

# **PHYSIOLOGICAL AND BIOCHEMICAL STUDIES ON *MORINGA* SPECIES IN EGYPT**

## **A THESIS**

**Submitted for the degree of Master of Science as a Partial  
Fulfillment for requirements of the Master of Science**

**Botany (Plant Physiology)**

**By  
Heba Mohamed El- Saied Faramawy**

**M. Sc. In Science (Botany)  
(2008)**

**Ain Shams University  
Faculty of Science  
Botany Department  
(2016)**

# **PHYSIOLOGICAL AND BIOCHEMICAL STUDIES ON *MORINGA* SPECIES IN EGYPT**

## **A THESIS**

**Submitted for the degree of Master of Science as a Partial  
Fulfillment for requirements of the Master of Science  
Botany (Plant Physiology)**

**By  
Heba Mohammed El- Saied Faramawy  
B. Sc. In Science (Botany)  
(2008)**

## **Supervisors**

**Prof. Dr. Raifa Ahmed Hassanein**  
Prof. of Plant Physiology

Faculty of Science  
Ain-Shams University

**Dr. Amal Fadel Abd El-Kader**  
Assist. Prof. of Plant Physiology

Faculty of Science  
Ain-Shams University

**Ain Shams University  
Faculty of Science  
Botany Department  
(2016)**

## **Approval Sheet**

### **Title of Thesis:**

Physiological and Biochemical Studies on *Moringa* Species in  
Egypt

### **Degree:**

**Master of Science in Botany (Physiology)**

### **Name of Student:**

Heba Mohammed El- Saied Faramawy

### **This Thesis has been approved by:**

1- Prof. Dr

2- Prof. Dr.

2- Prof. Dr.

**Prof. Dr. Maher Ahmed Shehata**  
**Head Department of Botany**

## **M.Sc. Thesis**

**Name:** Heba Mohamed El- Saied Faramawy

**Title:** "Physiological and Biochemical Studies on *Moringa* Species in Egypt"

**Degree:** Master of Science (Botany, Physiology)

**Supervisors:**

**Prof. Dr. Raifa Ahmed Hassanein**

Prof. of Plant Physiology

Botany Department, Faculty of Science

Ain-Shams University

**Dr. Amal Fadi Abd El-Kader**

Assist. Prof. of Plant Physiology

Botany Department, Faculty of Science

Ain-Shams University

**Prof. Dr. Maher Mohamed Shehata**

Head of Botany Department

Faculty of Science

## **Declaration**

These thesis is the original work of the author and does not done previously at this degree or any other university. It was valuable and beneficial for me and I wish to be useful for other authors and researchers.

***Heba Mohamed Faramawy***

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قَالُوا سُبْحَانَكَ لَا عِلْمَ لَنَا إِلَّا مَا  
عَلَّمْتَنَا إِنَّكَ أَنْتَ الْعَلِيمُ الْحَكِيمُ

“صدق الله العظيم”  
(البقرة آية 32)

# ***ACKNOWLEDGMENT***

***Firstly and Finally Thanks to Allah for helping me to finish this work.***

*I would like to express my special thanks and gratitude to **Prof. Dr. Raifa A. Hassanein**, Professor of Plant Physiology, Botany Department, Faculty of Science, Ain Shams University, For suggesting the point of research, supervision, continuous help, encouragement support, following up throughout the work.*

*Thanks are also to **Prof. Dr. Amal F. Abd El-Kader**, Assistant Professor of Plant Physiology, Botany Department, Faculty of Science, Ain Shams University, for his encouragement.*

*Special thanks for **Prof. Dr. Maher Shehata**, Head of Botany Department, Faculty of Science, Ain Shams University, for his encouragement and valuable help.*

*My thanks are also to all staff members in Botany Department, Faculty of Science, Ain Shams University.*

*My thanks to **Dr. Nesma Maher** Professor of Plant Physiology for their help and support throughout my work.*

*Special appreciation to **Dr. Hend Kamel** assistant Professor of Plant Ecology For help in Statistical Analysis*

*Special appreciation and sincere gratefulness is extended to my parents , my sisters, my brothers, my lovely husband and his continuous spiritual support, encouragement, sympathy, love and my sweet sons for their patience.*

## LIST OF TABLES

Table number	Table title	Page number
1	Biochemical composition of fully expanded leaves of <i>Moringa oleifera</i> and <i>Moringa peregrina</i> plants	74
2	Phenolic compounds of leaves of <i>Moringa oleifera</i> and <i>Moringa peregrina</i> plants	76
3	Protein banding pattern of <i>Moringa oleifera</i> and <i>Moringa peregrina</i> leaves (molecular weight; Mw and amounts)	78
4	<p>Effect of <i>Moringa oleifera</i> leaf extract (OLE) and <i>Moringa peregrina</i> leaf extract (PLE) on the growth parameters of sweet basil (<i>Ocimum basilicum</i> L.) plant grown under normal condition and/or salinity (S) stress. Each value is the mean of three variables.</p> <p>a) Shoot length</p> <p>b) Number of branches</p> <p>c) Shoot Fresh and Dry Weights</p> <p>d) Area of Leaves (cm<sup>2</sup>)</p> <p>e) Root Length (cm)</p> <p>f) Root Fresh and Dry Weights (g/plant)</p>	<p>84</p> <p>87</p> <p>90</p> <p>93</p> <p>96</p> <p>100</p>
5	Effect of <i>Moringa oleifera</i> leaf extract (OLE) and <i>Moringa peregrina</i> leaf extract (PLE) on photosynthetic pigments & anthocyanin content of leaves of sweet basil ( <i>Ocimum basilicum</i> ) plant grown under normal and salinity stress. Each value is the mean of three variables.	103

