ROLE OF MULTISCLICE CT AND VIRTUAL CYSTOSCOPY VERSUS ULTRASOUND AND COLOR DOPPLER STUDY IN EVALUATION OF URINARY BLADDER NEOPLASMS

Thesis

Submitted for Partial Fulfillment of M.D. degree in *Radiodiagnosis*

By

Sameeh Shoukry Sobhey

M.B.; B.Ch., M.sc. in Radiodiagnosis
Faculty of medicine
Ain Shams university

Under Supervision of

Prof. Dr. Hanaa Abdel Kader Abdel Hamed

Professor of Radiodiagnosis
Faculty of medicine
Ain Shams University

Assis Prof. Dr. Rania Aly Maarouf

Assistant Professor of Radiodiagnosis Faculty of medicine Ain Shams University

Dr. Togan Taha Abdel Azez

Lecturer of Radiodiagnosis Faculty of Medicine Ain Shams University

Faculty of Medicine
Ain Shams University
2009

دور الاشعة المقطعية متعددة الشرائح و المنظار الافتراضي مقارنة بالموجات الصوتية والدوبلر الملون في تشخيص اورام المثانة

رسالة

مقدمة من الطبيب / سميح شكري صبحي توطئة للحصول علي درجة الدكتوراه في الاشعة التشخيصية

السادة المشرفون

الاستاذ الدكتور
هذاء عبد القادر عبد الحميد
استاذ الاشعة التشخيصية
كلية الطب- جامعة عين شمس

الدكتور رانيا علي معروف استاذ مساعد الاشعة التشخيصية كلية الطب- جامعة عين شمس

الدكتور توجان طه عبد العزيز مدرس الاشعة التشخيصية كلية الطب- جامعة عين شمس

كلية الطب جامعة عين شمس 2009

Acknowledgement

First and for most, thanks to God who have lightened my path to become a humble student of a noble profession, and granted me the ability to accomplish this work.

I would like to express my sincere thanks and deep gratitude to my supervisors Irof. Dr Hanaa Abdel Kadder Abdel Hameed Irofessor of Radiodiagnosis, Faculty of medicine, Ain Shams University, for her tremendous support that helped me through this work. I am deeply grateful for her more than words can ever express.

Also for Assistant Prof Dr. Rania Maroof, Assistant Professor of Radiodiagnosis, Faculty of medicine, Ain Shams University for her consideration and help.

And lastly Dr. Togan Taha Abdel Azez, Professor of Radiodiagnosis, Faculty of medicine, Ain Shams University for her valuable supply of literature, indescribable support and meticulous revision of this work.

I would like also to express my deep gratitude to my colleagues in radiology department in Aguza Police Authority hospital for their cooperation and continuous help

I would like also to thank all my family members for their support and encouragement.

CONTENTS OF THE STUDY

Contents	i
List of Figures	ii-viii
List of Tables	ix
List of Abbreviations	X
Introduction & aim of work	1-4
Anatomy of the bladder	5-25
Pathology of the urinary bladder neoplasms	26-68
Techniques of the virtual cystoscopy and Doppler ultrasound	69-105
Findings of the VC and US in bladder neoplasms	106-123
Subjects and methods	124-130
Results	131-144
Discussion	145-166
Cases Presentation	167- 216
Summary and conclusion	217-225
References	226-247
Arabic summary	248-249

LIST OF FIGURES

Figure No.	Title	Page
1	Median sagittal section of male pelvis	6
2	Male bladder	7
3	The peritoneum of the male pelvis	7
4	Median sagittal section of female pelvis	9
5	Sagittal section through the pelvis of a newly born male	10
	child	
6	Sagittal section through the pelvis of a newly born	10
	female child	
7	Anterior aspect of the interior of the urinary bladder	12
8	Dissection of the male bladder	14
9 a,b,c	Structure of the male bladder neck and trigone	16
10a,b	Normal ureterovesical junction and trigone	18
11 a	The arterial supply of male pelvis	20
11 b	The arterial supply of female pelvis	21
12	The veins of the right half of the male pelvis	22
13	Lymphatic drainage of the urinary bladder	24
14	Gross picture of leiomyoma	29
15	leiomyoma microscopic picture	29
16	microscopy of Neurofibroma	30
17	Mic. picture of Pheochromocytoma	31
18	Gross picture of Pheochromocytoma	31
19	Von Brunn's nests	43
20	Normal squamous epithelium	45
21	Moderately severe squamous metaplasia	45
22	Severe squamous metaplasia	45
23	Non Keratinizing squamous metaplasia mic picture	46

