

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

بسم الله الرحمن الرحيم

" قالوا سبحانك لا علم لنا إلا ما علمتنا إنك أنت العليم الحكيم "

صدق الله العظيم

" الآية ٣٢ من سورة البقرة "

**The Role of Basic Fibroblast Growth Factor
(bFGF) on The Periodontium
of Irradiated Rats**

Thesis

Submitted to the Faculty of Oral and Dental Medicine – Cairo University
In Partial Fulfilment of the Requirements for
Master Degree in Oral Biology

BY

Mohamed Hamdy Sayed Mansy

B.D.S. Cairo University

Faculty of Oral and Dental Medicine

Cairo University

Ass. Prof. Dr. Rabab Tawfik Mubarak

Associate professor of Oral Biology

Oral Biology Department

Faculty of Oral and Dental Medicine

Cairo University

Dr. Gerges Attia Mehany

Lecturer of Radiation Oncology

Radiation Oncology Department

National Cancer Institute

Cairo University

Acknowledgment

*First of all, I want to thank **GOD** for giving me the strength, the effort and everything that helped me in accomplishing this thesis.*

*I am greatly honored to express my deepest gratitude to **Professor Dr. Safaa Ahmed Fathy Elmogy**, Professor of Oral Biology, Oral Biology Department, Faculty of Oral and Dental Medicine, Cairo University for her unlimited guidance, valuable advises and continuous encouragement.*

*I would like to express my deep thanks to **Ass. Prof. Dr. Rabab Tawfik Mubarak**, Associate professor of Oral Biology, Oral Biology Department, Faculty of Oral and Dental Medicine, Cairo University for her help, extensive effort and encouragement.*

*I would like to express my gratitude to **Dr. Gerges Attia Mehany**, Lecturer of Radiation oncology, Radiation Oncology Department, National Cancer Institute, Cairo University for his unlimited kindness and stimulating guidance.*

*All my Professors and colleagues at **Misr University for Science and Technology**, thank you for your endless support.*

Dedication

This work is dedicated to....

My father for his endless love and support,

My mother for her endless love and support,

My wife for her encouragement and understanding,

And last but not least my beloved sons Youssef & Noor

List of Figures

No.	Interpertation	Page
Figure 1	A photomicrograph showing the rats during irradiation	29
Figure 2	A photomicrograph showing the heads of the rats were in the centre	29
Figure3	A photomicrograph of control group showing the structure of the periodontium, PDL (a), alveolar bone (b), cementum (c) and interdental gingiva (d) (H&E X30)	31
Figure 4	A photomicrograph of control group showing the keratinized stratified squamous epithelium of the gingiva (a), non keratinized sulcular epithelium (b), the gingival fibers radiating from the cervical cementum to the lamina propria of the gingiva (c) (H&E X 200)	32
Figure 5	A photomicrograph of control group showing the different layer of gingival epithelium and C.T. papillae (H&E X 400)	32
Figure 6	A photomicrograph of control group showing the transeptal group (a), the alveolar crest group (b), the horizontal group (c) and the oblique group (d) of fibers of the PDL (H&E X 30)	33
Figure 7	A photomicrograph of control group showing cellular cementum with its cementocytes in their lacunae (a), apical group (b) of PDL fibers, alveolar bone with its osteocytes (c) and bone marrow spaces filled with blood (d) (H&E X 200)	33
Figure 8	A photomicrograph of control group showing the interradicular bone with interradicular fibers of PDL (a), acellular cementum (b) and alveolar bone containing numbers of bone marrow cavities (c) (H&E X 200)	34

