Genetic Improvement of Insect-Pathogenic *Photorhabdus* Bacteria

Thesis

Submitted for the Degree of Ph.D. in Microbiology

By

Shimaa Mahmoud Abdel-Hamid Salem Ghazal

B.Sc. in Microbiology (2001)

M.Sc. in Microbiology (2009)

Supervised by

Dr.

Mohamed A. A. Abou-Zeid

Prof. of Microbiology

Microbiology Dept.

Faculty of Science

Ain Shams University, Cairo, Egypt.

Dr.

Kamal M. A. Khalil

Prof. of Genetics

Genetics and Cytology Dept.

Genetic Engineering and Biotechnology

Division

National Research Center, Giza, Egypt.

Dr.

Louis S. Tisa

Prof. of Microbial physiology and
genomics

Dept. of Molecular, Cellular and
Biomedical Science

Collage of Life science and Agriculture

University of New Hampshire

Durham, NH, USA 03824

Dr.

Usamaa M. Badr

Researcher in Genetics

Genetics and Cytology Dept.

Genetic Engineering and Biotechnology

Division

National Research Center, Giza, Egypt.

Department of Microbiology

ACKNOWLEDGEMENT

In the name of Allah, the Most Gracious and the Most Merciful Alhamdulillah, all praises to Allah for endowing me with strength, patience, and knowledge to complete this thesis. I would never have been able to finish my dissertation without the guidance of my committee members, help from friends, and support from my family.

I would also like to thank my Advisor, **Prof. Dr. Mohamed A. M. Abou-Zeid** for the continuous support of my PhD study and related research, for his motivation and immense knowledge. His guidance helped me in all the time of research. I could not have imagined having a better advisor and mentor for my PhD study from my home University Ain Shams.

I would like to express my special appreciation and thanks to my advisor **Prof. Dr. Kamal M. A. Khalil**, you have been a tremendous mentor for me. Thank you for encouraging my research and for allowing me to grow as a research scientist, your advice on both research as well as on my career have been priceless. He helped me come up with the thesis topic and guided me over almost twelve years of development and during writing this thesis.

I would like to express my deepest gratitude and appreciation to my advisor, **Prof. Dr. Louis S. Tisa** for his excellent guidance, caring, patience, and providing me with an excellent atmosphere for doing my research. I cannot thank you enough for every min I spent in your lab, you gave me access to the laboratory and research facilities; even during the time I was not supported financially through the Egyptian mission. Without his precious support, it would not be possible to conduct this research, they way it looks today. My experience at UNH has been

nothing short of amazing. Since my first days at Dr. Tisa Lab, I have felt at home at UNH. Throughout more than three years as visitor scholar, I have been given unique opportunities and taken advantage of them.

I would like to thank **Prof. Dr. Mona Hussein** for helping me getting familiar with the nematodes and *Galleria*, answering my questions about them all the time and also her deepest prayers for me and my family. I also thank **Dr. Usama M. Badr** for his continues support and help.

Many thanks to my Lab colleagues at **Prof. Dr. Tisa Lab, UNH; Sheldon G. Hurst IV** and **Rediet Tamire** who have been so much helpful starting from my first day in Tisa Lab , answering my questions and help me get familiar with the lab and the techniques. I would also like to thank **Amy Michaud** not only for “always asking me if I need anything” but also for being my friend. I also would like to thank my colleagues at **applied microbial genetics lab** at National research center in Egypt for their support.

Special thanks go to the **sector of Egyptian missions in Cairo, Egypt** and **the Egyptian Cultural and Educational Bureau in Washington D.C.** for their financial support for two years in my PhD research.

A special thanks to my family. Words cannot express how grateful I am to my mother **Soad** for all of the sacrifices that you have made on my behalf. Your prayer for me was what sustained me thus far. My husband **Ahmed Alnazer**, I would not do this without your support, my little daughters **Arwa** and **Maram**, your presence in my life is priceless.

This thesis has not been previously submitted for any degree at this or any other university.

