B1.V.7

Cairo University
Institute of African Research And Studies
Department of Natural Resources

The Natural Cooling Systems
An Approach For Improving The Thermal
Performance Of Buildings In North Africa

By

Consultant / *Yehia Hassan Wazeri*

B.Sc. (Architecture), Cairo Univ., 1982

A Thesis

Submitted for Ph. D. degree of African Studies

In Atmospheric Resources

Supervised by

Dr. Fawzia Ibrahim Moursy

Prof. of Physical Meteorology.
Head, Dept. Of Natural Res.
Inst. Of African Research & Studies
Cairo University

Dr. Hamdy Sadek Ahmed

Lecturer
Dept. of Arch.
Faculty of Eng.
Helwan University

2001

ACKNOWLEDGMENTS

The authoress is deeply indebted to Dr. Fawzia Ibrahim Moursy, Prof. Of Physical Meteorology, Head, Dept. of Natural Resources, Inst. of African Research and Studies, Cairo University, and Dr. Hamdy Sadek Ahmed, Lecturer, Dept. of Arch., Faculty of Eng., Helwan university, for their supervision, helpful suggestion of this research point and kind advice throughout preparation of thesis manuscript.

List of Tables	-6
List of Figures	-4
List of Photos	0
1-INTRODUCTION	2
2-REVIEW OF LITERATURE	6
2-1 Climatic Characteristics of North Africa	6
2-2- Heat Flow Patterns	13
2-3- Defining The Passive Systems	14
2-4- Classifications of Passive Cooling Systems	16
2-4-1- Convective Cooling	17
2-4-2- Radiant Cooling	22
2-4-3- Evaporative Cooling	29
2-4-3-1- Direct Evaporative Cooling	29
2-4-3-2- Indirect Evaporative Cooling	36
2-4-4- Conductive Cooling	42
2-5- Cooling of Attached outdoor spaces and courtyards	45

	Page
2-5-1- Courtyard as a passive cooling mean in buildings	47
2-5-2- Some design features of the Courtyard	52
3- MATERIALS AND METHODS	56
3-1-Measurements	56
3-1-1- The wind catchers measurements	58
3-1-2-The outdoor space (sunken courtyard) measurements	66
3-2-Equations	68
3-2-1- The cooling tower equations	68
3-2-1-1- Model of Cunningham and Thompson tower	68
3-2-1-2- Model of the Inertial “shower” cooling tower	69
3-2-1-3- The cooling efficiency of the evaporative cooling tower	70
3-2-1-4- The indoor temperature of a building cooled by a cooling tower.....	70
3-2-2- The courtyard equations	71
3-2-2-1- Computer program equations	71
3-2-2-2-Determination of the air temperature of the courtyard cooled by a cooling tower	73
4-RESULTS AND DISCUSSIONS	76
4-1-Evaluating and improving the thermal performance of wind catchers	76
4-1-1-Evaluating the thermal performance of wind catchers	76
4-1-2-Improving the thermal performance of wind catchers by using the direct evaporative cooling system	76
4-1-3-Controlling the relative humidity of exit air temperature	83

4-1-4- A comparison between measured and calculated exit air temperature	87
4-1-5-Proposals for improving the performance of wind catchers	90
4-2- Evaluating and improving the thermal performance of a sunken courtyard	93
4-2-1- Evaluating the thermal performance of the sunken courtyard	93
4-2-2- Improving the thermal performance of the sunken courtyard by using the direct evaporative cooling system	95
4-3-Evaluating the thermal performance of evaporative cooling towers in “ Toshka “	98
4-3-1- Analysis of parameter affecting Cunningham and Thompson cooling tower	98
4-3-1-1-Effect of changing the evaporative surface area on indoor air temperature	98
4-3-1-2-Effect of changing the tower height on indoor air temperature	99
4-3-2- Analysis of parameter affecting the evaporative “ Shower “ cooling tower	102
4-3-2-1-Effect of changing the water flow rate on exit air temperature	102
4-3-2-2-Effect of changing the shower head height on exit air temperature	102
4-3-3- A comparison between the performance of Cuningham & Thompson cooling tower and the “ Shower “ cooling tower	103
4-4- Lowering the air temperature of courtyards (in Toshka)	110
4-4-1-Minimizing the cooling needs of the courtyard	110
4-4-2- Lowering the air temperature of courtyards by using cooling towers	115
5-CONCLUSION	123