Figure 9	A photomicrograph of control group showing cementocytes of the cellular cementum (a), fibroblasts of the PDL (b) and osteocytes of the alveolar bone (c). It is also demonstrated one of the Zucker-Kandle canals of the alveolar bone (d) (H&E X 400)	34
Figure 10	A photomicrograph of group 2 (irradiated group) at 1 week after irradiation, showing atrophied gingiva (a), loss of orientation of PDL fibers with loss of cells (b) and degenerative area in alveolar bone (c) (H&E X40)	38
Figure 11	A photomicrograph of group 2 (irradiated group) at 1 week after irradiation, showing disorientation of PDL fibers (a), Hawship's lacunae of osteoclasts (b) and complete loss of cells of the cementum. PDL and alveolar bone (H&E X200)	38
Figure 12	A photomicrograph of group 2 (irradiated group) at 2 weeks after irradiation, showing massive resorption in cementum & bone with formation of large cavities (a) and massive degeneration of PDL fibers (b) (H&E X40)	39
Figure 13	A photomicrograph of group 2 (irradiated group) at 2 weeks after irradiation, showing massive resorption in cementum & bone with formation of large cavities (a), massive degeneration of PDL fibers (b) and lacunae of cementoclasts (c) (H&E X200)	39
Figure 14	A photomicrograph of group 2 (irradiated group) at 3 weeks after irradiation, showing decreased sizes of cementum and alveolar bone degenerative cavities (H&E X40)	40
Figure 15	A photomicrograph of group 2 (irradiated group) at 3 weeks after irradiation, showing reattachment of PDL fibers to bone and cementum (H&E X200)	40
Figure 16	A photomicrograph of group 3 (received bFGF before irradiation) at 1 week after irradiation, showing sever degeneration of PDL fibers (a) and numerous degenerative cavities in cementum and	41

	bone (b) (H&E X40)	
Figure 17	A higher magnification of the previous photomicrograph (H&E X100)	41
Figure 18	A photomicrograph of group 3 (received bFGF before irradiation) at 2 weeks after irradiation, showing, decreased severity of cementum & bone resorption (a), reoriented PDL fibers (b) and bone marrow cavities contained marrow tissue (c) (H&E X40)	42
Figure 19	A photomicrograph of group 3 (received bFGF before irradiation) at 2 weeks after irradiation, showing, beginning of orientation of PDL fibers (a) and smaller degenerative cavities in cementum & bone (b) (H&E X200)	42
Figure 20	A photomicrograph of group 3 (received bFGF before irradiation) at 3 weeks after irradiation, showing marked decrease in the severity of cementum and bone resorption (a) and PDL fibers were reformed and reoriented (b) (H&E X40)	43
Figure 21	A photomicrograph of group 3 (received bFGF before irradiation) at 3 weeks after irradiation, showing marked decreased severity of cementum & bone resorption (a) and PDL fibers are reformed & reoriented again (b) (H&E X200)	43
Figure 22	A photomicrograph of group 4 (received bFGF after irradiation) at 1 week after irradiation, showing small degenerative cavities in cementum and alveolar bone (a), regeneration and reorientation of PDL fibers (b) and numerous marrow cavities containing marrow tissue (c) (H&E X40)	44
Figure 23	A photomicrograph of group 4 (received bFGF after irradiation) at 1 week after irradiation, showing small degenerative cavities in cementum and alveolar bone (a) and regeneration and reorientation of PDL fibers (b) (H&E X100)	44