24	keratinizing squamous metaplasia	47
25	Bladder Urothelial Carcinoma	49
26	Bladder Urothelial Carcinoma	5349
27	Papillary carcinoma of the bladder	50
28	Squamous cell carcinoma	52
29	Angiosarcoma mic picture	56
30	Mic picture of Leiomyosarcoma	57
31	Illustration of the definitions of primary tumor	62
32	T3 tumor in the female with invasion of the bladder neck	64
33	T4 tumor in the female with invasion to other adjacent organs	64
34	stages of tumor invasion in bladder cancer	65
35	N1 is defined as metastasis in a single lymph node, 2 cm or	66
	less in greatest dimension	
36 a,b	Lymph nodes staging	66
37 a,b	Lymph nodes staging	67
38 a	Image post processing. The figures demonstrate the	81
	reconstructed images using MPR	
38 b	Image post processing. The figures demonstrate the	81
	reconstructed images using CPR; note that the visualization	
	of the ureter is facilitated	
38 c	Image post processing. The figures demonstrate the	82
	reconstructed images using MIP	
38 d	Image post processing. The figures demonstrate the	83
	reconstructed images using SSD	
39	Volume-rendered coronal image	85
40	Bladder trabeculation by virtual cystoscopy	94
41 a,b,c,d	Images of urothelial carcinoma	95,96
42 a	Axial image of MDCT	96
42 b	Virtual image, Virtual images, threshold of 190 HU	97
42 c	Virtual image, threshold of 100 HU	97
43 a	False-positive finding of lesion in virtual cystoscopy	99

43 b	Retrospective evaluation of this multidetector helical CT	99
	source image	
44	Motion artifact	100
45 a,b,c	Squamous cell carcinoma	107
46 a,b	Cystitis glandularis in axial CT and virtual cystoscopy	108
47 a,b	normal bladder axial CT and virtual cystoscopy	109
48 a,b	Bladder carcinoma by virtual cystoscopy	110
49 a,b	Urothelial carcinoma in axial CT and virtual cystoscopy	110
50 a,b	transitional cell carcinomas in bladder in axial CT and	111
	virtual cystoscopy	
51 a,b	A mass extending into a bladder diverticulum in axial CT	111
	and virtual cystoscopy	
52 a,b	A 4-mm polypoid lesion in axial CT and virtual	112
	cystoscopy	
53 a,b	transitional cell carcinoma in bladder in axial CT and	112
	virtual cystoscopy	
54 a,b	Recurrent bladder carcinoma in axial CT and virtual	113
	cystoscopy	
55 a,b	Transitional cell carcinoma of the bladder in axial CT	114
	and virtual cystoscopy	
56 a,b	Urothilial carcinoma on the left bladder wall in axial CT	115
	and virtual cystoscopy	
57 a,b	Transitional cell carcinoma seen toward the left wall	115
	shows polypoid lesion in axial CT and virtual cystoscopy	
58 a,b	an area of wall thickening involving the left lateral wall of the	116
	bladder in axial CT and virtual cystoscopy	
59a,b	Enlarged median lobe of the prostate gland	117
60 a,b	Urothelial carcinoma in the posterior vesical wall in axial	118
	CT and virtual cystoscopy	
61a,b	Pseudo lesion that mimics a polypoid lesion in axial CT	119

	and virtual cystoscopy	
62 a,b	A low-grade papillary carcinoma, with punctate calcifications	120
	arising from the left trigone in axial CT and virtual cystoscopy	
63 a,b	Calcified polypoid lesion in axial CT and virtual cystoscopy	120
63 c	Conventional cystoscopic image depicts a solid tumor	120
64	ultrasound examination of the bladder showing postero-lateral	121
	soft tissue lesion revealed to be transitional cell carcinoma	
65	ultrasound examination of the bladder showing right lateral	122
	soft tissue lesions	
66	Color Doppler examination of a bladder mass revealed	122
	internal vascularity	
67	Number of patients in relation to age	133
68	Male to female ratio	133
69	number and localization of the lesions at virtual images	140
70	number and localization of the lesions by ultrasound	140
71	number and localization of the lesions by conventional	141
	cystoscopy	
72	number of enhanced lesions by Doppler in comparison to size	143
73a	US image with a left postero-lateral polyp	173
73b	Colour Doppler study showing no enhancement	173
73c	Another Colour Doppler study showing no enhancement	174
73d	Coronal reconstruction CT image with a left postero-lateral	174
	wall small polyp	
73e	Sagittal reconstruction CT image with a left postero-lateral	175
	wall small polyp	
73f	Axial reconstruction CT image with a left postero-lateral wall	175
	small polyp	
73g	virtual CT image with a left postero-lateral wall polyp	176
73h	Another virtual CT image with a left postero-lateral wall polyp	176
74a	axial CT image in supine position with an anterior wall small	178
	polyp	
74b	virtual CT image with an anterior wall small polyp	178

