ACKNOWLEDGEMENT

I would like to thank all those whose deed made the completion of this work possible.

I wish to express my profound indebtedness to *Prof. Dr. Mohamed Ali El-Sayed* professor of urology Menoufia University for his invaluable advice and constant supervision.

I would like to convey my sincere gratitude to *Prof. Dr. Abd El-Reheem Hegazy* professor of urology Cairo University for his continuous guidance, objective criticism and encouragement.

I am very grateful to *Prof. Dr. Seif El-Deen El-Kateb* professor of urology Cairo University for his great help and precious advice throughout this study.

Thanks are also due to *Dr. Sherif Salah El-Deen Soliman* lecturer of urology Menoufia University who have spent untiring efforts with me in preparing, writing and revising this manuscript. He has spent long hours of his valuable time helping me for which I am deeply indebted.

I acknowledge the help which I received from *Prof. Dr. Shoukry Nassef* the head of urology dept. Menoufia University. I am deeply indebted to his fathering care and kindness.

This work could not have been possible without the kind permission of *Prof. Dr. El-Sayed Hessien* professor and chief of urology dept. Menoufia University. For this, thanks and deep appreciation are due.

I wouldn't forget to thank all members and staff of El-Kateb Hospital and urology department Menoufia University.

LIST OF CONTENTS

	pages
Introduction and aim of the work	1
Part I :	
<i>Review of literature</i>	2
I. Anatomy of the ureter	2
II. Historical development of ESWL	9
III. Historical development of ureteroscopy	13
IV. Physical basis for ESWL and Technology of lithotriptors	15
V. Instrumentation and Techniques of ureteroscopy	36
VI. ESWL anaesthesia and treatment Techniques	59
VII. Ureteral calculi composition and fragility	83
VIII. Bioeffects and complications of ESWL	91
IX. Complications and post - ureteroscopy course and care	102
Part II :	
I. Patients and methods	109
II. Results	136
III. Discussion	153
IV. Representative cases	160
Part III :	
Summary	168
Part IV :	
References	172
Part V :	
Arabic summary	194
Part VI :	
Appendix	200

LIST OF TABLES

<i>No. of tables</i>	<i>Pages</i>
1. History of ESWL	12
2. Comparison of Technology of various shock waves lithotriptors	29
3. Classification of endoscopic lithotripsy devices	
by mechanism of action	58
4. Frequency of various types of stones	88
5. The number of patients in each group in relation to the stone site	110
6. Age distribution	112
7. Number of patients regarding sex distribution in each group	112
8. Clinical presentation	114
9. Frequency of blood pressure in the groups studied	114
10. Frequency of stone laterality in the stuided groups	116
11. Frequency of stone side in the stuided groups	116
12. Frequency of stone site in the stuided groups	117
13. Frequency of stone number in the stuided groups	117
14. Frequency of stone nature in the stuided groups	117
15. Frequency of stone opacity in the stuided groups	117
16. Frequency of stone type in the stuided groups	120
17 . Description of stone size in the stuided groups	120
18. State of the right kidney by I.V.U.	122
19. State of the left kidney by I.V.U.	122
20. Frequency of previous managment before inclusion in the study	125
21. Technique of ureteroscopy	128
22. Frequency of pre - ESWL manipulated cases	131
23. Frequency anaesthesia in the ESWL group	131
24. Frequency of localization of the stone	133
25. The average of K.V, treatment duration, X- ray duration in every session in relation to the stone site	134

26. Comparison between the mean number of shocks in every session	134
27. Frequency of hospital stay in both groups	136
28. Frequency of ureteroscopic success using different modalities in relation to stone site	137
29. Causes of failure in ureteroscopic group	138
30. Complications of ureteroscopy	138
31. Subsequent management for stones and complications	140
32. Mean number of K.V, treatment duration, X- ray exposure, number of shock in each session in relation to the stone site	141
33. K.V in relation to stone type in each session	141
34. Immediate put in each session	142
35. Immediate put after first session in relation to the stone site	143
36. Immediate put after second session in relation to the stone site	143
37. Immediate put after third session in relation to the stone site	145
38. Complications of ESWL	145
39. Post - ESWL management	147
40. Rate of success in relation to the stone site in each group	149
41. The mean stone size in the successful cases in each group	149
42. Rate of success in relation to the stone type in each group	151

LIST OF FIGURES

<i>No. of fig.</i>	<i>Pages</i>
1. Narrowings of ureter (normal constrictions of the ureter)	6
2. Schematic description of stone destruction	16
3. Different forms of elastic waves	18
4. Shock wave generation nad focusing	22
5. X-ray localization in HM3 by two tubes	25
6. Single overhead X-ray tube of Medstone lithotripter	25
7. Range of indications for fluoroscopic and ultrasound stone localization	27
8. Yashiyoda machine	32
9. Ureteroscope with direct and sidearm viewing systems	39
10. General ureteral dilator sheathing system	39
11. Use of metal dilators for ureteral dilatation	42
12. Guided ureteral dilatation	45
13. Insertion of the ureteroscope	47
14. Ultrasonic lithotripsy	51
15. Electrohydraulic ureterolithotripsy	53
16. Schematic diagram of the lithoclast hand piece and probe	55
17. Schematic diagram of the EMI probe	57
18. Different parts of the ureter from ESWL point of view	62
19. Supine position for upper ureter with some flexion at the back	68
20. Prone position for ESWL for presacral ureteric calculi	73
21. Semisetting position for distal ureter	76
22. Positioning technique for ESWI of distal ureteral calculi (supine position)	77
23. Stone fragility and stone composition	86
24. Number of patients in each group in relation to the stone site	111
25. Sex distribution in each group	113
26. Clinical presentation	115