Figure 24	A photomicrograph of group 4 (received bFGF after irradiation) at 2 weeks after irradiation, showing marked decrease in the severity of cementum & bone resorption (a) and PDL fibers were reformed & reoriented (b) (H&E X40)	45
Figure 25	A photomicrograph of group 4 (received bFGF after irradiation) at 2 weeks after irradiation, showing markedly decreased degenerative cavities of cementum & alveolar bone (a) and PDL fibers were reformed & reoriented (b) (H&E X100)	45
Figure 26	A photomicrograph of group 4 (received bFGF after irradiation) at 3 weeks after irradiation, showing well oriented PDL fibers (a), more decrease in sizes of cementum and bone degenerative cavities (b) and increased cementum formation (H&E X40)	46
Figure 27	A photomicrograph of group 4 (received bFGF after irradiation) at 3 weeks after irradiation, showing regeneration increased cellularity of cementum and PDL tissues (H&E X200)	46
Figure 28	A photomicrograph of control group showing proper architecture of all the supporting tissues and proper orientation of PDL fibers (Masson Trichrome X40)	47
Figure 29	A photomicrograph of group 2 (irradiated group) at 1 week after irradiation showing: degenerated and disoriented PDL fibers (a), increase of uncalcified tissues in cementum and alveolar bone (b) and some areas of newly calcified tissues in cementum and alveolar bone (c) (Masson Trichrome X40)	50
Figure 30	A photomicrograph of group 2 (irradiated group) at 1 week after irradiation showing: degenerated and disoriented in PDL fibers (a), increase of uncalcified tissues in cementum and alveolar bone (b) and some areas of newly formed calcified tissues in cementum and alveolar bone (c) (Masson Trichrome X100)	50

Figure 31	A photomicrograph of group 2 (irradiated group) at 2 weeks after irradiation, showing degenerated and disoriented PDL fibers orientation and more increase of uncalcified tissues in cementum and alveolar bone with minimal areas of newly calcified tissues (Masson TrichromeX40)	51
Figure 32	A photomicrograph of group 2 (irradiated group) at 3 weeks after irradiation, showing regeneration of PDL fibers (a) and increased areas of newly calcified tissues in cementum and alveolar bone (b) (Masson Trichrome X40)	51
Figure 33	A photomicrograph of group 3 (received bFGF before irradiation) at 1 week after irradiation, showing mild degenerated PDL fibers (a) and some areas of uncalcified tissues in cementum and alveolar bone (b) (Masson Trichrome X40)	52
Figure 34	A photomicrograph of group 3 (received bFGF before irradiation) at 2 weeks after irradiation, showing degenerated PDL fibers (a), increased areas of uncalcified tissues in cementum and alveolar bone with minimal areas of newly formed calcified tissues (b) (Masson Trichrome X40)	52
Figure 35	A higher magnification of the previous photomicrograph (Masson Trichrome X100)	53
Figure 36	A photomicrograph of group 3 (received bFGF before irradiation) at 3 weeks after irradiation, showing regeneration and reorientation of PDL fibers (a), increased areas of newly calcified tissues in cementum and alveolar bone (b) (Masson Trichrome X40)	53
Figure 37	A photomicrograph of group 4 (received bFGF after irradiation) at 1 week after irradiation showing regeneration and reorientation of PDL fibers (a), some areas of newly formed calcified tissues in alveolar bone (b) (Masson Trichrome X40)	54

Figure 38	A photomicrograph of group 4 (received bFGF after irradiation) at 2 weeks after irradiation, showing regeneration and reorientation of PDL (a) and increased areas of newly formed calcified tissues in cementum and alveolar bone (b) (Masson Trichrome X40)	54
Figure 39	A photomicrograph of group 4 (received bFGF after irradiation) at 3 weeks after irradiation, showing regeneration and proper orientation of PDL fibers and excessive formation of newly calcified tissues in cementum and alveolar bone (Masson Trichrome X40)	55
Figure 40	A photomicrograph of group 1 showing weak PAS +ve reaction for neutral MPS and weak +ve alcianophilic reaction for acidic MPS (PAS Alcian X40)	56
Figure 41	A photomicrograph of group 2 (irradiated group) at 1 week after irradiation, showing increased +ve alcianophilic reaction for acidic MPS in cementum and slight increased reactivity in PDL and bone (PAS Alcian X40)	59
Figure 42	A photomicrograph of group 2 (irradiated group) at 2 weeks after irradiation, showing slight decreased +ve alcianophilic reaction for acidic MPS in cementum and slight decreased PAS +ve reaction for neutral MPS in PDL and bone (PAS Alcian X40)	60
Figure 43	A photomicrograph of group 2 (irradiated group) at 3 weeks after irradiation, showing almost similar reactions to the control group (PAS Alcian X40)	60
Figure 44	A photomicrograph of group 3 (received bFGF before irradiation) at 1 week after irradiation, showing remarkable decreased +ve alcianophilic reaction for acidic MPS in cementum and bone and decreased PAS +ve reaction for neutral MPS in PDL (PAS Alcian X40)	61

