is expressed to **Dr. Inas Mohammed Sabry**, Lecturer of Internal Medicine and Endocrinology, Faculty of Medicine, Ain Shams University for her support and encouragement.*

*I would like to thank Prof. **Dr. Mohammed Yousef**, Professor of Clinical Pathology, Faculty of Medicine, Ain Shams University for his valuable help during this study.*

*I would like to thank **Dr. Hadeya El Sayed Abd El Fatah**, Assistant professor in Internal Medicine and Lecturer of Internal Medicine and Endocrinology, Faculty of Medicine, Ain Shams University for her support Endocrinology Departement, Ain Shams University for her support.*

*I do not forget the help offered by **my colleagues in E.N.T** Departement, Faculty of Medicine, Ain Sham University.*

LIST OF ABBREVIATIONS

AMC	Antibody mediated cytotoxicity
AHT	Autoimmune hypothyroidism
AITD	Autoimmune thyroid disease
APC	Antigen-presenting cell
AR	Allergic rhinitis
cAMP	Cyclic adenosine mono phosphate
CTLA	Cytotoxic T-lymphocyte-associated antigen
CL Ts	Cysteinyl leukotrienes
DZ	Dizygotic
ECP	Eosinophilic cationic protein
ELISA	Enzym linked immunosorbant assay
EPR	Early-phase responses
FT3	Free triiodothyronin
FT4	Free thyroxin
GD	Graves' disease
H	Histamine
HT	Hashimoto's thyroiditids
IFN-γ	Interferon- γ
IgE	Immunoglobulin E
IL-4	Interleukin-4
LPR	Late-phase responses
LT	Leukotrienes
MBP	Major basic protein

LIST OF ABBREVIATIONS (CONT.)

MHC	Major histocompatibility complex
MZ	Monozygotic
NIS	Na [±] /I-symporter
PAP	Perennial Allergic Rhinitis
PEFR	Peak expiratory flow rate
PEV₁	Peak expiratory volume
PG	Prostaglandins
PTPN22	Protein tyrosine phosphatase non-receptor 22
SAR	Seasonal Allergic Rhinitis
SNPs	Single nucleotide polymorphisms
SPSS	Statistical program for social science version 12
T3	Thyroid hormones triiodothyronine
TG	Thyroglobulin
TH	T helper
TNF-α	Tumor necrosis factor
TPO	Thyroid peroxidase
TSAbs	Thyroid stimulating antibodies
TSH	Thyroid stimulating hormone
TSH-R	Thyroid stimulating hormone receptor
V	Variable
VCAM	Vascular cell adhesion molecule

List of Tables

	<u>Page</u>
1. Comparison between the studied groups as regard general data	84
2. Comparison between BA versus AR as regard total IgE and thyroid profile.....	85
3. Comparison between BA versus controls as regard total IgE and thyroid profile.....	86
4. Comparison between AR versus controls as regard total IgE and thyroid profile.....	87
5. Comparison between BA versus AR as regard esinophilia	88
6. Comparison between BA versus AR as regard skin test	89
7. Comparison between BA versus AR as regard anti-thyroglobulin and Anti-thyroidperoxidase antibodies	89
8. Comparison between BA versus controls as regard anti-thyroglobulin and Anti-thyroidperoxidase antibodies	90
9. Comparison between AR versus controls as regard anti-thyroglobulin and Anti-thyroidperoxidase antibodies	91
10. Correlation between Anti-thyroglobulin antibodies versus other variables among BA group	92

List of Tables (Cont.)

	<u>Page</u>
11. Correlation between Anti-thyroglobulin antibodies versus other variables among AR group	93
12. Correlation between Anti-thyroglobulin antibodies versus other variables among control group	95
13. Correlation between anti-thyroidperoxidase antibodies versus other variables among BA group	97
14. Correlation between Anti-thyroidperoxidase antibodies versus other variables among AR group	98
15. Correlation between Anti-thyroidperoxidase antibodies versus other variables among control group	100
16. Comparison between male and female as regard thyroid autoantibodies in BA group	101
17. Comparison between male and female as regard thyroid autoantibodies in AR group	102
18. Comparison between male and female as regard thyroid autoantibodies in control group.....	103

List of Figures

	<u>Page</u>
1. Mechanism of allergic rhinitis	26
2. Comparison between BA ,AR and control groups as regard thyroid profile	85
3. Comparison between BA versus AR as regard esinoiphilia	88
4. Correlation between Anti-TG and Anti-TPO among AR group.....	94
5. Correlation between Anti-TG and IgE among AR group	96
6. Correlation between Anti-TPO versus IgE among AR	99