ARABIC SUMMARY	

LIST OF TABLES

Table No.		Page
1	Classification of climate based on temperature range and relative humidity _____	9
2	The technical data of the two instruments _____	56
3	The thermal performance of three wind catchers (Es-Sinnari house, Cultural garden and Commerce College) _____	77
4	The thermal performance of workshops wind catcher (Applied Arts College – Helwan University) _____	78
5	The effect of using the three-arm sprinkler on the thermal performance of workshops wind catcher _____	81
6	Effect of closing the sprinkler on exit air temperature and relative humidity _____	85
7	A comparison between measured and calculated exit air temperatures _____	88
8	The thermal performance of the sunken courtyard (in Helwan University) _____	93
9	The effect of using the three-arm sprinkler on the thermal performance of the sunken courtyard _____	97
10	Effect of changing the Cunningham & Thompson tower height and evaporative surface area on indoor air temperature on 21 June (in Toshka) _____	100
11	Effect of changing the shower head height and water flow rate on exit air temperature on 21 June (in Toshka) _____	104
12	A comparison between the performance of the Cunningham & Thompson cooling tower (evaporative surface area of 4m ²) and the “Shower” cooling tower (water flow rate of 20 l/min.) --	107
13	A comparison between the performance of the Cunningham & Thompson cooling tower (evaporative surface area of 2m ²) and the “Shower” cooling tower (water flow rate of 10 l/min.)--	108

Table		Page
No.		
14	Effect of changing the plan ratio of the basic model (1/1)-----	113
15	Effect of changing the height of model (1 /4) -----	114
16	Effect of changing the orientation of model (1 /4) -----	116
17	The effect of utilizing the cooling tower on courtyard indoor air temperature (on 21 June in Toshka) -----	120

LIST OF FIGURES

Fig. No.		Page
1	Africa according to Koppen's classification	7
2	Classification of Africa climate based on temperature range and relative humidity	10
3	A house in Algeria using a convective cooling system	18
4	A nighttime cooling system for multistory buildings using embedded air passage within the ceilings	20
5	Measured & calculated indoor maximum temperatures of low – mass building	21
6	Measured & calculated indoor maximum temperatures of high – mass building	21
7	Direct nocturnal cooling of the mass of the roof	24
8	Radiant cooling of a specialized radiator	24
9	Unglazed solar collectors functioning as a nocturnal radiator	25
10	Harold Hay's "Skytherm" system	27
11	Effect of radiator length on radiant cooling	28
12	Section through evaporative cooler used in Egypt	30
13	Cooling towers in some ancient civilization	30
14	Cunningham and Thompson's cooling tower	32
15	Performance of Cunningham and Thompson's cooling tower	32
16	Effect of evaporative surface area on indoor air temperature and airflow in occupied space	34
17	Effect of wind tower height on indoor air temperature and airflow in occupied space	35

Fig. No.		Page
18	“Al-Rahmanyah” mosque in “Skaka”-Saudi Arabia -----	37
19	Performance of “Al-Rahmanyah” mosque cooling towers ---	38
20	A comparison between the cooling efficiency of Al-Rahmanyah” mosque cooling towers and Cunningham & Thompson cooling tower-----	38
21	Roof ponds -----	39
22	Water sprayers -----	39
23	Heat balance of a building cooled by a roof pond -----	41
24	A scheme of roof pond with floating insulation -----	41
25	Earth tempering benefits may be captured through a variety of design approaches -----	44
26	A completely and a semi-subterranean compound in southeastern Tunisia -----	44
27	Using underground tunnels as a direct heat exchanger with soil -----	46
28	Thermal balance of wetted soil covered by a mulching layer-----	46
29	Thermal exchanges of the courtyard at day and night -----	49
30 (a,b)	Relationship between cooling effect and the degree of enclosure of the courtyard -----	50
31	Evaporative “shower” cooling tower-----	54
32	Calculated air temperature of a patio as a function of the solar heat load and the shower height -----	54
33	Section in Es-Sinnari house wind catcher -----	58
34	Cultural garden wind catcher -----	60
35	Commerce College building wind catcher -----	62