<b>6</b>	Effect of <i>Moringa oleifera</i> leaf extract (OLE) and <i>Moringa peregrina</i> leaf extract (PLE) on carbohydrate content (g/100g DW) of leaves sweet basil ( <i>Ocimum basilicum</i> ) plant grown under normal and salinity stress. Each value is the mean of three variables.	<b>108</b>
<b>7</b>	Effect of <i>Moringa oleifera</i> leaf extract (OLE) and of <i>Moringa peregrine</i> leaf extract (PLE) on proline content (mg/g DW) of leaves and roots of sweet basil ( <i>Ocimum basilicum</i> ) plant grown under normal and salinity stress. Each value is the mean of three variables.	<b>111</b>
<b>8</b>	Effect of <i>Moringa oleifera</i> leaf extract (OLE) and <i>Moringa peregrina</i> leaf extract (PLE) on lipid peroxidation (MDA) content (mM/100g FW) of leaves and roots of sweet basil ( <i>Ocimum basilicum</i> ) plant grown under normal and salinity stress. Each value is the mean of three variables.	<b>113</b>
<b>9</b>	<p>Effect of <i>Moringa oleifera</i> leaf extract (OLE) and <i>Moringa peregrina</i> leaf extract (PLE) on the activity of some antioxidant enzymes in leaves and roots of sweet basil (<i>Ocimum basilicum</i>) plant grown under normal and salinity stress condition. Each value is the mean of three variables.</p> <p>a) Superoxide dismutase (SOD) activity (unit/g Fw)</p> <p>b) Catalase Activity (CAT) (<math>\mu\text{M H}_2\text{O}_2</math> destroyed/g FW)</p> <p>c) Peroxidase activity (POX)</p> <p>d) Ascorbate peroxidase (APX) activity</p> <p>e) Poly phenole oxidase (ppo) activity</p> <p>f) Ascorbic acid oxidase (ASO) activity</p>	<p><b>118</b></p> <p><b>120</b></p> <p><b>122</b></p> <p><b>124</b></p> <p><b>126</b></p> <p><b>128</b></p>

<b>10</b>	Biochemical composition of fully matured seeds of <i>Moringa oleifera</i> and <i>Moringa peregrina</i> plants	<b>132</b>
<b>11</b>	Phenolic compounds of seeds of <i>Moringa oleifera</i> and <i>Moringa peregrina</i> plants	<b>134</b>
<b>12</b>	Protein banding pattern of <i>Moringa oleifera</i> and <i>Moringa peregrina</i> seeds (molecular weight; MWt and amounts)	<b>135</b>
<b>13</b>	Effect of soil application of defatted <i>Moringa oleifera</i> (OS) and <i>Moringa peregrina</i> (PS) seeds on growth parameter of 35 day old seedlings of wheat ( <i>Triticum aestivum</i> ) grown under Cd-acetate stress. Each value is the mean of three variables. A) Shoot Length (cm) B) Shoot Fresh and Dry Weights (mg/plant) C) Root Length (cm) D) Root Fresh and Dry Weights (mg/plant)	<b>140</b> <b>144</b> <b>146</b> <b>148</b>
<b>14</b>	Effect of soil application of defatted <i>Moringa oleifera</i> (OS) and <i>Moringa peregrina</i> (PS) seeds on percentage of relative water content (% RWC) of leaves of 35 day old seedlings of wheat ( <i>Triticum aestivum</i> ) grown under Cd-acetate stress. Each value is the mean of three variables.	<b>152</b>
<b>15</b>	Effect of soil application of defatted <i>Moringa oleifera</i> (OS) and <i>Moringa peregrina</i> (PS) seeds powder on photosynthetic pigments content of leaves ( $\mu\text{g g}^{-1}$ FW) of 30 day old seedlings of wheat ( <i>Triticum aestivum</i> ) grown under Cd- stress. Each value is the mean of three variables.	<b>155</b>

<b>16</b>	Effect of soil treatment of defatted <i>Moringa oleifera</i> seed powder (OS) and <i>Moringa peregrina</i> seed powder (PS) on Cd content of shoots and roots of 35 day old seedlings of wheat ( <i>Triticum aestivum</i> ) grown under Cd <sup>2+</sup> stress. Each value is the mean of three variables.	<b>158</b>
<b>17</b>	Protein banding pattern of leaves of wheat plant ( <i>Triticum aestivum</i> ) treated with cadmium alone or in combination with defatted seed powder of <i>Moringa oleifera</i> (OS) or <i>Moringa peregrina</i> (PS), (MWt & amount).	<b>161</b>