INTRODUCTION

Allergic disorders are diseases where the immune system reacts inappropriately to exogenous antigens, whereas in autoimmune diseases, reactions are directed against auto-antigens, resulting in different kinds of diseases depending on which organ is affected. The auto-antibodies in allergic patients, react against exogenous antigens may also react more readily to endogenous antigens (*Lindberg et al., 1998*)

The prevalence of allergic disease is increasing all over the world, but its influence on the clinical course of autoimmune disease is unknown (*Takeoka et al., 2003*). Little is known about relation between thyroid disease and allergic diseases *Jenkins and Weetman, (2002)*. *Izum and Coworkers (1998)* reported that auto immunity in patients with allergic rhinitis have increased frequency of Grave's disease. Moreover, it has recently been clarified that the association of seasonal allergic rhinitis was frequent in Grave's disease and rare in painless thyroiditis (*Amino et al., 2003*). However, little is known about the influence of allergic rhinitis and the clinical course of autoimmune disease and production of autoantibodies (*Takeoka and colleagues, 2003*). *Takeoka and coworkers (2003)* Concluded that seasonal allergic rhinitis aggravated the clinical course of Grave's disease and induce an

increase in serum antithyroid autoantibody concentration as well as an increase in pollen-specific IGE concentration. *Hidaka and co-workers (1996)* observed that Grave's thyrotoxicosis frequently relapsed or was aggravated after attacks of seasonal allergic rhinitis. *Lindberg and Coworkers (1998)* found higher thyroid peroxidase antibodies in children with allergic asthma.

Knowledge of the presence of thyroid disease in patients with bronchial asthma is of importance since hypothyroidism may ameliorate coexistent asthma, whereas hyperthyroidism has been reported to have opposite effect (*Rowe, 1991*). This finding may be useful to alert clinician that thyroid disease may be super imposed on allergic diseases (*Lindberg et al., 1998*).

AIM OF THE WORK

The aim of this work is to study the co-existence of thyroid auto-antibodies in patients with bronchial asthma and allergic rhinitis.

BRONCHIAL ASTHMA

I – Definition:

Asthma is a disorder defined by its clinical, physiological, and pathological characteristics. The predominant feature of the clinical history is episodic shortness of breath, particularly at night, often accompanied by cough. Asthma is a chronic inflammatory disorder of the airways in which many cells and cellular elements play a role (*Cohn et al., 2004*).

The chronic inflammation causes increasing in airway hyper responsiveness that leads to recurrent episodes of wheezing, shortening of breath, and coughing, particularly at night or the early morning (*Black, 2004*).

These episodes may be triggered by such things as exposure to an environmental stimulant (allergen) – cold air – exercise or exertion or emotional stress, are usually associated with widespread but variable airflow obstruction that is often reversible either spontaneously or with treatment (*Vincent et al., 2006*).

II – Classification:

A. Classification of asthma severity by clinical features before treatment according to Gian (2006) and Egyptian society of chest diseases and tuberculosis:

⊙ *Step (1): Intermittent:*

- Symptoms less than once a week.
- Brief exacerbations.
- Nocturnal symptoms not more than twice a month:
 - FEV1 or PEF \geq 80% predicted.
 - PEF or FEV1 variability $<20\%$.

⊙ *Step (2): Mild persistent:*

- Symptoms more than once a week but less than once a day.
- Exacerbations may affect activity and sleep.
- Nocturnal symptoms more than twice a month:
 - FEV1 or PEF \geq 80% predicted.
 - PEF or FEV1 variability $<20-30\%$.

⊙ *Step (3): Moderate persistent:*

- Symptoms daily.
- Exacerbations may affect activity and sleep.

- Nocturnal symptoms more than once a week.
 - Daily use of inhaled short-acting B₂-agonist:
 - FEV1 or PEF 60-80% predicted.
 - PEF or FEV1 variability > 30%.
 - ⊙ *Step (4): Severe persistent:*
 - Symptoms daily (wheezing, dyspnea, tachypnea and indrawing of tissues and muscles between the ribs).
 - Frequent exacerbations.
 - Frequent nocturnal asthma symptoms.
 - Limitation of physical activities:
 - FEV1 or PEF Φ 60% predicted.
 - PEF or FEV1 variability > 30%.
- (Tarlo and Liss, 2003)*

B. Classification according to special types:

- ⊙ Occupational asthma.
- ⊙ Aspirin induced asthma.
- ⊙ Cough variant asthma.
- ⊙ Exercise-induced asthma.

III – Risk factors:

A. Exposures to (Environmental factors):

Many allergens are soluble proteins that function in their natural states as enzymes e.g. proteolysis.
