

Faculty of Science
Chemistry Department

A study on the Removal of Heavy Metal Ions from the Groundwater using some Magnetic Nanocomposite Materials

A Submitted Thesis in Partial Fulfillment for the
Requirements of Ph. D. Degree

**In
Analytical Chemistry**

Presented by

Eman Al-Tohamy Motawea

Ms. Sc. in Analytical-Chemistry (2010)

Supervised by

Prof. Dr. Mostafa M.H. Khalil

Professor of Inorganic and Analytical
Chemistry, Faculty of Science
Ain Shams University

Prof. Dr. Yasser M. Moustafa

Professor of Organic Chemistry
Department of Analysis and Evaluation
Egyptian Petroleum Research Institute

Dr. Al-Sayed A. Bakr

Researcher of Physical Chemistry
Department of Analysis and Evaluation
Egyptian Petroleum Research Institute

Prof. Dr. Mohamed M. Yehia

Professor of GeoChemistry
Central Analytical Laboratory
National Water Research Center

Faculty of Science
Chemistry Department

A Study on the Removal of Heavy Metal Ions from the Groundwater using some Magnetic Nanocomposite Materials

A Thesis Submitted by
Eman Al-Tohamy Motawea

For the Degree of Ph.D. of Science in
Analytical Chemistry

To

Department of Chemistry
Faculty of Science
Ain Shams University

2015

Faculty of Science
Chemistry Department

Approval Sheet

Name of candidate: **Eman Al-Tohamy Motawea**
Degree: Ph.D. Degree in Chemistry

**Thesis Title: A Study on the Removal of Heavy
Metal Ions from the Groundwater
using some Magnetic
Nanocomposite Materials**

This Thesis has **been approved by:**

- 1- Prof. Dr. Mostafa M.H. Khalil**
- 2- Prof. Dr. Yasser M. Moustafa**
- 3- Dr. Al-Sayed A. Bakr**
- 4- Prof. Dr. Mohamed M. Yehia**

Approval

Chairman of Chemistry Department

Prof. Dr. Hamed Ahmed Younis Derbalah

*First and last thanks to **Allah** who give
me the power to go forward in a way
illuminated with his merciful guidance.*

*I would like to express my thanks to **Prof. Dr. Mostafa M. H. Khalil**, Professor of Inorganic and Analytical Chemistry, Faculty of Science, Ain Shams University, for giving me the chance to be one of his students and for his generous advices and guidance,. His deep sense of appreciation and dedication to research has been a constant source of inspiration to me. He was always kind enough to follow up the progress of the work with keen interest.*

*With deep regards and profound respect, I avail this opportunity to express my deep gratitude and thanks to my supervisor **Prof. Dr. Yasser M. M. Moustafa**, Professor of organic Chemistry, Analysis and Evaluation Department, Egyptian Petroleum Research Institute, for giving me the chance to be one of his students, for guiding the plan lines of the thesis, supervising the practical work and revising the manuscript, also for generous advices, valuable discussions, which helped me greatly. His continuous help, encouragement, and guidance helped me all the time of research. He did not only guide this work and find time to discuss with me but also gave me the confidence to express my ideas freely.*

*I would like to express my thanks to **Dr. Al-Sayed M. A. Bakr** Researcher of physical Chemistry, Analysis and Evaluation Department, Egyptian Petroleum Research Institute, for his suggesting the title and plan lines of the thesis, encouragements, supervising the practical work, for helping and revising the manuscript.*

*I am so grateful to **Prof. Dr. Mohamed M. M. Yehia** Professor of Chemistry, Central Analytical Laboratory, National Water Research Center, for his supervising in this thesis.*

I am thankful to all staff members and colleagues, in Central Analytical Lab, Egyptian Petroleum Research Institute for their support and appreciated help.

I would also like to thank SigmaXL Inc., for providing a complimentary license of Response Surface Methodology software.

I would be nowhere without the support of my family. “Thank You” is an understatement when it comes to what they have done, and still are doing, for me. I’d like to thank my, Dad, Mom, sister and brother for pushing me to always try to be better.

Aim of the work	
Abstract	xviii

Chapter I: Introduction & Literature Survey

I.1. General introduction to groundwater	1
I.2. Adsorption of heavy metals by nano-metal oxides.	6
I.3. Adsorption of heavy metals by magnetic nanocomposite.	11
I.4. Algenic acid as a natural biopolymer adsorbent	13
I.5. Adsorption of Fe^{2+} from water.	17
I.6. Adsorption of Mn^{+2} from water	22
I.7. Adsorption of Cu^{+2} from water	24
I.8. Theoretical background of adsorption processes	27
I.8.1 Adsorption kinetics	29
I.8.2 Adsorption isotherm	31
I.8.3 Adsorption thermodynamics	34
I.9. Optimization by response surface methodology	36

Chapter II: Experimental

II.1. Materials	39
II.2. Preparations	40
II.2.1. Preparation of magnetite nanoparticles (Nano- Fe_3O_4)	40