75a	Ultrasound image showing a small polyp at the right lateral	180
	wall of the bladder	
75b	Ultrasound image showing a small polyp at the base of the	180
	bladder	
75c	No internal vascularity on power Doppler study	181
75d	Axial CT image in supine position with right lateral wall small	181
	polyp	
75e	virtual CT image with right lateral wall small polyp	182
75f	Another virtual CT image with right lateral wall small polyp	182
76a	Ultrasound image showing a small polyp at the right lateral	184
	wall of the bladder	
76b	Internal feeding vessels at the base of the polyp on colour	184
	Doppler study	
76c	Axial CT image in supine position with right lateral wall small	185
	polyp	
76d	Virtual CT image with right lateral wall small polyp	185
77a	Ultrasound image showing an anterior wall polyp	187
77b	Axial CT image in supine position with anterior wall polyp	187
77c	virtual CT image with anterior wall polyp	188
78a	ultrasound image showing left postero-lateral wall polyp	190
78b	minimal vascularity on colour Doppler study	190
78c	axial CT image in supine position with left postero-lateral wall	191
	polyp	
78d	virtual CT image with left postero-lateral wall polyp	191
79a	Ultrasound image showing a hypoechoic lesion seen at the left	193
	lateral wall of the bladder	
79b	Axial CT image in prone position with polypoid mass at the	193
	left lateral wall of the bladder	
79c	Axial CT image in supine position with polypoid mass at the	194
	left lateral wall of the bladder	
79d	Virtual CT image with polypoid mass at the left lateral wall of	194
	the bladder	

