ELECTROCHEMICAL PROPERTIES OF SOME SOILS OF EGYPT IN RELATION TO MINERALOGICAL COMPOSITION

BY

MOHAMED SALAH KOTB
(B. Sc. Agric. Soil Science)

Cairo University , 2000

THESIS

Submitted to the Graduate Division in Partial Fulfilment of the

Requirements for the Degree of
Master Science

In

Agricultural Sciences
(Soils Science)

Faculty of Agriculture
Cairo University
Egypt

2006

Advisory Committee

Senior Supervisor
Prof. Dr. R.R.Shahin
Professor of Soil Chemistry ,
Soil Science Department ,
Faculty of Agricultural ,
Cairo University .

Assistant Supervisors

Dr. Y.A.Nasr
Associate Professor of
Soil Chemistry, Soil Science
Department, Faculty of
Agricultural, Cairo
University.

Dr. M.M.Abdel-Tawab
Associate Professor of
Soil Chemistry, Soil Science
Department, Faculty of
Agricultural, Cairo
University.

Name : Mohamed Salah Kotb Ramadan

Title : ELECTROCHEMICAL PROPERTIES OF SOME SOILS OF EGYPT IN RELATION TO MINERALOGICAL COMPOSITION

THESIS Submitted for the

Degree of Master

In

Agricultural Sciences
(Soils Science)

Thesis has been approved by :

Prof. Dr.

Prof. Dr.

Prof. Dr.

(committee in charge)

Date : / / 2006

ACKNOWLEDGEMENT

The author wishes to express his gratitude and sincere appreciation to Prof. Dr. Reda.R.Shahin, Soils Department, Faculty of Agriculture, Cairo University, for his kind supervision, advice, helpful criticism throughout the study and valuable guidance during the preparation of the manuscript.

Thanks are extended to Dr. Y.A.Nasr and M.M.Abdel-Tawab, Assistant Professors, Soils Department, Faculty of Agriculture, Cairo University for their supervision and kindly assistance.

LIST OF TABLES	
1- INTRODUCTION	1
2- REVIEW OF LITERATURE	2
2.1. Charge development in soil	2
2.1.1. Permanent charge	4
2.1.2. pH-Dependent	8
2.2. Charge balance of mineral surfaces :	14
2.3. Point of zero charge:	16
2.3.1. Definitions of points of zero charge:	16
2.3.2. Determination methods of points of zero charge:	18
2.3.2.1. Potentiometric titration curves:	19
2.3.2.2. Ion adsorption method:	20
2.3.2.3. Electrophoretic mobility	21
2.4 Factors affecting charge characteristic parameters in soils	21
2.4.1. Ionic strength and temperature	21
2.4.2. Mineralogical composition	23
2.4.3. Iron oxides	25
2.4.4. Organic matter content	26
2.5. P-oxyanion adsorption impact on charge characteristics:	27
3. MATERIALS AND METHODS	30
3.1. Materials	30
3.1.1. Soil sampling	30
3.1.2. Standard clay materials	30
3.1.3. Separation of soil clay fractions	30
3.2. Methods of analysis	32
3.2.1. Physical determinations	32

3.2.2. Chemical determinations	32
3.2.3. Mineralogical analysis	33
1- X-ray analysis	33
2- Determination of amorphous materials	33
3.2.4. Potentiometric titration curves	34
3.2.5. Ion – adsorption experiment	36
3.2.6. P-oxyanion adsorption isotherms	36
3.2.7. Cation exchange isotherms :	37
4- RESSULTS AND DISCUSSION	38
4.1. Distribution of amorphous materials in clay fractions:	38
4.2. Specific surface area of clay fractions:	38
4.3. Mineralogical composition of soil clay fractions:	40
4.4. Charge characteristics of soil clay separates :	50
4.4.1. Potentiometric titration curves:	50
(a) Reference clay material	52
(b) Soil clay fractions:	55
4.4.2. Ion adsorption curves:	65
4.5. Cation exchange isotherms of clay separates:	86
4.6. Phosphate adsorption isotherms of clay fractions:	105
4.7. Charge characteristics of P-saturated clay separates :	125
4.7.1. Potentiometric titrations of P-saturated clays :	125
4.7.2. The effect of P-oxyanion adsorption on potntiometric titration curves and their charge parameters :	135
4.7.3. Ion adsorption curves of P-saturated clays	145