II.2.2. Preparation of nickel ferrite nanoparticles (Nano-NiFe ₂ O ₄)	41
II.2.3. Preparation of magnetite-alginate nanocomposite beads and nickel ferrite-alginate nanocomposite beads	43
II.2.4. Preparation of calcium-alginate beads	45
II.3. Structural characterization	47
II.3.1. X-Ray diffraction analysis (XRD)	47
II.3.2. Transmission electron microscope (TEM)	47
II.3.3. Dynamic light scattering spectroscopy (DLS)	47
II.3.4. Scanning electron microscope (SEM)	48
II.3.5. Fourier transform infrared spectroscopy (FT-IR)	48
II.3.6. Vibrating sample magnetometer (VSM)	48
II.3.7. Thermal gravimetric analyses (TGA)	49
II.3.8. Atomic absorption spectroscopy (AAS)	49
II.4. Adsorption experiments	49
II.4.1. Adsorption kinetic study	50
II.4.2. Adsorption isotherm study	51
II.4.3. Adsorption thermodynamic study	51
II.4.4. Design of experiments	52
II.5. Area of investigation	53

Chapter III: Results & discussion

III.1. Structural characterization	55
III.1.1. X-Ray Diffraction analysis (XRD)	55
III.1.1.1. Ca-alginate, Fe ₃ O ₄ -alginate nanocomposite and Fe ₃ O ₄	55
III.1.1.2. NiFe ₂ O ₄ -alginate nanocomposite and NiFe ₂ O ₄	56
III.1.2. Transmission Electron Microscope (TEM)	58

III.1.3. Dynamic light scattering spectroscopy (DLS)	59
III.1.4. Scanning Electron Microscope (SEM)	62
III.1.5. Fourier transform infrared spectroscopy (FT-IR)	64
III.1.5.1. Fe ₃ O ₄ , alginate and Fe ₃ O ₄ -alginate nanocomposite	64
III.1.5.2. NiFe ₂ O ₄ and NiFe ₂ O ₄ -alginate nanocomposite	66
III.1.6. Vibrating Sample Magnetometer (VSM)	68
III.1.6.1. Fe ₃ O ₄ and Fe ₃ O ₄ -alginate nanocomposite	68
III.1.6.2. NiFe ₂ O ₄ and NiFe ₂ O ₄ -alginate nanocomposite	70
III.1.7. Thermal gravimetric analysis (TGA)	72
III.1.7.1. Fe ₃ O ₄ , Fe ₃ O ₄ -alginate nanocomposite and alginate	72
III.1.7.2. NiFe ₂ O ₄ and NiFe ₂ O ₄ -alginate nanocomposite	73
III.2. Adsorption results	75
III.2.1. Adsorption of Fe ²⁺	75
III.2.1.1. Statistical analysis and analysis of variance (ANOVA) of models	82
III.2.1.2. Response surface plot of model factors and removal % of Fe ²⁺	94
III.2.1.2.1. Effect of Solution pH	94
III.2.1.2.2. Effect of initial iron concentration	98
III.2.1.2.3. Effect of adsorbent dose	101
III.2.1.2.4. Effect of contact time	103
III.2.1.3. Optimum conditions for Fe ²⁺ removal	105
III.2.1.4. Kinetics and adsorption mechanism	106
III.2.1.5. Adsorption isotherm	115

III.2.1.6. Adsorption thermodynamic	121
III.2.2. Adsorption of Mn^{2+}	124
III.2.2.1. Statistical analysis and analysis of variance (ANOVA) of models	131
III.2.2.2. Response surface plot of model factors and removal % of Mn^{2+}	142
III.2.2.2.1. Effect of Solution pH	142
III.2.2.2.2. Effect of initial Mn^{2+} concentration	144
III.2.2.2.3. Effect of adsorbent dose	147
III.2.2.2.4. Effect of contact time	149
III.2.2.3. Optimum conditions for Mn^{2+} removal	151
III.2.2.4. Kinetics and adsorption mechanism	152
III.2.2.5. Adsorption isotherm	160
III.2.2.6. Adsorption thermodynamic	165
III.2.3. Adsorption of Cu^{2+}	168
III.2.3.1. Statistical analysis and analysis of variance (ANOVA) of models	175
III.2.3.2. Response surface plot of model factors and removal % of Cu^{2+}	186
III.2.3.2.1. Effect of Solution pH	186
III.2.3.2.2. Effect of initial iron concentration	189
III.2.3.2.3. Effect of adsorbent dosage	191
III.2.3.2.4. Effect of contact time	193
III.2.3.3. Optimum conditions for Cu^{2+} removal	196
III.2.3.4. Kinetics and adsorption mechanism	196
III.2.3.5. Adsorption isotherm	204
III.2.3.6. Adsorption thermodynamic	210
III.3. Application of real samples treatment	214
Summary and conclusion	220

LIST OF ABBREVIATIONS

NMOs	Nanosized metal oxides
NCs	Nanocomposites
HFO	Hydrated ferric oxide
MB	Methylene blue
MO	Methyl orange
MFN	Magnetic ferrite nanoparticle
WHO	world health organization
NQ	Natural Quartz
NB	Natural Bentonite
PIOMN	pectin–iron oxide magnetic nanocomposite
RSM	Response surface methodology
CCD	Central composite design
ANOVA	Analysis of variance
TEM	Transmission electron microscope
SEM	Scanning electron microscope
DLS	Dynamic light scattering spectroscopy
VSM	Vibrating sample magnetometer