the bladder 80a ultrasound image showing left postero-lateral wall thickening 80b internal vascularity on colour Doppler study 80c axial CT image in supine position with left postero-lateral wall thickening 80d virtual CT image with left postero-lateral wall thickening 80e virtual CT image with left postero-lateral wall thickening 81a Ultrasound image showing posterior wall mass lesion 81b internal vascularity on colour Doppler study 81c axial CT image in supine position with posterior wall mass 82d virtual CT image with posterior wall mass 82d Ultrasound image showing an irregular surfaces hypoechoic Lesion seen at the right postero-lateral bladder wall 82b Internal feeding vessels on colour Doppler study 82c Axial CT image in supine position with cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero-lateral wall of the bladder 83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 210 84c Axial CT image in supine position with a mass at the right lateral wall of the bladder	79e	Virtual CT image with polypoid mass at the left lateral wall of	195
80b internal vascularity on colour Doppler study 80c axial CT image in supine position with left postero-lateral wall thickening 80d virtual CT image with left postero-lateral wall thickening 80e virtual CT image with left postero-lateral wall thickening 81a Ultrasound image showing posterior wall mass lesion 81b internal vascularity on colour Doppler study 81c axial CT image in supine position with posterior wall mass 202 81d virtual CT image with posterior wall mass 202 82a Ultrasound image showing an irregular surfaces hypoechoic Lesion seen at the right postero-lateral bladder wall 82b Internal feeding vessels on colour Doppler study 82c Axial CT image in supine position with cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero-lateral wall of the bladder 83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 207 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 208 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 210 84c Axial CT image in supine position with a mass at the right		the bladder	
80c axial CT image in supine position with left postero-lateral wall thickening 80d virtual CT image with left postero-lateral wall thickening 80e virtual CT image with left postero-lateral wall thickening 81a Ultrasound image showing posterior wall mass lesion 81b internal vascularity on colour Doppler study 81c axial CT image in supine position with posterior wall mass 81d virtual CT image with posterior wall mass 820 82a Ultrasound image showing an irregular surfaces hypoechoic Lesion seen at the right postero-lateral bladder wall 82b Internal feeding vessels on colour Doppler study 82c Axial CT image in supine position with cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero-lateral wall of the bladder 83d Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 210 84c Axial CT image in supine position with a mass at the right	80a	ultrasound image showing left postero-lateral wall thickening	197
thickening 80d virtual CT image with left postero-lateral wall thickening 80e virtual CT image with left postero-lateral wall thickening 81a Ultrasound image showing posterior wall mass lesion 81b internal vascularity on colour Doppler study 81c axial CT image in supine position with posterior wall mass 202 81d virtual CT image with posterior wall mass 202 82a Ultrasound image showing an irregular surfaces hypoechoic Lesion seen at the right postero-lateral bladder wall 82b Internal feeding vessels on colour Doppler study 82c Axial CT image in supine position with cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero-lateral wall of the bladder 83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 83d Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 210 84c Axial CT image in supine position with a mass at the right 211	80b	internal vascularity on colour Doppler study	197
80d virtual CT image with left postero-lateral wall thickening 80e virtual CT image with left postero-lateral wall thickening 81a Ultrasound image showing posterior wall mass lesion 81b internal vascularity on colour Doppler study 81c axial CT image in supine position with posterior wall mass 202 81d virtual CT image with posterior wall mass 202 82a Ultrasound image showing an irregular surfaces hypoechoic Lesion seen at the right postero-lateral bladder wall 82b Internal feeding vessels on colour Doppler study 82c Axial CT image in supine position with cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero- lateral wall of the bladder 83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 207 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 208 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 210 84c Axial CT image in supine position with a mass at the right 211	80c	axial CT image in supine position with left postero-lateral wall	198
80e virtual CT image with left postero-lateral wall thickening 81a Ultrasound image showing posterior wall mass lesion 201 81b internal vascularity on colour Doppler study 201 81c axial CT image in supine position with posterior wall mass 202 81d virtual CT image with posterior wall mass 202 82a Ultrasound image showing an irregular surfaces hypoechoic Lesion seen at the right postero-lateral bladder wall 82b Internal feeding vessels on colour Doppler study 204 82c Axial CT image in supine position with cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero- lateral wall of the bladder 83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 207 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 208 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 210 84c Axial CT image in supine position with a mass at the right 211		thickening	
81a Ultrasound image showing posterior wall mass lesion 81b internal vascularity on colour Doppler study 81c axial CT image in supine position with posterior wall mass 81d virtual CT image with posterior wall mass 82d Ultrasound image showing an irregular surfaces hypoechoic Lesion seen at the right postero-lateral bladder wall 82b Internal feeding vessels on colour Doppler study 82c Axial CT image in supine position with cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero-lateral wall of the bladder 83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 83d Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 210 84c Axial CT image in supine position with a mass at the right 211	80d	virtual CT image with left postero-lateral wall thickening	198
81b internal vascularity on colour Doppler study 201 81c axial CT image in supine position with posterior wall mass 202 81d virtual CT image with posterior wall mass 202 82a Ultrasound image showing an irregular surfaces hypoechoic Lesion seen at the right postero-lateral bladder wall 82b Internal feeding vessels on colour Doppler study 204 82c Axial CT image in supine position with cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero-lateral wall of the bladder 83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 207 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 208 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 210 84c Axial CT image in supine position with a mass at the right 211	80e	virtual CT image with left postero-lateral wall thickening	199
81c axial CT image in supine position with posterior wall mass 202 81d virtual CT image with posterior wall mass 202 82a Ultrasound image showing an irregular surfaces hypoechoic Lesion seen at the right postero-lateral bladder wall 82b Internal feeding vessels on colour Doppler study 204 82c Axial CT image in supine position with cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero-lateral wall of the bladder 83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 207 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 208 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 210 84c Axial CT image in supine position with a mass at the right 211	81a	Ultrasound image showing posterior wall mass lesion	201
81d virtual CT image with posterior wall mass 202 82a Ultrasound image showing an irregular surfaces hypoechoic Lesion seen at the right postero-lateral bladder wall 82b Internal feeding vessels on colour Doppler study 204 82c Axial CT image in supine position with cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero-lateral wall of the bladder 83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 207 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 208 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 210 84c Axial CT image in supine position with a mass at the right 211	81b	internal vascularity on colour Doppler study	201
82a Ultrasound image showing an irregular surfaces hypoechoic Lesion seen at the right postero-lateral bladder wall 82b Internal feeding vessels on colour Doppler study 82c Axial CT image in supine position with cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero-lateral wall of the bladder 83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 210 84c Axial CT image in supine position with a mass at the right 211	81c	axial CT image in supine position with posterior wall mass	202
Lesion seen at the right postero-lateral bladder wall 82b	81d	virtual CT image with posterior wall mass	202
82b Internal feeding vessels on colour Doppler study 82c Axial CT image in supine position with cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero-lateral wall of the bladder 83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 207 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 210 84c Axial CT image in supine position with a mass at the right 211	82a	Ultrasound image showing an irregular surfaces hypoechoic	204
82c Axial CT image in supine position with cauliflower mass at the right postero-lateral wall of the bladder 82d Virtual CT image with a cauliflower mass at the right postero-lateral wall of the bladder 83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 84c Axial CT image in supine position with a mass at the right 211		Lesion seen at the right postero-lateral bladder wall	
the right postero-lateral wall of the bladder Virtual CT image with a cauliflower mass at the right postero-lateral wall of the bladder Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall Sab Internal exuberant vascularity on colour Doppler study Axial CT image in supine position with left lateral large soft tissue mass lesion Virtual CT image with left lateral large soft tissue mass lesion Virtual CT image with left lateral large soft tissue mass lesion Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder Internal vascularity on colour Doppler study Axial CT image in supine position with a mass at the right Axial CT image in supine position with a mass at the right	82b	Internal feeding vessels on colour Doppler study	204
82d Virtual CT image with a cauliflower mass at the right postero- lateral wall of the bladder 83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 210 84c Axial CT image in supine position with a mass at the right 211	82c	Axial CT image in supine position with cauliflower mass at	205
83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 84c Axial CT image in supine position with a mass at the right 211		the right postero-lateral wall of the bladder	
83a Ultrasound image showing a hypoechoic lesion seen at the left lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 84c Axial CT image in supine position with a mass at the right 211	82d	Virtual CT image with a cauliflower mass at the right postero-	205
lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 84c Axial CT image in supine position with a mass at the right 211		lateral wall of the bladder	
lateral bladder wall 83b Internal exuberant vascularity on colour Doppler study 83c Axial CT image in supine position with left lateral large soft tissue mass lesion 83d Virtual CT image with left lateral large soft tissue mass lesion 84a Ultrasound longitudinal scan image showing a hypoechoic lesion seen at the right lateral wall of the bladder 84b Internal vascularity on colour Doppler study 84c Axial CT image in supine position with a mass at the right 211	83a	Ultrasound image showing a hypoechoic lesion seen at the left	207

