

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

وَمَا تَوْفِيقِي إِلَّا بِاللَّهِ عَلَيْهِ

تَوَكَّلْتُ وَإِلَيْهِ أُنِيبُ

(الآية ٨٨ سورة هود)

Acknowledgement

First of all thanks to ***God*** to whom I relate any success in achieving any work in my life.

I would like to express my deepest gratitude and appreciation to ***Prof. Dr. Ahmed Lotfy El-Daly***, Professor of Obstetrics & Gynecology, Faculty of Medicine, Cairo University, for his continuous guidance, and precious encouragement. I feel great honor to work under his supervision.

I am also greatly indebted to ***Prof. Dr. Gamal Gamal El-Din Youssef***, Professor of Obstetrics & Gynecology, Faculty of Medicine, Cairo University, for his faithful help, sincere guidance and constant support that facilitated the completion of this work.

My deepest appreciation and grateful thanks for ***Dr. Samah Sayed Aboul Gheit***, Assistant Professor of Obstetrics & Gynecology, Faculty of Medicine, Cairo University, for her great help and practical advice.

Finally I am thankful to ***my family*** for their support throughout my life and this work.

ORAL VERSUS VAGINAL ADMINISTRATION OF MISOPROSTOL IN MANAGEMENT OF EARLY PREGNANCY FAILURE

Key words:

Early pregnancy failure, Anembryonic gestation, Embryonic demise, Medical abortion, Misoprostol.

Abstract

Early pregnancy failure is a common phenomenon. Misoprostol has widely been used for medical abortion. The study involved 50 women divided into 2 groups; group 1: received 600µg single dose of misoprostol vaginally and group 2: received 200µg misoprostol orally/8 hrs for a maximum of 7 days. No significant differences were detected between the two groups regarding the complete miscarriage rate (76% vs 75%, respectively). Surgical evacuation was done in 12 women; two for severe bleeding, six for incomplete evacuation and four women for treatment failure on day seven.
