MOLECULAR AND SEROLOGIC DIAGNOSIS OF DENGUE VIRUS.

Thesis

*Submitted in partial Fulfillment for the Degree of
Ph. D. Microbiology*

By

Eiman Ahmad Salama Elbishbishi

**Womens's College
Department of Botany and Microbiology
Ein- Shams University.**

2000

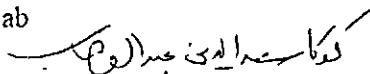

The first part of the paper discusses the importance of the study of the history of the United States. It is argued that the study of the history of the United States is essential for a full understanding of the country and its people. The second part of the paper discusses the importance of the study of the history of the world. It is argued that the study of the history of the world is essential for a full understanding of the world and its people. The third part of the paper discusses the importance of the study of the history of the United States and the world. It is argued that the study of the history of the United States and the world is essential for a full understanding of the United States and the world.

Name: *Eiman Ahmad Salama El-Bishbeishi.*

Title: *Molecular and serological Diagnosis of Dengue Virus.*

This thesis has been approved by:

1. Professor Dr. Kouka Saad El-Din Abdel-Wahab
Professor of Virology
Faculty of Medicine for Girls
Al Azhar University

2. Professor Dr. Sohair Abd Al Aziz Mostafa
Professor of Microbiology
Botany Department
Woman's College
Ain Shams University

3. Dr. Rifky Mohammed Al -Karamany
Virology Consultant
Biomedical Research Center
Cairo

Head of Botany and Microbiology
Department

Professor Dr. Sohair Abd Al Aziz

ARABIC SUMMARY

ARABIC ABSTRACT

LIST OF TABLES

- Table 1:** Classification of viruses into families based on chemical and physical properties
- Table 2:** Major Arthropod-Borne Viral Zoonoses
- Table 3:** Members of the Flaviviridae
- Table 4:** Classification of dengue viruses into -genotypes
- Table 5:** Clinical grades of dengue hemorrhagic fever.
- Table 6 :** Prevalence of IgG antibodies against dengue viruses 1, 2, 3 and 4 in sera from various age groups of feverish Kuwaitis
- Table 7:** Prevalence of IgG antibodies against Dengue viruses 1,2,3 and 4 in sera from various age groups of Expatriates, Feverish Patients.
- Table 8:** Dengue antibody seroprevalence rates of feverish Expatriates resident in Kuwait according to their nationals
- Table 9:** Prevalence of IgM antibodies against dengue viruses 1, 2, 3, and 4 in sera from various age groups of feverish Kuwaiti patients.
- Table 10:** Prevalence of IgM antibodies against Dengue viruses 1, 2, 3, and 4 in sera from various age groups of feverish Expatriates.
- Table 11:** Prevalence of IgM antibodies against dengue viruses 1, 2, 3 and 4 in sera from various groups of feverish Kuwaiti travelers

Table 12: Prevalence of IgM antibodies against Dengue viruses 1, 2, 3 and 4 in sera from various groups of feverish Expatriates

Table 13: The prevalence of IgM and IgG Dengue antibodies in sera from feverish patients admitted to Kuwaiti Hospitals:- Comparison of Results by different methods.

Table 14: The prevalence of IgG antibodies against Dengue viruses 1,2,3 and 4 in sera from various age groups of healthy expatriates, workers.

Table 15: Level of TNF- α in the culture supernatant (CS) of DV infected human PBL.

Table 16: Level of IFN- γ in the culture supernatant (CS) of DV infected human PBL.

Table 17: Level of IL-2 in the culture supernatant (CS) of DV infected human PBL.

Table 18: Level of IL-6 in the culture supernatant (CS) of DV infected human PBL.

Table 19: Level of IL-4 in the culture supernatant (CS) of DV infected human PBL.

Table 20: Level of IL-5 in the culture supernatant (CS) of DV infected human PBL.

Table 21: Level of IL-10 in the culture supernatant (CS) of DV infected human PBL.

LIST OF FIGURES

- Fig. 1:** Shapes and relative sizes of animal viruses of families that include human pathogens in some diagrams certain internal structures of the particles are represented
- Fig. 2:** Transmission cycles of two flaviviruses, yellow fever and dengue viruses
- Fig. 3:** Steps required for flavivirus infection and transmission by an arthropod.
- Fig. 4:** Transmission cycles of Dengue Virus
- Fig. 5:** World distribution map of dengue and *A. aegypti* in 1998
- Fig. 6:** Immunopathological mechanisms underlying the pathogenesis of dengue hemorrhagic fever.
- Fig. 7:** Inside view of PanBio Dengue Rapid Test.
- Fig 8:** The reactive control and non reactive control for dot blot IgG ELISA. Positive and negative samples were shown on the work sheet.
- Fig 9:** The reactive control and non reactive control for dot blot IgM ELISA. Positive and negative samples were shown on the work sheet.
- Fig. 10:** Panbio Dengue Rapid Test Device showing the result obtained with serum taken from the patients with secondary dengue virus infection
- Fig 11:** PanBio Dengue Rapid Test Device showing the result obtained with serum taken from a patient with primary dengue virus infection
- Fig 12:** PanBio Dengue Rapid Test Device showing the result obtained with serum taken from a patient with no dengue infection..
- Fig 13:** Agarose gel analysis of the DNA product from RT-PCR of Dengue virus.

Fig. 14: Agarose gel analysis of DNA product from RT-PCR of the control primers are designed from the human β actin mRNA gene and produce a 661-bp lane 2. Lane 1-shows M.W. 123 bp. Lane 3 control negative

Fig 15: Prevalence of IgG antibodies against dengue viruses 1,2,3, and 4 in sera from various age groups of resident (Bedwins and Travelers Kuwaitis). Sera were tested by dot blot ELISA.

Fig 16: Prevalence of IgG antibodies against dengue viruses 1,2,3 and 4 in sera from various group of feverish expatriates. Sera were tested by a dot-blot ELISA.

Fig 17: Comparison of the prevalence of dengue IgG antibodies in sera from resident, Bedwins feverish travelers Kuwaitis and expatriates.

Fig 18: The distribution of percent of positivity according to regions.

Fig 19: Prevalence of IgM antibodies against dengue viruses 1,2,3 and 4 in sera from various age groups of feverish Kuwaitis. Sera were tested by dot -blot ELISA.

Fig 20: Prevalence of IgM antibodies against dengue viruses 1,2,3 and 4 in sera from various age groups of feverish expatriates. Sera were tested by dot-blot ELISA

Fig 21: Comparison of the prevalence of dengue IgM antibodies in sera from the Kuwaiti who traveled and expatriates. The sera were tested by dot blot ELISA

Fig 22: Prevalence of IgM antibodies against dengue viruses 1,2,3 and 4 in feverish sera from various groups of Kuwaitis travelers. Sera were tested by IgM capture ELISA.

Fig 23: Prevalence of IgM antibodies against dengue viruses 1,2,3 and 4 in sera from various groups of Expatriates feverish patients. Sera were tested by IgM capture ELISA.