LIST OF ABBREVIATION

2D : Two dimensions

3D : Three dimensions

CC : conventional cystoscopy

CIS : carcinoma in situ

CT : Computed tomography

F+ve : False positive

F-ve : False negative

Fig. : Figure

HU : Hounsfield unit

IV : Intravenous

KVP : kilovolt peak

mAs : Milliampere per second

MDCT : Multidetector CT

MIP : maximum intensity projection

MPR : multiplaner reconstruction

MRI : Magnetic resonant imaging

MSCT : Multislice CT

No. : Number

SCC : Squamous cell carcinoma

TCC : Transitional cell carcinoma

TUR : Transurethral resection

US : Ultrasound

VC : Virtual cystoscopy

Introduction and aim of work

Cancer of the urinary bladder is one of the most common urothelial neoplasms. (*Raghavan D. et al 2008*)

It has high rates of recurrence at the initial tumor site and elsewhere throughout the transitional epithelium (30–80% of cases) and of multi-focal manifestations (as many as 50% of cases). Gross painless haematuria is the classic clinical sign of bladder carcinoma. (Cookson MS et al 2002)

Replacing invasive diagnostic procedures with non-invasive, sensitive and specific imaging techniques is a growing trend in medicine today. (*Karabacak O.R. et al 2011*)

Conventional cystoscopy plays a key role in the diagnosis and follow-up of bladder cancer. Virtual endoscopy is a minimally invasive technique that has promising results in the evaluation of the entire urinary tract. CT virtual cystoscopy has been proposed as an alternative imaging technique with potential advantages in the detection of urinary bladder neoplasms and has good patient acceptance. (*George C. et al* 2008)

It allows accurate localization of a lesion due to its wide field of view and depiction of extra-vesical anatomic landmarks. The size of a tumor is measured objectively, and virtual cystoscopy can be used to monitor treatment response in

a patient with a non-resectable tumor. Patients with a severe ureteral stricture or marked prostatic hypertrophy, who may be poor candidates for conventional cystoscopy, can safely undergo CT cystoscopy. (*Gualdi GF et al 1999*)

Virtual CT cystoscopy is a promising technique to be used in the detection of bladder lesions. In the future, it may be possible or even advantageous to incorporate it into the imaging algorithm for evaluation of bladder lesion. (*Arslan H. et al* 2006)

The recent introduction of virtual endoscopy adds to the imaging armamentarium for use in bladder evaluation. The volumetric data obtained with multi-slice CT imaging are computer-rendered to generate three-dimensional images, and with commercially available software, intra-luminal navigation through any hollow viscous is possible. Of the different three-dimensional rendering techniques available, perspective volume rendering provides the most information because the entire data set is incorporated. (*Calhoun PS et al (1999*)

Multi-detector row CT is the most recent advance in CT technology. An increased number of detector rows and more powerful x-ray tubes result in faster scanning time, increased volume coverage, and improved spatial and temporal resolution. MDCT (multi-detector computed tomography) technology allows superior image quality, decreased