Signed

Shimaa Mahmoud A. S. Ghazal

III.1.1. Organisms used in this thesis.....	32
III.1.2. Primers.....	34
III.1.3. Media.....	35
III.1.4. Devices	40
III.1.5. Kits	41
III.1.6. Chemical solutions and Buffers.....	43
III.1.7. Software, programs and Databases.....	47
III.2. METHODS	49
III.2.1. Rearing of <i>G. Mellonella</i> and its infection by the EPN complex for the isolation of the nine wild types <i>Photorhabdus</i> sp.....	49
III.2.2. Differentiation between primary and secondary phases of the nine wild types <i>P. luminescence</i>	51

III.2.3. Biochemical, physiological and 16s rDNA characterization for wild type <i>P. luminescence</i> BA1.	54
III.2.4. Induction and selection of mutants using UV- irradiation, detection of symbiosis with axenic nematodes and presence of crystal proteins for some selected mutants	60
III.2.5. Draft Genome sequence of <i>P. luminescence</i> BA1.	65
III.2.6. Bioinformatics studies on <i>P. luminescens</i> BA1	69
III.2.7. Reverse Genetics....Generating a transposon mutant library of primary phase of <i>P. luminescens</i> BA1 by mini <i>Tn5</i> delivery vector pUB394	71
III.2.8. Fosmid library construction for <i>P. luminescens</i> BA1	87
IV. RESULTS.....	93
IV.1. Selection of the best <i>P. luminescens</i> wild isolate among the nine wild type strains	93
IV.1.1. Culture morphology, Bioluminescence and other biochemical differences between primary and secondary phase variants	93
IV.1.2. Determination of enzymatic and antimicrobial activities	99
IV.2. Characterization of <i>P. luminescens</i> BA1	103
IV.2.1. Physiological profile of <i>P. luminescence</i> BA1 ...	103
IV.2.2. 16s rDNA sequencing for <i>P. luminescens</i> BA1 ..	110

IV.3. Induction and selection of mutation using UV irradiation.....	113
IV.3.1. Induction of mutation by UV irradiation and selection of remarkable antimicrobial and variable enzymes producer mutants in <i>P. luminescens</i> Hb ...	113
IV.3.2. Induction of mutation by UV irradiation and selection of potent antimicrobial and variable enzymes producer mutants in <i>P. luminescens</i> BA1	119
IV.3.3. Effect of mutants on nematode (<i>Heterorhabditis bacteriophora</i>) propagation and feeding.....	126
IV.3.4. <i>CipA</i> and <i>cipB</i> PCR for the Hb and BA1 UV mutants.....	127
IV.4. Genomes of <i>P. luminescens</i> BA1, TTO1, HP88 and Hm and <i>P. temperata</i> Meg1 and NC19	129
IV.4.1. <i>P. luminescens</i> BA1 draft genome sequence	129
IV.4.2. <i>P. luminescens</i> Hp88 draft genome sequence.....	132
IV.4.3. <i>P. luminescens</i> Hm draft genome sequence	132
IV.4.4. <i>P. temperata</i> Meg1 draft genome sequence.....	133
IV.4.5. <i>P. temperata</i> NC19 draft genome sequence.....	134
IV.4.6. <i>P. luminescens</i> TTO1 draft genome sequence	134
IV.5 Proteomic comparisons among the five <i>Photorhabdus</i> strains	137
IV.6. Bioinformatics studies on <i>P. luminescens</i> BA1	139

IV.6.1. Reciprocal BLAST analysis using Venn diagram	139
IV.6.2. Phylogeny of <i>P. luminescens</i> BA1 based on Recombinase A (<i>recA</i>) gene analysis.....	141
IV.6.3. Phylogeny of the <i>P. luminescens</i> BA1 genomes based on whole genome annotation	143
IV.6.4. Analysis of <i>P. luminescens</i> BA1 secondary metabolome.....	145
IV.7. Reverse Genetics....Transposon Mutant Library of <i>P.</i> <i>luminescens</i> BA1	148
IV.7.1. Calculation of the transformation efficiency	150
IV.7.2. Plasmid Isolation from some selected BA1 transformants.....	151
IV.7.3. Generating a transposon mutagenesis library	151
IV.7.4. Screening of mutants' library for alteration of physiological activity	154
IV.7.5. BA1 Draft PCR analysis for the suspected knock out gene in the transposon mutants	193
IV.8. Forward Genetics ... fosmid library construction for <i>P.</i> <i>luminescens</i> BA1	196
IV.8.1. Screening of the fosmid library for hemolysis activity	198
IV.8.2. <i>In vitro</i> pathogenesis for the fosmid clones hemolysis mutants	199