Figure 45	A photomicrograph of group 3 (received bFGF before irradiation) at 2 weeks after irradiation, showing increased PAS +ve reaction for neutral MPS in cementum and PDL (PAS Alcian X40)	61
Figure 46	A photomicrograph of group 3 (received bFGF before irradiation) at 3 weeks after irradiation, showing increased PAS +ve reaction for neutral MPS in PDL and increased +ve alcianophilic reaction for acidic MPS in cementum and bone (PAS Alcian X40)	62
Figure 47	A photomicrograph of group 4 (received bFGF after irradiation) at 1 week after irradiation, showing almost similar reactions to the control group (PAS Alcian X40)	62
Figure 48	A photomicrograph of group 4 (received bFGF after irradiation) at 2 weeks after irradiation, showing noticeable decrease in PAS +ve reaction for neutral MPS in PDL and slight increased +ve alcianophilic reaction for acidic MPS in cementum and bone (PAS Alcian X40)	63
Figure 49	A photomicrograph of group 4 (received bFGF after irradiation) at 3 weeks after irradiation, showing increased PAS +ve reaction for neutral MPS in gingiva and PDL and no changes in +ve alcianophilic reaction for acidic MPS in the cementum and bone (PAS Alcian X40)	63
Figure 50	A photomicrograph of control group showing strong +ve reaction for DNA in cementum, PDL and alveolar bone (Feulgen X100)	64
Figure 51	A photomicrograph of group 2 (irradiated group) at 1 week after irradiation, showing marked decreased +ve reaction for DNA in PDL and cementum (Feulgen X200)	66
Figure 52	A photomicrograph of group 2 (irradiated group) at 2 weeks after irradiation, showing moderate decreased +ve reaction for DNA in cementum, PDL and alveolar bone (Feulgen X100)	67

Figure 53	A photomicrograph of group 2 (irradiated group) at 3 weeks after irradiation, showing slight increased +ve reaction for DNA in cementum, PDL and alveolar bone (Feulgen X100)	67
Figure 54	A photomicrograph of group 3 (received bFGF before irradiation) at 1 week after irradiation, showing slight increased +ve reaction for DNA in cementum, PDL and bone (Feulgen X100)	68
Figure 55	A photomicrograph of group 3 (received bFGF before irradiation) at 2 weeks after irradiation, showing marked decreased +ve reaction for DNA in cementum, PDL and bone (Feulgen X100)	68
Figure 56	A photomicrograph of group 3 (received bFGF before irradiation) at 3 weeks after irradiation, showing slight increased +ve reaction for DNA in all tissues (Feulgen X100)	69
Figure 57	A photomicrograph of group 4 (received bFGF after irradiation) at 1 week after irradiation, showing decreased of +ve reaction for DNA in cementum, PDL and bone (Feulgen X100)	69
Figure 58	A photomicrograph of group 4 (received bFGF after irradiation) at 2 weeks after irradiation, showing slight increased +ve reaction for DNA in cementum and PDL (Feulgen X100)	70
Figure 59	A photomicrograph of group 4 (received bFGF after irradiation) at 3 weeks after irradiation, showing slight increased +ve reaction for DNA in cementum and bone (Feulgen X100)	70
Figure 60	A photomicrograph of group 1 showing moderate alkaline phosphatase reactivity in tissues of the periodontium (Alkaline phosphatase X40)	71
Figure 61	A photomicrograph of group 2 (irradiated group) at 1 week after irradiation, showing weak alkaline phosphatase activity along the border between cementum and in the alveolar bone, and moderate alkaline phosphatase activity in the PDL (Alkaline phosphatase	73
