THE UNIVERSITY OF HELWAN
FACULTY OF APPLIED ARTS
TEXTILE DEPARTMENT

A THESIS ENTITLED

**"Compatibility of new Egyptian
cotton / polyester blends and its
influence on the physical
properties of the produced yarn,
and its ability to alkali
treatment according to its
functional performance."**

Presented to obtain ph.D degree

By

**Eng./ SUZAN HOSSANY SAND
Researcher Assistant at Cotton
Research Institute
Agricultural Research Center**

SUPERVISORS

**Prof. Dr. Ahmed Ali Salman
Spinning and weaving of
Faculty of Applied Arts**

**Prof. Dr. Nafisa Taha
Head of spinning research
of Cotton Research Inst.**

**Prof. Dr. Mamdouh El- Hossamy
Printing, dyeing and finishing
Faculty of Applied Arts**

B.
2012

2001

**TO MY
DEAR FAMILY**

ACKNOWLEDGEMENTS

Deepest gratitude and thanks to **Prof. Dr. Mamdouh El-Hosamy**, Dyeing and Printing Dep., Fac. of App. Arts, for suggesting the present work line of this research, careful guidance, helpful discussion and keen interest through this work.

Thanks and appreciation is owed to **Prof. Dr., Ahmed Ali-Salman**, Head of the textile Weaving and Spinning Dep., Faculty of Applied Arts, for his sincere guidance, continues supervision and valuable help in evaluation and presentation of this research.

Great thanks are expressed to **Prof. Dr. Nafisa Taha**, Cotton Res. Inst., for her helpful discussion, keen interest and facilities offered throughout this work.

Thanks are due to **Dr. Mohamed Abd Elrahman**, Cotton Res. Inst., for his sincere assistance, encouragement and useful facilities provided throughout this research.

Thanks are due to also **Eng. Abdalla Faraoon**, Cotton Res. Inst., for his kind help, cooperation and facilities offered throughout this work.

Thanks are due to **Prof. Dr. Hassan**, Dyeing Dep., Egypt comp. Spin and weave.(Mehalla El-Kobra) for his useful and sincere assistance and valuable discussion.

Deepest thanks are also extended to the staff and fellow colleagues of Cotton Res. Inst. for their kind help, cooperation and facilities provided throughout this work.

CONTENT

CHAPTER I :	Page
GENERAL PART	
1-Cotton	(1)
1-1. Structure cotton fibers	(2)
1-2. Morphological structure of cellulose	(2)
1-3. Reactivity of cellulose	(3)
1-4. New varieties of Egyptian cotton	(3)
1-4.1. Giza 86 variety	(4)
1-4.2. Giza 89 variety	(4)
1-4.3. Giza 87 variety	(4)
1-4.4. Giza 88 variety	(5)
1-5. Polyester fibers	(12)
1-5.1. Physical structure	(12-13)
1-6. Polyester / cotton blended fabrics	(14-16)
1-7. Spinning system	(17-18)
1-7.1. Comparison between open-end and ring spun yarns	(18-20)
1-7.2. Effect of twist factor and spinning system on yarn properties.	(21-23)
1-8. Alkali hydrolysis of polyester	(23-29)
1-9. Alkali treatment of polyester/cotton blends	(30)
1-10. Alkali treatment of cotton	(30-32)
1-11. Aim of the present work	(33)

CHAPTER II

MATERIAL AND EXPERIMENTAL TECHNIQUES

2.1. Material	(34-35)
2.2. Substrates	(35)
2-2.1. Ring spinning system	(35)
2-2.2. Open end spinning system	(35)
2-3. Chemicals	(36)
2-4. Treatment processes	(36)
2-4.1. washing of knitting samples	(36)
2-4.2. Alkali treatment	(37)

2-5 Dyeing processes	(37)
2-5.1. Dyeing of polyester	(37)
2-5.2. Dyeing of cotton	(37)
2-6. Testing processes	(38)
2-6-1 Estimation of tensile strength and elongation	(38)
2-6-2 Estimation of yarn irregularity	(38)
2-6-3 Estimation of yarn appearance	(38)
2-6.4 Color measurements	(39)
2-6-5 Scanning electron microscopy	(39)
2-7. Statistical procedures	(39)

CHAPTER III :

RESULTS AND DISCUSSION

3-1. Introduction.	(40-41)
3-2. Effect of spinning system on yarn properties.	(50-51)
3-3. Scanning electron micrographs open-end and ring spun on yarn structure	(54)
3-4. Effect of blend ratio on yarn properties.	(56-57)
3-5. Relationship between blend ratio and spinning system on yarn properties.	(62)
3-6. Relationship between twist factor and spinning system on yarn properties.	(85-86)
3-7. Effect of alkali treatment on the dye uptake(K/S) of cotton varieties and its blends of spinning system	(99-100)
3-8. Scanning electron microscopy of alkali treatment	(105)
3-9. Functional performance of cotton / polyester fabrics	(112)

SUMMARY	(113-116)
REFERENCES	(117-124)
ARABIC SUMMARY	(6—1)

LIST OF TABLES AND FIGURES

	Page
- figures (1 - 9) properties of new varieties of Egyptian cotton.	(6-10)
- table (1) properties of cotton fibers.	(11)
- table (2) properties of polyester fibers.	(13)
- table (3) cotton fiber properties of the studied varieties.	(34)
- table (3) polyester fiber properties of the studied.	(35)
- tables (5 - 8) The effect of blend ratio, twist factor and spinning system on yarn properties of G86, G89, G87and G88 respectively.	(42-49)
- table (9,10) & figures (10 , 11): Effect of spinning system on yarn properties.	(52-53)
- figures (12 , 13): Scanning electron micrographs open-end and ring spun on yarn structure.	(55)
- tables (11-14) & figures (14 -17) : Effect of blend ratio on yarn properties.	(58-61)
- tables (15 , 16) & figures (18-37) : Relationship between blend ratio and spinning system on yarn properties and the regression equations and correlation coefficients between blend ratio and yarn properties of different spinning systems .	(63-84)
- tables (17 , 18) & figures (38 – 49): Relationship between twist factor and spinning system on yarn properties and the egression equations and correlation coefficients between twist factor and yarn properties of different spinning systems.	(87-98)
- tables (19 – 22) & figures (50 – 53): Effect of alkali treatment on the dye uptake (K/S).	(101-104)
- figures (54 - 64) : Scanning electron microscopy of alkali treatment.	(106-111)
